- Defining theories is not a matter of arbitrary stipulation, nor of reporting fact. It is rather an interpretive construction. It must be arranged 1) so that theories are differentiated from kindred items such as practical norms and works of art; 2) so that they are brought under the relevant including kind, here communicative artifacts; 3) so that the elements involved in any instance are captured, here being an intellectual account and purporting to be true; and 4) so that subordinate variations are allowed. Whatever is taken to be a theory in the sense indicated is understood to report on the world with some contribution to knowledge. It follows that even the most minimal factual indications are systematic to a degree permitting communicative interpretation.

- SADOWSKY, James.** Transubstantiation And Scholastic Philosophy. *Proc Cath Phil Ass* 40,110-114 1966.
- SAGOFF, Mark.** On Preserving The Natural Environment. *Yale Law Journal* 84,205-267 1974.
- The article is in three parts: the first, "Animadversions on Legal Rights for Natural Things" is just that, namely, a rather toxic criticism of the rights-for-fauna thesis. The second, "America's Covenant with Nature Recognized," is a romantic, if not soupy, replaying of the idea-of-the-wilderness-in-America theme. The third, "A non-Utilitarian Rationale for Preserving the Wilderness" goes into the symbolic values of nature in a way which pretty much plagiarizes the views of Nelson Goodman or, at least, applies them to the environment.
- SAHAKIAN, Mabel Lewis and Sahakian, William S.** *Rousseau As Educator*. NY Twayne 1974.
- SAHAKIAN, Mabel and Sahakian, William S.** *John Locke*. Boston Twayne 1975.
- This essay is built around the central theme of John Locke's contributions to educational theory. It includes a brief, informative biographical sketch of his early career and various travels in Europe. Two chapters provide a general background for an understanding of Locke's philosophical orientation and his empirical analysis of human understanding. It is maintained that Locke's empiricism influenced the basic notions pervading an educational theory which is presented both in *The Correspondence of John Locke and Edward Clarke and Some Thoughts Concerning Education*. There is a succinct discussion of Locke's minor writings on education and a chapter dealing with the reactions and evaluations of Locke's key critics. Locke's faith in education is shown in this compilation of his direct and simplified comments upon the educational process and the aims of education.

- SALLIS, John.** *Being And Logos: The Way Of Platonic Dialogue*. Pittsburgh Duquesne Univ Pr 1975.
- This work presents a radical reinterpretation of six major Platonic dialogues: *Apology, Meno, Phaedrus, Cratylus, Republic, Sophist*. Special attention is given to the dramatic, provocative, and playful character of these dialogues. The principal questions which provide the structure of the work are those of the nature of philosophy, of logos, and of being. In relation to these questions the work undertakes a radical rethinking of most of the major themes of the Platonic dialogues, culminating in a new determination of the meaning of idea in the Platonic logos.
- SALLIS, John.** *Phenomenology And The Return To Beginnings*. NY Duquesne Univ Pr 1973.
- The critical and most radical of questions of philosophy is the question of philosophy itself, viz., what evokes philosophical thinking. Following the lead of Merleau-Ponty, who claimed that the end of philosophy is its beginning, Sallis puts to the reader the question of the origins of philosophical thinking. The movement of philosophy from its everyday activities to what conditions these daily activities is the movement by which philosophy returns to its roots, hence becoming radical. This movement is accomplished by asking the question of philosophy itself. The "concrete" phase of the book, in which Sallis philosophizes along with Merleau-Ponty's *Visible and Invisible* is excellent for its comments on Merleau-Ponty.

- SALMON, Merrilee H.** "Deductive" Versus "Inductive" Archaeology. *American Antiquity* 41,376-381 JI 76.
- Disagreements among archaeologists about whether inductive or deductive methods are appropriate for establishing archaeological hypotheses are often founded in a misunderstanding of the nature of inductive reasoning. In this paper several cases of confirmation of archaeological hypotheses are examined in order to expose the logical structure of the reasoning involved. In all these cases the structure is basically inductive. In actual practice the methodology adopted by archaeologists is far more sophisticated than the account of this methodology which is presented by archaeologists.
- SALMON, Merrilee H.** Confirmation And Explanation In Archaeology. *American Antiquity* 40,459-464 O 75.
- In recent discussions by archaeologists who are committed to the scientific nature of archaeology, philosophic commitment to an excessively narrow view of "the Scientific Method" is common. These narrow conceptions can be broadened, clarified, and made more adequate without diminishing a commitment to scientific archaeology. The hypothetico-deductive method of confirmation is an oversimplified account of scientific reasoning. There are severe limitations for its application, particularly in archaeology. The deductive-nomological model of scientific explanation likewise has serious drawbacks for explaining the sorts of phenomena which interest archaeologists. Understanding the problems with this model is hampered by trying to force systems models of explanation into the

deductive–nomological mold. Worse still, the separate issues of confirmation and explanation are not kept distinct.

SALMON, W C and Barker, S F and Kyburg Jr, H E. Symposium On Inductive Evidence. *Amer Phil Quart* 2,265–280. O 65.

This paper attempts to undermine the following dissolution argument: To be rational is to fashion one's beliefs according to the evidence—inductive evidence is one basic type of evidence—thus, there is no question as to whether it is rational to employ induction. The problem of justification thereby evaporates. The critique rests upon the fact that, to have a viable concept of evidence, we must choose from among a wide variety of possible rules. The problem of justification is the problem of justifying such choice. The paper criticizes Carnap's view that such choice must be based upon "inductive intuition."

SALMON, Wesley C. *Statistical Explanation And Statistical Relevance*. Pittsburgh Pittsburgh Univ Pr 1971.

This book contains three articles by Salmon, Richard Jeffrey, and James Greeno elaborating what Salmon dubs "the statistical–relevance" model of statistical explanation.

SALMON, Wesley C. *The Foundations Of Scientific Inference*. Pittsburgh Pittsburgh Univ Pr 1967.

This book consists of a brief but comprehensive survey of the problems of probability and induction. Hume's traditional problem of justification of induction is presented, and all major attempts at resolution are critically discussed. The elementary calculus of probability is given, along with philosophical criteria of adequacy for its interpretation. The classical, subjective, logical (inductive), personalist, and frequency (statistical) interpretations are presented and analyzed philosophically. The problem of confirmation of scientific hypotheses is discussed, and an objective bayesian approach is found to be most adequate.

SALMON, Wesley C. "Bayes's Theorem And The History Of Science" in *Historical And Philosophical Perspectives Of Science*, R H Stuewer (ed), 68–86. Minneapolis U1970.

This essay embodies an attempt to clarify relations between history of science and philosophy of science. First, the concepts, "context of discovery" and "context of justification," are clarified. Next, the simple hypothetico–deductive account of confirmation is shown inadequate; a Bayesian approach is considered more satisfactory. Appeal to Bayes's theorem reveals that "plausibility considerations" have a legitimate place in the context of justification. It suggests, finally, that historians who view scientific method in hypothetico–deductive terms run great risk of erroneous judgments regarding rational vs nonrational components of science—of confusing the contexts of discovery and justification.

SALMON, Wesley C. "Clocks And Simultaneity In Special Relativity, Or Which Twin Has The Time?" in *Motion And Time*, P Machamer And R Turnbull (eds), 508–545. Columbus Ohio State Univ Pr 1976.

This essay treats the concept of simultaneity in the special theory of relativity. Taking the "clock paradox" as a point of departure, it shows how this "paradox" can be enunciated and resolved totally within special relativity. While not rejecting the more usual resolutions within general relativity, it shows that no appeal to that theory is required, provided simultaneity relations in different reference frames are treated appropriately. The conventionality of simultaneity is discussed, including the question of factual vs conventional status of the one-way speed of light. Relations between the conventionality of simultaneity and the relativity of simultaneity are exhibited.

SALMON, Wesley C. "Confirmation And Relevance" in *Minnesota Studies In The Philosophy Of Science*, G Maxwell And R M Anderson, Jr (eds), 3–36. Minneapolis 1975.

This essay draws out the consequences of the distinction between two senses of "to confirm": the absolute sense which means "to render highly probable"; the relevance sense which means "to render more probable." The force of this distinction (which has been in the literature many years) has been insufficiently understood and appreciated. A variety of paradoxical–sounding features of the relevance sense (the more commonly used sense) are described. Analysis of the paradoxes shows that they arise from an important, and usually unappreciated, aspect of the probability concept upon which both senses of confirmation are based.

SALMON, Wesley C. "Inquiries Into The Foundations Of Science" in *Vistas In Science*, David Arm (ed), 1–24. Albuquerque Univ Of New Mex Pr 1968.

Directed primarily toward non–philosophers, this essay attempts to present and clarify basic logical issues concerning the confirmation and testing of scientific hypotheses. The role of plausibility arguments serves as a point of departure for comparison between the standard hypothetico–deductive schema and an approach using Bayes's theorem as the basic schema. The latter is found more satisfactory. The nature of prior probabilities is discussed from several standpoints: as *a priori* probabilities, as personal (subjective) probabilities, and as objective probabilities. The significance of the washing out of priors in the light of increasing test evidence is emphasized.

SALMON, Wesley C. "Logic" in *The Encyclopedia Americana*, 673–687. NY Americana 1972.

This article is a general survey of logic, primarily deductive, presupposing no previous knowledge of the subject. Basic concepts, e.g., argument, form, validity, induction, deduction, are explained. The historical development of logic is sketched. The main aspects of ancient syllogistic logic and Stoic propositional logic are given. Elements of modern symbolic, including truth tables, quantifiers, and relations are presented; first order logic is outlined. Higher order logic and set theory, including Russell's paradox, are briefly treated. Metatheory, including the distinction of syntax/semantics/pragmatics, is introduced, and the liar paradox is discussed. Some important metatheorems are mentioned.

SALMON, Wesley C. "Memory And Perception In Human Knowledge" in *Bertrand Russell's Philosophy*, G Nakhnikian (ed), 139–167. NY Barnes & Noble 1974.

This essay assesses the comparative epistemic merits of memory and perception as sources of basic empirical data. The main thesis is that they enjoy equal status. Noting Russell's remark that the general reliability of memory is an "independent postulate," but noting that Russell did not include any such postulate in his ultimate list, it argues that no such postulate is needed for memory or perception. The paper deals with various forms of the "immediacy objection"—the claim that perceptual data are to be preferred to memory data on grounds of immediacy. All forms of this objection are analyzed and rejected.

SALMON, Wesley C. "Russell On Scientific Inference, Or Will The Real Deductivist Please Stand Up" in *Bertrand Russell's Philosophy*, G Nakhnikian (ed), 183–208. NY Barnes & Noble 1974.

This essay analyzes and evaluates Russell's theory of nondemonstrative inference as stated in *Human Knowledge*. Careful examination reveals that Russell did not admit any form of nondemonstrative inference; nondemonstrative inferences are, for him, enthymemes. Instead of seeking rules of nondemonstrative inference, he seeks suitable premises to add to the enthymemes to make them into valid deductions. His logic is strictly deductive. Russell's views are put into historical perspective by comparison with those of Carnap, Popper, and Reichenbach. Striking similarities are found between Russell and Carnap; they provide complementary approaches to the same basic problems in the logic of science.

SALMON, Wesley C and Nakhnikian, George. "Exists" As A Predicate. *Phil Rev* 66,535–542. O 57.

Ayer, Broad, and Wisdom asserted that, if "exists" were a predicate, (1) all affirmative existential propositions would be tautologies and (2) all negative existential propositions would be contradictions. The arguments supporting these claims are analyzed and found to be fallacious. Moreover, these assertions are false. This is shown by constructing a first order monadic predicate calculus containing an existence predicate in which ordinary affirmative and negative existential propositions retain their contingent status. Within this logic, "All gods exist" is demonstrable, but "Some gods exist" is not; therefore, treating "exists" as a predicate does not validate the ontological argument.

SALMON, Wesley C. Barker's Theory Of The Absolute. *Phil Stud* 10,50–53. 1959.

This note analyzes a putative counterexample, advanced by S F Barker, to Carnap's criterion of significance. The analysis shows that Barker's "theory," after correction of minor technical flaws, satisfies Carnap's requirements, but it fails to constitute a counterexample because it has empirical content. This result is established by deducing patently observational consequences from the "theory."

SALMON, Wesley C. Confirmation. *Scientific American* 228,75–83. 1973.

This article discusses "puzzles" concerning confirmation of scientific hypotheses. Hempel's raven paradox and Goodman's grue–bleen paradox are mentioned. Greater emphasis is placed upon examples which undermine the crude hypothetico–deductive method and show the failure of transitivity of inductive support. Main emphasis is upon puzzles arising from a failure to appreciate the distinction between incremental confirmation (increasing the probability) and absolute confirmation (rendering highly probable). Duhem's problem arises with a vengeance in an example in which negative evidence deductively refutes the conjunction of hypothesis and auxiliary, but nevertheless confirms each of them individually.

SALMON, Wesley Charles (ed). *Zeno's Paradoxes*. Indianapolis Bobbs–Merrill 1970.

This volume contains essays on Zeno of Elea's paradoxes of motion and plurality by Bertrand Russell, Henri Bergson, Max Black, J O Wisdom, James Thomson, Paul Benacerraf, G E L Owen, and Adolf Grünbaum. The editor's Introduction presents the paradoxes, provides historical background, and introduces contemporary problems—e.g., "infinity machines," "supertasks," the composition of the line from points, spatio–temporal quantization. An Appendix on Sets and Infinity provides basic tools of set theory needed to understand the discussions.

SALMON, Wesley Charles. *Space, Time, And Motion: A Philosophical Introduction*. Encino CA Dickenson 1975.

This book is an excellent primer to the philosophy of space, time and motion. Chapter one sketches the conceptual development of geometry with its beginnings in Greek philosophy. Chapter two is concerned with Zeno's arguments against the reality of space, time, and motion. The chapter includes an elementary but clear discussion of instantaneous velocity, mathematical functions, the development of the differential calculus, measure theory and Cantor's point set theory. Chapter three is an illustrative "trip on Einstein's train" and introduces the reader to Einstein's special theory of relativity. Besides a discussion of the problem of distant simultaneity, the chapter includes a discussion of the so-called "time–dilation" phenomenon and the related "clock paradox." Chapter four continues with the clock paradox, formulating a version which does not involve any accelerations. The important distinction between the conventional and the factual components of Einstein's principle of the constancy of light velocity is the central topic of the chapter. Connected with this topic is also a discussion of the problematic existence of "tachyons" in the special theory.

SALMON, Wesley C. On Vindicating Induction. *Phil Sci* 30,252–261. J1 63.

This paper deals with the problem of vindicating a particular type of inductive rule, a rule to govern inferences from observed frequencies to limits of relative frequencies. Reichenbach's "rule of induction" is defended. By application of two conditions, (1) normalizing conditions and (2) a criterion of linguistic invariance, it is argued that alternative rules lead to contradiction. It is argued that the "rule of induction" does not lead to contradiction when suitable restrictions are placed upon predicates to which it is applied. Goodman's grue–bleen paradox is considered and a resolution

offered. Reichenbach's pragmatic argument then provides positive support for his inductive rule.

SALMON, Wesley C. Regular Rules Of Induction. *Phil Rev* 65,385-388 JI 56.

After formulating a "counter-inductive policy" (which no sensible person would adopt), Max Black had issued a challenge to "explain in convincing detail" why it should not be adopted. In this note I answer the challenge by showing that this policy involves an "irregular rule of induction," and that such rules are unsatisfactory because they lead to formal contradiction. In addition, it is shown that many rules of that type characterized by Reichenbach as "asymptotic" can be rejected on the same grounds.

SALMON, Wesley C. Reply To Henry E Kyburg's Discussion On "The Status Of Prior Probabilities In Statistical Explanation". *Phil Sci* 32,152-154 Ap 65.

SALMON, Wesley C. Reply To Pettijohn's "Salmon On 'The Short Run'". *Phil Sci* 23,150-152 Ap 56.

SALMON, Wesley C. Should We Attempt To Justify Induction? *Phil Stud* 8,33-48 1957.

This paper analyzes the most important arguments designed to show that a justification of induction is impossible, unnecessary, or both. Max Black's attacks upon pragmatic justifications are shown to be unfounded. P F Strawson's ordinary language dissolution is examined in the light of Herbert Feigl's distinction between two types of justification (validation/vindication); the dissolution fails because of a confusion between them. Black's attempt to construct "self-supporting" inductive arguments is undercut by exhibiting a parallel "self-supporting" argument for a "counter-inductive" rule. Attempts to justify induction, the article concludes, are neither futile nor superfluous.

SALMON, Wesley C. The Frequency Interpretation And Antecedent Probabilities. *Phil Stud* 4,44-48 1953.

A schematic attempt, using Bayes's theorem, shows how probabilities of scientific hypotheses can be construed as frequencies within the frequency interpretation of probability. Primary emphasis is placed upon interpretation of antecedent (or prior) probabilities.

SALMON, Wesley C. The Predictive Inference. *Phil Sci* 24,180-190 Ap 57.

A "predictive inference" is an inference from an observed sample of a population to an unobserved finite portion of the same population. Such inferences might be considered to proceed in two steps: an inference from the observed sample to the limiting frequency, and an inference from the limiting frequency to the unobserved "short run." It is shown that Reichenbach's pragmatic justification of induction (which applies to all "asymptotic rules") leaves inferences of the former type completely arbitrary, while an analogous pragmatic justification I had offered in "The Short Run" for rules of the latter type of inference admit an equal degree of arbitrariness.

SALMON, Wesley C. The Short Run. *Phil Sci* 22,214-221 JI 55.

The problem of the short run concerns the rationale for application of knowledge of long run probabilities to the short run, i.e., to a portion of a probability sequence. This is not the same as the problem of the single case. Even if the long run probability is known, and even if an appropriate probability (or weight) has been ascertained for the single case, there remains the problem of justifying the use of such probability knowledge in dealing with the short run. Several unsatisfactory approaches are considered. A pragmatic justification, somewhat analogous to Reichenbach's justification of induction, is offered as a suitable resolution.

SALMON, Wesley C. The Status Of Prior Probabilities In Statistical Explanation. *Phil Sci* 32,137-146 Ap 65.

This article explores difficulties encountered in attempting to construct an adequate model of statistical explanation. Focusing upon deep distinctions between deductive and inductive explanation, it emphasizes the role of prior probabilities in this context. It concludes with a recognition that statistical explanation must embody a relevance relation—an increase in probability as a result of the transition from the prior probability of the explanandum-event (assessed without reference to the explanatory facts) to the posterior probability (assessed in the light of the explanatory facts). This article is a precursor to later elaborations of a statistical-relevance model of explanation.

SALMON, Wesley C. The Uniformity Of Nature. *Phil Phenomenol Res* 14,39-48 S 53.

The principle of uniformity of nature has sometimes been invoked for the purpose of justifying induction. This principle cannot be established *a priori*, and in the absence of a justification of induction, it cannot be established *a posteriori*. There is no justification for assuming it as a postulate of science. Use of such a principle is, however, neither sufficient nor necessary for a justification of induction. In any plausible form, it is too weak for that purpose, and hence, it is insufficient. Since a justification which does not rely upon this principle can be given, it is not necessary.

SALMON, Wesley C. Use, Mention, And Linguistic Invariance. *Phil Stud* 17,13-18 1966.

This article presents a rationale for invoking the "criterion of linguistic invariance" as a principle for selecting suitable rules of inductive inference. According to this criterion, an inductive rule is unacceptable if it sanctions the drawing of two mutually inconsistent conclusions from two logically equivalent (consistent) sets of premises. A number of well-known methods violate this condition. The criterion has been attacked on the ground that, in certain circumstances, the way in which the data are formulated may affect the outcome of an experiment. The criterion is defended against such attacks by appealing to the use-mention distinction.

SALMON, Wesley C. What Happens In The Long Run? *Phil Rev* 74,373-378 JI 65.

Suppose that a game of heads and tails, involving infinitely many tosses of a coin with a probability of one-half for heads, could be played through to completion. How would a player fare who bet a dollar for heads on each toss? It is shown that, given only the constraint on the probability, the player may win an infinite amount, lose an infinite amount, experience gains and losses that fluctuate within finite

bounds, or experience gains and losses that fluctuate without finite bound. If a randomness assumption is added, it is shown that the last of these alternatives obtains. Under no circumstances can a player "come out even in the long run" in this "fair" game.

SALOMAA, Arto. A Theorem Concerning The Composition Of Functions Of Several Variables Ranging Over A Finite Set. *J Sym Log* 25,203-208 S 60.

SALOMON, Albert. *The Tyranny Of Progress, Reflections On The Origins Of Sociology*. NY Noonday Pr 1955.

"The nineteenth century was fascinated by progress," and especially the two French "Messianic Bohemians," Henri de Saint-Simon and Auguste Comte, who gave their remedy for the disorder of their times a totalitarian twist. They made "one fatal mistake: they placed their faith in the methods of natural science" with the result that, ironically, "the logic and tyranny of progress gave to the world the progress of total tyranny." They wished "to construct a brave new world of universal happiness" but by collective rather than individual action.

SALOMON, Albert. Jacob Burckhardt: Transcending History. *Phil Phenomenol Res* 6,225-269 D 45.

SALOMON, Louis B. *Semantics And Common Sense*. NY F, 1966.

Salomon begins by considering words, pointing out that the different terms available in a given language determine how one sees the world. In a chapter dealing with ambiguity and vagueness, he calls attention to words which are *polar opposites*. All language for describing the world ultimately rests on these undefinable terms. Salomon discusses five uses of language: the informative, interrogative, directive, expressive, and evocative. There is a long discussion of aesthetic meaning, in which Salomon deals with painting and music as well as verbal symbols. The book concludes by considering the difficulty of translating from one language into another.

SALOP, Arnold. Intensity As A Distinction Between Classical And Romantic Music. *J Aes Art Crit* 23,359-372 Spr 65.

SALVAN, Jacques L. *The Scandalous Ghost: Sartre's Existentialism As Related To Vitalism, Humanism, Mysticism, Marxism*. Detroit Wayne State Univ 1967.

Sartre's philosophy and other forms of existentialism, according to the author, "start from the situation of the thinking self in the Here and Now," whereas (1) vitalism starts with "the lowest biological forms" and traces life's progress from those forms "towards liberty"; (2) humanism starts with an immanent human nature; (3) "mysticism starts from the conception of Absolute Being"; and (4) Marxism, especially in its dialectical materialism, starts with matter and proceeds through physical, economic, and social causes to men, ideas, and society. The author states in his concluding chapter: "Rather than seeing existentialism narrowed down to a mere ideology, we would rather see it evolve into a wider philosophical synthesis." Included in the volume are an Interview with Sartre and an Appendix on existentialism and post-war art.

SAMAY, Sebastian. *Reason Revisited: The Philosophy Of Karl Jaspers*. Notre Dame Notre Dame Univ Pr 1971.

SAMBURSKY, S. *The Physical World Of Late Antiquity*. NY Basic Books 1962.

SAMBURSKY, S. A Democritean Metaphor In Plato's *Kratylos*. *Phronesis* 4,1-4 1959.

SAMBURSKY, Samuel. *Physics Of The Stoics*. NY Macmillan 1959.

From the meagre fragments available, Sambursky has carefully reconstructed the basic physical concepts of the Stoa, emphasizing the continuum theory developed by Chrysippos and Poseidonios. stoic physics, in contrast with Democritean atomism, has been largely neglected, in spite of its relevance to contemporary theories of continuity. Sambursky's contribution should overcome this omission to a great extent, and, together with Mates' and Lukasiewicz's work in Stoic logic, enable us to comprehend the non-ethical features of Stoic thought.

SAMBURSKY, S. Plato, Proclus, And The Limitations Of Science. *J Hist Phil* 3,1-12 Ap 65.

SAMEK, R A. *The Legal Point Of View*. NY Philosophical Lib 1974.

SAMPSON, R V. *Progress In The Age Of Reason: The Seventeenth Century To The Present Day*. Cambridge Harvard Univ Pr 1957.

This book is a study in important aspects of the history of an idea from the 17th century to the present. The author believes that the Enlightenment founded progress on a natural law open to the rational powers of man. Following the work of Hobbes, Rousseau and Hume, progress could be justified only by reducing it to the status of an historical or sociological law, as in Hegel, Marx and Toynbee.

SAMUEL, Herbert Louis. *In Search Of Reality*. NY Philosophical Lib 1957.

After a very active political life the statesman who wrote this book has done so under the influence of a strong belief in the practical importance of philosophy. Written in popular style it tries to weave together the strands of philosophy, science and religion. The scientific concept of matter is discussed and issue joined with leading scientists in defending the view not only that the scientific concepts of the ultimate particles must be taken as giving objectively true descriptions but that the real existence of either pervading space should be accepted. There are appendices of some fifty pages dealing chiefly with the views of scientists and including a letter from Einstein on the physicist's concept of matter.

- SANDIN, Robert T.** The Concept Of Reality And The Elimination Of Metaphysics. *Monist* 50,87-97 Ja 66.
The elimination of metaphysics by the philosophers of the Vienna circle was based on a dogmatic criterion of meaningfulness. With the decline of this dogma in recent years, anti-metaphysical philosophy has become quiescent. A new departure for a revised critique of metaphysics is suggested by the analysis of the concept of reality in the Uppsala school of the first half of the twentieth century. The burden of this critique is not to show that metaphysics is incompatible with empiricism, but to show through an analysis of the concept of reality that typical metaphysical propositions are nonsensical because self-contradictory. An anti-metaphysical argument employing this method is far more defensible than that of the Vienna positivists.

- SANTAS, Gerasimos.** Plato's *Protagoras* And Explanations Of Weakness. *Phil Rev* 75,3-33 Ja 66.
In the *Protagoras* Plato argues that the explanations commonly offered for the alleged fact that sometimes men act contrary to their knowledge of what is best when they can do otherwise are absurd. These explanations are that men act so because they are overcome by pleasure, pain, fear, love, passion. I examine Plato's argument in detail. I distinguish two senses of "overcome," one referring to the value estimates of the agent, the other to the *strength* of his "motives," and I construct a model of explanation for each sense. The first model is teleological; the second is not, and it is derived from models applied recently by psychologists to cases of "conflicting motives." Plato's argument is successful with the first model, but not with the second. But the second model seems to imply that the agent was under psychological compulsion.
- SANTAS, Gerasimos.** The Socratic Paradoxes. *Phil Rev* 73,147-164 Ap 64.
Santas argues that Plato's ethics has been widely misunderstood because of a mistaken reading of the Socratic paradoxes, i.e. the prudential paradox that no one desires what is bad for him, and the moral paradox that all who pursue what is unjust do so in ignorance. He argues that Plato does not deny the fact of moral weakness, and that his views about the relation between knowledge and action are far more plausible than commonly believed.

- SANTAYANA, George.** On The False Steps Of Philosophy (with Prefatory Note By Daniel Cory). *J Phil* 61,6-18 Ja 64.
These are some of the last thoughts of George Santayana, taking the form of two imaginary lectures. They are concerned to trace mistakes committed by philosophers in their treatments of notions of *matter* and *ideas*. Early Greek thinkers, prepossessed by dialectic, confused dialectic with natural science, hypostatizing ideal fragments as essences of matter. Mistakes have resulted also from a failure to distinguish, and to discern the implications of, idea as an incubus, idea as a process of state of mind, and idea as an essence.

- SANTAYANA, George.** The Unity And Beauty Of The World. *Rev Metaph* 19,425-440 Mr 66.
Originally entitled "Personality of God—Aesthetics—Optimism," this is the concluding chapter of Santayana's doctoral dissertation, *Lotze's System Of Philosophy* (1889). Santayana argues that in Lotze's system the unity of the world is a projected law of interaction, or a scheme of relations successively realized in conscious states, and that beauty is there the consciousness of a reconciliation between primitive facts, the law of interaction, and the cosmic purpose which that law serves. While thus interpreting the themes of unity and beauty in Lotze's thought, Santayana is led to comment on his views of consciousness and value.

Act-utilitarianism is defended as the ethical theory best able to do justice to our

- considered moral judgments. These judgments include support for conventional social norms which exclude as legitimate all appeals to utility, but it is argued that an act-utilitarian can embrace such norms without inconsistency while retaining the freedom to deviate from them under appropriate conditions. This version of act-utilitarianism is then explicated through a consideration of promise keeping, political obligation and civil disobedience, distributive and retributive justice, political liberty and personal freedom, the moral character and justification of law.

- SAUNDERS, Jason Lewis.** *Justus Lipsius: The Philosophy Of Renaissance Stoicism*. NY Liberal Arts Pr 1955.
- The sixteenth-century Flemish humanist Joest Lips is widely known as a historian and classical philologist, but this book is the only modern account of his philosophical system. It consists of an exposition rather than a critical analysis of the ethical and physical theories which Lipsius elaborated on the basis of the late Stoic philosophers of the Roman period. Very copious references to the ancient sources permit a comparison of the original Stoic doctrines with Lipsius' interpretation of them in accordance with the Christian view of man and the world. The book concludes with a detailed account of Lipsius' life and works, some observations on his friends and contemporaries, and regarding his influence on later thinkers included in the book.
- SAUNDERS, John Turk.** A Sea Fight Tomorrow? *Phil Rev* 67,367-378 Jl 58.
- SAUNDERS, John Turk** and Henze, Donald F. *The Private Language Problem: A Philosophical Dialogue*. NY Random House 1967.
- A distinction is made between 'Private Language/d1/r'—each word of which refers to experiential data, although each of these words is conceptually independent of publicly observable phenomena, and 'Private Language/d2/r'—a language that only the speaker/user (logically) can understand. A dialogue follows in which a traditionalist maintains that a PL/d1/r is possible and that a PL/d1/r is not necessarily a PL/d2/r. His Wittgensteinian assailant denies both claims. By denying the legitimacy of nonindependent checks and by insisting that it is impossible for someone who has no concept of persons to speak a pure-experience language, the Wittgensteinian succeeds in demolishing the idea of a private object (or PL/d1/r).
- SAUNDERS, John Turk.** Beliefs Which Are Grounds For Themselves. *Phil Stud* 16,88-90 1965.
- SAUNDERS, John Turk.** Does Knowledge Require Grounds? *Phil Stud* 17,7-12 1966.
- The author quarrels with an analysis offered by Norman Malcolm of the concept of knowledge (in the sense of "knowing that p"). Malcolm grants that p must be true and must be believed by S if S is to know that p. But Malcolm insists that S need not possess grounds for p. The author points out that "S has grounds for p" has two meanings: (i) that S knows that q and p follows from q, or (ii) that it is reasonable for S to believe p. He then argues that knowledge does logically require grounds, grounds in sense (ii) but not in sense (i).
- SAUNDERS, John Turk.** Fatalism And Ordinary Language. *J Phil* 62,211-222 Ap 65.
- Richard Taylor's brand of fatalism neither follows from his premisses nor, being untestable, is it cognitively meaningful. In ordinary language, it is analytic that if one has the ability to swim, and conditions for the exercise of this ability are "normal," then one has the power to swim—even though a future necessary condition or a past necessary condition of swimming is lacking. Thus Taylor's main principles, (P) "No agent has the power to perform an act, a necessary condition of which is lacking," is a false synthetic statement. Because Taylor unwittingly treats P as analytic, he is plagued by the bogey of fatalism, he drains "ability" of meaning, and he is committed both to bidirectional causation and to the idea that our own decisions deprive us of free will.
- SAUNDERS, John Turk.** Of God And Freedom. *Phil Rev* 75,219-225 Ap 66.
- Contra Nelson Pike, an essentially omniscient God is compatible with human freedom. These would be incompatible if it were true that (P): it is contradictory to suppose that a person has the power so to act that the past would be different than it is. For the power to refrain from act-X which God knows one will perform is the power so to act that God would not have existed or else would not have believed that X was going to occur. But P is false because: (i) if one knows how to do other things but, under normal conditions, does X, then one has the power to refrain from X; (ii) whenever one does X, but has the power to do Y instead, one has the power so to act that the past would be different in that past events would be followed by Y rather than X.
- SAUNDERS, John Turk.** Skepticism And Memory. *Phil Rev* 72,477-486 O 63.
- The trustworthiness of memory may be challenged by the skeptic, who claims that we cannot justify our reliance on even one ostensible memory without appealing to another ostensible memory in the process. R F Holland replied to this challenge by offering purported counterexamples to the claim ("The Empiricist Theory of Memory," *Mind*, Volume 63, Page 476). Saunders shows how these examples do not work because in them implicit use is made of further ostensible memories.

- SAXENA, Sushil K.** *Studies In The Metaphysics Of Bradley*. NY Humanities Pr 1967.
- The author of the book, an Indian, defends Bradley's views in *Appearance and Reality* wholeheartedly on most points against his critics. The central theme is that each particular transcends itself thus leading us to the idea of wholeness but that we cannot make intelligible the concept of relation and so the nature of the whole is also unintelligible. The chapter headings are Bradley on Metaphysics, Reality and Appearance, Immediate Experience, The Relational Form, Thought and Reality, The Absolute and its Appearances. There is also a concluding chapter which is especially concerned to defend Bradley's view that the metempirical is a demand of thought itself. Issue is frequently joined with positivism in this work.
- SAXL, Fritz** and Klibansky, Raymond and Panofsky, Erwin. *Saturn And Melancholy, Studies In The History Of Natural Philosophy, Religion And Art*. NY Basic Books 1964.
- In Part I the views of many thinkers, including Plato, Aristotle, Galen, the Church fathers, Arabian philosophers, and Kant are explicated to show that melancholy was defined in different ways. It was described as a pathological disease, as a type of natural disposition indicative of intellectual pre-eminence or genius, as a Grace from God for the sufferings of the Holy Martyrs, as original sin, and as a sign of virtue. Parts II and III reveal the relation of the Kronos-Saturn myth to the Humoral doctrine of melancholy. Saturn is revealed as a demon of opposites, symbolizing both good and evil. The fourth and last part is concerned primarily with an analysis of Durer's use of the Saturn-Melancholy theme in his "Melencolia I."
- SAYDAH, J Roger.** *The Ethical Theory Of Clarence Irving Lewis*. Athens Ohio Univ Pr 1969.
- The book is intended to clarify Lewis' system of ethical theory on the basis not only of his scattered published writings on the subject, but primarily on the basis of a substantial body of unpublished material. Following the exposition Lewis' ethical theory is compared to theories of Singer and Hare. The issue basic to this discussion is the relation of Lewis' versions of pragmatism and empiricism to his theory of right and value. There are conflicting opinions on this and Lewis himself was elusive. A definite answer to the questions under discussion and especially Lewis' use of Kant's ethics is argued for.
- SAYERS, E V.** Is Reconstructionism In Education A Flowering Of Progressivism? *Educ Theor* 1,211-217 N 51.
- SAYRE, Farrand.** *The Greek Cynics*. Baltimore Furst 1948.
- Assembling the different references made by other ancient writers to the Cynics, Dr Sayre writes of what he regards as their characteristic doctrines. These references (translated by Dr Sayre into good English) still remain general evidence of features of Greek thought and behavior that some historians overlook, when they reconstruct the Greek mind as simply an intellectual vision of a harmonious universe, and Greek life as a response to this vision.
- SAYRE, Farrand.** Emotive "Meanings" And Ethical Terms. *J Phil* 41,631-632 N 44.

- SAYRE, Kenneth M (ed)** and Crosson, Frederik J (ed). *Philosophy And Cybernetics*. Notre Dame Notre Dame Univ Pr 1967.
- The various papers represent a mixture of technical and non-technical discussion concentrating on the problem of distinguishing, if possible, between artificial and human intelligence. It is argued that research in information theory may lead to changes in our conception of intelligent human behavior. Also discussed are the applications of information theory to phenomenology and certain Gestalt phenomena.

- SAYRE, Kenneth M.** *Consciousness: A Philosophic Study Of Minds And Machines.* NY Random House 1969.
- SAYRE, Kenneth M.** *Plato's Analytic Method.* Chicago Univ Of Chicago Pr 1969.
- SAYRE, Kenneth M.** *Recognition, A Study In The Philosophy Of Artificial Intelligence.* Notre Dame Notre Dame Univ Pr 1965.
- The problem discussed is that of the mechanical simulation of handwritten letter-inscriptions, the solution to which has so far eluded computer designers. Kenneth Sayre claims that most proposed solutions fail because they treat the problem as one of classification. He argues, largely by means of analysis of language usage, that recognition is not a form of classification but a form of detection that includes perception of an ability to identify an object. In the establishment of this concept of recognition, attainment verbs are distinguished from process verbs and perceptual attainment from decisional attainment. He then describes a scheme for mechanical letter-recognition in which each letter-symbol is an ordered triad of code-elements involving directionality and continuity. The appendix gives an example of such a scheme.

- SAYRE, Kenneth M.** *Syllogistic Inference Within The Propositional Calculus.* Notre Dame J Form Log 5,238-240 1964.
- SAYWARD, Charles.** *Assertion And Belief.* Phil Stud 17,74-77 1966.
- The article discusses whether a sentence of the form "p, but I believe not-p" can be used to make an assertion. The author goes into what it is to make an assertion, making a distinction between truth-claims and assertions. He argues that an honest and true assertion requires that the speaker must know that he believes what he says and, therefore a sentence of the form "p, but I believe not-p" can not be used to make an assertion.
- SCAFF, Lawrence A.** *Participation In The Western Political Tradition: A Study Of Theory And Practice.* Tuscon Univ Of Arizona Pr 1975.
- This book is a tightly written monograph aiming at the conceptual clarification of "participation" which the author claims is not self evident or immediately obvious. Combining historic with linguistic analysis, the essay discusses the Greek polis, the medieval commune, and the Puritan revolution as paradigm cases of participation. Tracing the concept through Aristotle, Marsilius of Padua, and Calvin, the author makes useful reference to historical data. In his concluding chapter he suggests participation's contemporary relevance. An interesting critique and application of Kuhn's notion of "paradigms" is provided.

- R M Hare answers the question "What is it to accept a moral proposition" by insisting that accepting a moral proposition entails acting or attempting to act upon it. The author argues that instead accepting a moral proposition entails reasoning with it, i.e., heeding it in making a moral judgment or allowing that it gives a reason for doing or refraining from an action. This position explains how one can hold a principle but not act on it, as Hare's does not, and avoids Hare's problem of having to claim that we constantly amend and modify our moral principles as we find exceptions to them.

- SCHAFF, Adam.** *Marxist Dialectics And The Principle Of Contradiction.* J Phil 57,241-250 Mr 60.
- The author explores the relation between the Marxist interpretation of movement and change and the logical principle of non-contradiction. He claims that in showing that reality is changeable one does not impair the logical principle of contradiction or the essence of dialectics. In fact, only in respecting the logical principle of contradiction can one understand the dialectical concept of change and development.
- SCHAFER, Jerome.** *Mental Events And The Brain.* J Phil 60,160-165 Mr 63.
- It is first shown that J J C Smart's account of the meaning of reports of sensations in terms of physical stimulus conditions is defective. It is then argued that no such materialistic maneuvering can succeed, showing that we cannot avoid admitting the existence of nonphysical properties. However, it is added that these nonphysical properties need not be irreducibly different from physical properties. The remainder of the paper is concerned, first, to defend the proposition that a convention could be adopted for locating mental events in the brain and, then, to describe conditions under which the Identity Theory is empirically refuted.

- SCHANCK, Richard L.** *The Permanent Revolution In Science.* NY Philosophical Lib 1954.
- SCHAPER, Eva.** *Kant's Schematism Reconsidered.* Rev Metaph 18,267-292 D 64.
- Either Kant had already proved the objective validity of the categories in the Transcendental Deduction, and the Schematism chapter is unnecessary, or Schematism continues the argument, in which case the Deduction cannot be regarded as valid. The author argues that this dilemma can be resolved by reading the *Critique of Pure Reason* as an attempt, not merely to elaborate a metaphysical foundation for science, but to provide in addition a metaphysics of experience. She further contends that the basic insight suggested in Schematism is that human nature includes temporality.

- SCHARLEMANN, Robert P.** *Thomas Aquinas And John Gerhard.* New Haven Yale Univ Pr 1964.
- The author compares medieval Catholicism, as expressed in the thought of St Thomas Aquinas, with 17 Century Protestant Scholasticism, articulated by John Gerhard, a little known Continental Reformer. Scharlemann's book is of particular value because it provides one of the few complete analyses in English of the thought of Gerhard in the context of the intellectual movements of the 17 Century. His thesis, too, will be of interest to those concerned with the ecumenical movement.
- SCHAUB, Edward L.** *J G Fichte And Anti-Semitism.* Phil Rev 49,37-51 Ja 40.
- SCHEDLER, Norbert O.** *"Our Destruction Of Tomorrow: A Philosophical Reflection On The Ecological Crisis" in Ethical Issues, Durland & Bruening (eds), 247-269.* Palo Alto CA Mayfield 1975.
- The purpose of the article is to raise some questions re ecological ethics. Part one deals with the nature of the crisis. Part two deals with the historical roots of the problem including an analysis of White's thesis. Part three raises some of the ethical dilemmas that we will soon face and suggests some solutions. My conclusion is that the ecological crisis is caused in part by views of nature and argues for a holistic or symbiotic view of nature as one finds, for example, in Whitehead.
- SCHEDLER, Norbert O.** *"Talk About God-talk: A Historical Introduction" in Philosophy Of Religion, Norbert O Schedler (ed), 221-250.* NY Macmillan 1974.
- The purpose of this article is to trace the changing attitude of philosophers in the Analytic tradition toward theological language. Part one deals with David Hume.

- Part two deals with Positivism and the initial responses to the Verification Principle. Part three shows how Wittgenstein broke new ground. My conclusion is that while Wittgenstein's new approach is an advance, we are still left in a quandary.
- SCHEDLER, Norbert O.** "The Ghost In The Cosmos And The Ghost In The Machine" in *Philosophy Of Religion*, Norbert O Schedler (ed), 97-104. NY Macmillan 1974.
- The purpose of the article is to show the relationship between God-talk and talk about 'self'. The article analyses several psychological paradigms and shows how these paradigms develop into different theologies. My conclusion is that part of the crisis in God-talk (the intelligibility issue) is caused by modeling our God-talk on an extinct psychological model.
- SCHEFFLER, Israel (ed) and Rudner, Richard (ed).** *Logic And Art: Essays In Honor Of Nelson Goodman*. Indianapolis Bobbs-Merrill 1972.
- SCHIFFER, Israel.** *Science And Subjectivity*. Indianapolis Bobbs-Merrill 1967.
- This is a critical examination of the thesis that the evaluation of scientific theories is inescapably affected by various subjective factors. Scheffler is concerned to show that, for one reason or another, none of the forms in which such a thesis has been presented provides a satisfactory position. He also argues that an adequate objective basis for the evaluation of such theories is constructible and defensible. The main thrust of this argument is that, although observation statements are neither guaranteed nor incorrigible, they are a sufficient basis for the testing of scientific theories when taken in conjunction with the requirement of coherence.
- SCHIFFER, Israel.** *The Anatomy Of Inquiry: Philosophical Studies In The Theory Of Science*. NY Knopf 1963.
- This book is an excellent review of some of the major logical problems arising out of attempts to explicate such concepts as verification, explanation, meaning, and confirmation. Scheffler deals extensively with Hempel's classic papers on the paradoxes of confirmation and with the various proposed solutions by Ramsey, Popper, Carnap, Quine, Craig, and Goodman. All these solutions are shown to be defective primarily because they cannot justifiably escape from the equivalence condition, namely, that if evidence supports a given statement then it ought also to support all logically equivalent ones. Scheffler does not offer any new approaches to these issues, but when he undertakes to examine oblique sentences he does introduce a procedure that may be successful. On his analysis belief sentences would be taken not as relating beliefs to states but as relating agents to inscriptions. The main objection to this procedure is that one may believe in an utterance or inscription that has never existed. But, in agreement with Quine, Scheffler maintains that such sentences are either trivial or easily eliminable.
- SCHIFFER, Israel.** *The Language Of Education*. Springfield IL Thomas 1960.
- This book is an application of the methods of linguistic analysis in philosophy to certain basic ideas in education. Three of the five chapters appraise the characteristics of educational discourse, through an analysis of the roles of some common types of proposition: definitions, slogans, and metaphors. The function of these chapters is to propose strategies for the logical appraisal of propositions of these three kinds. The remaining two chapters offer a detailed evaluation of one basic concept, 'teaching'.

- This article criticizes the view that psychological terms can be sharply distinguished from physical terms. The author examines the introspectionist view as well as several other theories. He concludes that the wholesale distinction between physical and psychological terms is futile.
- SCHIFFER, Israel.** Verifiability In History: A Reply To Miss Masi. *J Phil* 47,158-165 Mr 50.
- SCHILLHASE, Kenneth.** *Tacitus In Renaissance Political Thought*. Chicago Univ Of Chicago Pr 1976.
- Professor Schelhase has written a work on the fortune of Tacitus in the Renaissance which shows the vast influence the Roman historian had on political thought and practice in the fifteenth and sixteenth centuries. The various chapters lay out the utilization of Tacitus in the principal countries of Europe, beginning with Italy where Boccaccio had rediscovered the original texts. The book shows the major role played by Tacitus in the transition from mediaeval to modern political ideals. A bibliography suggests further study; the notes show in detail the spread and utilization of the works of Tacitus in the Renaissance.

- SCHICK, Frederic.** Consistency And Rationality. *J Phil* 60,5-18 Ja 63.
- Several recent studies have suggested that the concept of rationality may be subject to partial analysis in terms of some prior analysis of consistency. Their common thesis is that a man could be considered rational only if his various epistemic postures were consistent with one another in some sense stronger than that of logical compatibility. The problem is how to construe this stronger sense of consistency. The paper examines three approaches to an analysis of rationality based on an analysis of epistemic consistency. Two of them are found to present necessary though not sufficient conditions of consistency. The third presents sufficient conditions which unfortunately cannot be taken to be necessary.
- SCHICK, Frederic.** Consistency. *Phil Rev* 75,467-495 O 66.
- This paper attempts to explicate the criterion of rationality expressed in the consistency of a man's beliefs, confidence-ratings, values, etc. The first four sections consider the consistency of beliefs. Two principles are identified as basic: (1) that if a man believes *p*, he cannot consistently believe not-*p*, and (2) that if he believes *p* and, further, *q* is at least as well confirmed relative to his information as *p* is, he cannot consistently not believe *q*. Various consequences of these two principles are developed and discussed. The fifth section considers the consistency of confidence-ratings. Two principles analogous to the two cited above turn out to suffice in this connection. The consistency of valuations and of preference-ratings is briefly considered in the last section.

- SCHILD, A.** Principle Of Equivalence. *Monist* 47,20-39 Fall 62.
- SCHILDER, Paul.** *Mind: Perception And Thought In Their Constructive Aspects*. NY Columbia Univ Pr 1942.
- The present volume is concerned with the principles of perception and thought. The anti-intellectualistic tendency of the book is clearly revealed at the end, where the author discusses Kant's antinomies. Thesis and antithesis represent, he says, only verbal forms of thinking having no relation to the real world. Black and white are not opposites because between them stretch the whole series of grays. In general logic is not based upon the nuances of experience but upon the distinctions of words, and their hypotatization.

SCHILPP, Paul Arthur (ed). *The Philosophy Of C I Lewis*. La Salle IL Open Court 1968.

SCHILPP, Paul Arthur (ed). *The Philosophy Of Ernst Cassirer*. Evanston IL 1949.

The volume is followed with initial biographical detail followed by essays illustrative of the various phases of the subject's thought as expounded by critical and appreciative contemporaries and a comprehensive bibliography. The editor presents a translation to a contribution to *Die Neue Rundschau* in 1930, on "'Spirit' and 'Life' in Contemporary Philosophy," in which Cassirer significantly differentiates between the existentialism of Scheler and his own philosophy.

SCHILPP, Paul Arthur (ed). *The Philosophy Of Karl Jaspers*. NY Tudor 1957.

Jaspers' reply to critics is organized in terms of the following subjects: Politics, Aristocracy, History, Religion, Communication, "Encompassing," Psychology, and "my basic philosophical attitude."

SCHILPP, Paul Arthur (ed). *The Philosophy Of Karl Popper*. La Salle IL Open Court 1974.

SCHILPP, Paul Arthur (ed) and Friedman, M S (ed). *The Philosophy Of Martin Buber*. La Salle IL Open Court 1967.

Certainly it would have been ironic if Martin Buber, the "Apostle of dialogue", had missed his chance to join the dialogue sponsored by the *Library of Living Philosophers*. The essays, by such contemporary thinkers as Van Bolthasar, Brunner, Hartshorne, Kuhn, Levinas, Marcel, Taubes and Wahl, touch every subject which Buber touched, except perhaps his social thought. All the essays are not equally valuable: some encounter Buber directly, others meet Buber only obliquely. The work presents many reflections on Buber's contribution to twentieth century thinking, and affords him the opportunity to justify his particular approach to philosophy, theology, ethics and Hasidism, and to clarify such key notions as "I and Thou", "Relationship" and "The Between."

SCHLAGEL, Richard H. Science, Truth, And Ordinary Language. *Phil Phenomenol Res* 27,27-44 S 66.

One purpose of this article is to correct the current false assumption that ordinary language is a self-contained, self-sufficient, absolute framework. Most of the article is devoted to showing how developments in the physical sciences from Copernicanism to Relativity theory have affected revisions in our conceptual framework, imposing new representations of the world on our thought. It is suggested that these developments imply a relational conception of the universe described as *contextualistic realism*. The challenge facing philosophers today is to revise ordinary language to accommodate recent developments in physics conveying a radically different conception of the universe than that imposed by ordinary language.

SCHLEGEL, Dorothy B. *Shaftesbury And The French Deists*. Chapel Hill Univ Of N Car Pr 1956.

SCHLEGEL, Richard. *Completeness In Science*. NY 1967.

Literal completeness of scientific description is shown to involve a logical contradiction; but completeness of a given science may be practically achieved in respect to what is desired for the science. The deductive structure of a science requires an unexplained (incomplete) axiom set. Goedelian undecidability and possible implications for empirical science are discussed in detail; analogical relationships to quantum theory limitations on description are found. Quantum uncertainty gives an end-point for customary macroscopic space-time description. Current cosmology is reviewed; with discussion of mathematical and physical infinities. A role for non-cognitive completion of science is proposed.

SCHLEGEL, Richard. *Inquiry Into Science: Its Domain And Limits*. Garden City NY Doubleday 1972.

This is a brief, non-technical version of the author's "Completeness in Science." Instances of practical, logical, and quantum-theoretic limits on scientific description are presented. The deductive aspect of science is illustrated and its implications for incompleteness of scientific explanation are discussed. Cosmology and its role in a completion of science are briefly considered. An analysis is made of the relations between science and the humanities, with discussion of the inadequacies of natural science as a total philosophy.

SCHLEGEL, Richard. *Time And The Physical World*. East Lansing Mich State Univ Pr 1961.

Processes which involve progressive change, and processes which are recurring and cyclic, are shown to give rise jointly to our physical time concept. The relations of that concept to entropy, reversibility and irreversibility (thermodynamic and statistical), and Boltzmann's H-theorem are discussed. The problems of time-rate change and relativity theory are presented; a novel distinction, between Lorentz processes (interaction, with associated relativistic time change) and Clausius processes (no interaction and no relativistic time change), is proposed. In a concluding dialogue between a physicist, a philosopher, and a physical chemist the salient ideas of the book are delineated.

SCHLEGEL, Richard. "Do We Know The World Through Science" in *Mind, Science, And History*, Howard E Kiefer And Milton K Munitz (eds), 171-188. Albany SUNY Pr 1970.

The manner in which a scientific truth gives information about nature, as well as the limitations on science that arise from its selectivity and the partiality of its description, are discussed (especially with reference to physics). An epistemological continuum, from immediate to abstract knowledge, is utilized. The incompleteness of science has led to undesirable technological applications. Quantum theory has brought a partial subjectivism into physics, and an elucidation of the limit on general, mathematical description of nature. Answer to title question: Yes, in discernment of mathematical properties; No, in view of irreplaceable role of feeling and observation (quantum theory).

SCHLEGEL, Richard. "Historic Views Of Causality" in *Causality And Physical Theories*, W B Rolnick (ed), 3-21. NY Amer Inst Phy Conf 1974.

Causality has a central role in physical thought; but there is wide variation, historically, in what is ascribed to particular causal properties such as degree of determinism, past-future asymmetry, and requirement of physical plausibility. Doctrines of causality in Aristotle, Newtonian mechanics, David Hume, Bertrand Russell, and current quantum theory are examined. Although philosophical analysis is a determinant of views of causality, it is apparent that there is also a strong interdependence between what has been established in science and what is accepted as the principle of causality.

SCHLEGEL, Richard. "Time And Thermodynamics" in *Voices Of Time*, J T Fraser (ed), 500-523. NY Braziller 1966.

The relationship between the directional ordering of time intervals and the entropy content of an isolated macroscopic natural system is discussed; also, statistical limitations on the relationship, the significance of time-reversible processes, and entropy increase in biology and cosmology. The problem of thermodynamic transformations in special relativity theory is related to the Lorentz equation for time-transformation, and the interaction interpretation which gives time invariance for certain macroscopic processes is presented. Tests of the interpretation could elucidate the question of whether time is constitutive in nature or relational and epiphenomenal.

SCHLEGEL, Richard. An Interaction Interpretation Of Special Relativity Theory, Parts I, II, And III. *Foundations Of Physics* 3,169-184, 277-295 1973.

On this interpretation relativistic transformations occur in the observed system rather than as a consequence of changes in relatively moving rods and clocks. The necessary condition for transformation is physical interaction between observer and transformed system: thus, a time transformation only when there is a conjugate energy interaction-transformation. Observations of relativistic time change are in accord with the theory, but non-interacting internal clock processes should not undergo time transformation; Lorentz invariance of entropy supports this conclusion. Observed state in quantum physics is likewise a consequence of interaction, and a common physical basis is presented for the relativity and quantum theories.

SCHLEGEL, Richard. Atemporal Processes In Physics. *Phil Sci* 15,25-35 Ja 48.

Cyclic processes with no progressive change from cycle to cycle are defined as atemporal processes and are examined in the context of a discussion of physical time. The photon (electromagnetic wave) process is considered in detail as one that is atemporal. A contrast is drawn between the space and time points used for description of the photon and those used in describing physical objects in eighteenth century mechanistic physics.

SCHLEGEL, Richard. Light Velocity In The Interaction Interpretation Of Relativity Theory. *Rev Metaph* 17,286-288 D 63.

An experimental situation proposed by Milton Fisk which would violate the constancy of light-speed, if the interaction interpretation is correct, is shown to require a property which light does not have. Fisk's point, that light-speed in reference frames other than one in which interaction and observation occur must be regarded as having speeds different from the constant c , is found to be valid.

SCHLEGEL, Richard. Mario Bunge On Causality. *Phil Sci* 28,72-82 Ja 61.

Bunge's book, *Causality: the Place of the Causal Principle in Modern Science*, is discussed and judged to make a contribution of importance to philosophical discussions of causality. Bunge's treatment is criticized for its dismissal of David Hume's argument against causality. It is shown that barrier penetration by a particle, discovered in contemporary quantum physics, illustrates Hume's valid criticism of causality and "intuitive certainty." Other criticisms are made of Bunge's assertion of complete determinism in quantum theory.

SCHLEGEL, Richard. On The Possibility Of Universal Knowledge. *Journal Of General Education* 6,129-135 Ja 52.

The possible meaning of a person's having universal knowledge is discussed. It is argued that the great increase in factual knowledge does not imply greater difficulty in achieving universal knowledge as defined; improved organization and generalization can compensate for the increase, and, also, some new knowledge is replacement of old error. Implications for general education programs are discussed; also, universal knowledge in philosophy, and the value to society of a philosopher.

SCHLEGEL, Richard. Quantum Mechanics And The Paradoxes Of Zeno. *American Scientist* 36,396-403 Sum 48.

Zeno's three paradoxes are described and the resolutions of the first two (the runner, Achilles and the tortoise) in terms of converging infinite series are given. The third paradox (the arrow in flight) is closely considered and found to be unrealistic in the light of quantum theory: because of the Heisenberg uncertainty relation, the exact occupation of a set of points (exact location) specified by Zeno is incompatible with the arrow's having a determined velocity. But Zeno is notably prescient in asserting "motion is impossible"; on the basis of quantum theory we would say "no one defined state of motion is possible for the precisely located arrow."

SCHLEGEL, Richard. Reality In Physics: A Classroom Discussion. *Amer J Of Physics* 40,1591-1601 N 72.

A classroom dialogue form is used. A concept of reality which goes beyond immediate experience is desiderated. Empirical confirmation of expected properties is proposed as a reality criterion for physics. Individuality among human beings suggests a role for humanists that is not reducible to the role of scientists. The success of mathematics in science is considered; although mathematical properties are notable for a large domain of natural phenomena, it is concluded that nature cannot be essentially mathematical; support is found in the inability of quantum theory to predict individual events.

SCHLEGEL, Richard. The Einstein-Podolsky-Rosen Paradox. *Amer J Of Physics* 39,458 Ap 71.

Niels Bohr's reply to the Einstein-Podolsky-Rosen assertion of incompleteness in quantum theory is illustrated by showing the initial-conditions violation of the uncertainty principle that is involved in measurements which are in accord with the hypothetical E-P-R experiment.

SCHLEGEL, Richard. The Impossible Spectator In Physics. *Centennial Review* 19,217-231 Fall 75.

The change from classical to quantum physics discredits the possibility of a natural world that is independent of the scientist's observation-interaction. Selection from a superposition of states, in the observer's interaction, is basic in the new physical philosophy. An extension to special relativity theory is proposed, wherein interaction rather than simple relative motion is essential for relativistic space-time changes. A parallel between 19th century subjectivism-existentialism and Bohr's Copenhagen interpretation, as well as between Thomistic theology and Newtonian physics, suggests an historical influence of philosophical-theological thought on physics.

SCHLEGEL, Richard. The Problem Of Infinite Matter In Steady-State Cosmology. *Phil Sci* 32,21-31 Ja 65.

The creation-of-matter hypothesis of the Bondi-Gold-Hoyle steady-state cosmology is shown to involve a contradiction. In an infinite past time, to which the first transfinite cardinal number may be assigned, the number of atoms created would have the same cardinality as the set of mathematical points of the continuum. Even, however, in an infinite universe the set of atoms must be countably infinite. If the origin of the universe is taken as being within the set of finite numbers the contradiction does not arise; hence, there is a restriction on the concept of infinity which may properly be used in the B-G-H steady-state theory.

SCHLEGEL, Richard. Wave And Inertial Properties Of Matter. *Amer J Physics* 22,77-82 F 54.

The inertial properties of matter as expressed in Newton's second law, and the mass-energy equivalence, are derived from the deBroglie equation, the Lorentz transformations, and the energy-frequency relation. Inertia is then seen as resulting from the special-relativistic time transformation, applied to mass because of the energy-mass equivalence. Newton's second law and the deBroglie equation are shown to be equivalent with respect to a postulate set for the deductive presentation

of wave and inertial properties of matter; the deBroglie equation and Newton's second law may therefore be regarded as having the same physical content.

SCHLEGEL, Richard. Why Can Science Lead To A Malevolent Technology? *Centennial Review* 21,1-18 Wint 77.

The power of science arises from its use of abstractions; examples are discussed. Undesirable technological consequences follow because abstractive powers of science lead to development of a process without regard for the total system in which it occurs. Western science long held a conception of independent elementary units, with encouragement of a "man is separate from nature" assumption. The contrary has been demonstrated by technology-in-practice and is supported by the establishment in basic quantum physics of a man-nature interdependence. We should shift from an attitude of welcome for new developments in applied science towards one of initial distrust.

SCHLEICHERT, Hubert. The Communicable Content Of The Conventional Bases For The Natural Laws. *Phil Today* 7,33-38 Spr 63.

SCHLESINGER, G. Dynamic Simplicity. *Phil Rev* 70,485-499 O 61.

Schlesinger claims that no satisfactory account has been given of the operation of the principle of simplicity as an arbitrator between rival scientific hypotheses. He attributes this lack of an account to the failure to distinguish between the concepts of static simplicity and dynamic simplicity. The former is the simplicity of an hypothesis judged on the basis of a given body of evidence and within the framework of current theory. Dynamic simplicity is associated with a continuing process over time as evidence increases and theories develop. It is dynamic simplicity, Schlesinger claims, which has played the role of arbitrator between scientific hypotheses.

SCHLESINGER, George. The Problem Of Evil And The Problem Of Suffering. *Amer Phil Quart* 1,244-247 JI 64.

SCHLESINGER, G. It Is False That Overnight Everything Has Doubled In Size. *Phil Stud* 15,65-70 1964.

On many occasions the statement "Overnight everything has doubled in size" has been held as conceptually unverifiable and hence as a meaningless statement. The author attempts to show that the statement is not only logically verifiable but practically so and that as long as present circumstances prevail we have sufficient evidence which shows that it is false that last night everything doubled in size. He attempts this demonstration by suggesting a set of circumstances under which one would have to conclude that overnight everything had doubled in size and then argues that in the absence of these circumstances we are entitled to claim that it is false that overnight everything has doubled in size.

SCHMIDT, Paul F. *Rebelling, Loving And Liberation: A Metaphysics Of The Concrete.* Albuquerque NM Hummingbird Pr 1971.

This book examines several forms of rebelling: metaphysical, historical, ontological, from the standpoint of concrete autobiographical experience. This examination leads to an analysis of loving which in turn must be transcended yielding a view of liberation.

* **SCHMIDT, Paul F.** *Religious Knowledge.* Glencoe IL Free Pr Of Glencoe 1960.

An extended analysis of claims to religious knowledge are found in the sacred books of the major world religions. This analysis shows that these claims belong in recognized sorts of knowledge, either empirical, formal or ethical, leaving some which are distinctively religious that express pervasive attitudes for living. A justification procedure is developed for the assessment of these religious-attitudinal claims.

SCHMIDT, Paul F. Commitment. *Humanist* 22,71-74 Mr-Apr, My-Je 62.

SCHMIDT, Paul F. Ethical Norms In Scientific Method. *J Phil* 56,644-651 JI 59.

A careful analysis of scientific method shows that it contains certain prescriptive norms that can be used to construct corresponding ethical norms.

SCHMIDT, Paul F. Is There Religious Knowledge? *J Phil* 55,529-537 Je 58.

Can there be a type of knowledge in religion distinct from formal knowledge (logic and mathematics), factual knowledge and ethical knowledge? This question leads to an analysis of the meaning of religious statements and appropriate justification procedures, but these procedures contain many difficulties.

SCHMIDT, Paul F. Models Of Scientific Thought. *American Scientist* 45,137-149 1957.

Three models of the character of scientific knowledge are delineated in an effort to clarify the features of scientific thought to contemporary science. The analysis covers examples drawn from the history of science, especially Euclid, Galileo, Newton, Huygens, Bacon, Kant, Labotchevski, Einstein and Whitehead.

SCHMIDT, Paul Frederic. *Perception And Cosmology In Whitehead's Philosophy.* New Brunswick NJ Rutgers Univ Pr 1967.

This book is a study of all Whitehead's writings showing how his views of perception provide a basis for understanding his metaphysical/cosmological doctrines. In so doing, the continuity of development of Whitehead's philosophy is demonstrated.

SCHMIDT, Paul F. Religion And Science. *Humanist* 16,225-229 S-O 56.

SCHMIDT, Paul F. Self-Referential Justification. *Phil Stud* 8,49-54 1957.

Besides deductive and inductive procedures, a third form, self-reference, is described and illustrated with respect to some basic logical principles.

SCHMIDT, Paul F. Some Criticisms Of Cultural Relativism. *J Phil* 52,780-790 D 55. This article is an analysis of some meanings of 'cultural relativism' as a scientific hypothesis, a methodological principle or an ethical theory with a detailed refutation of Herkowitz's relativism as a moral theory.

SCHMIDT, Paul F. Some Merits And Misinterpretations Of Scientific Method. *Scientific Monthly* 82,20-24 1956.

A distinction between discovery and justification in scientific method explodes the absolutist and skeptical accounts of scientific knowledge, clarifies the role of mechanical and mathematical models, and eliminates the opposition of social science to natural science.

SCHMIDT, Paul F. Truth In Physics. *Amer J Physics* 28,24-32 1960.

Several distinct conceptions of truth are distinguished relevant to different types of statements in physics, with special reference to laws, theories and the Duhemian thesis. These conceptions of truth are shown to be different from philosophical conceptions.

SCHMIEDER, Lawrence R. Substantial Changes In Organic Matter. *New Scholas* 18,209-251 JI 44.

SCHMITT, Charles B. Perennial Philosophy: From Agostino Steuco To Leibniz. *J Hist Ideas* 27,505-532 O-D 66.

The author traces the history of the concept of perennial philosophy, i.e., the belief that some particular continuous theme runs throughout the history of philosophy, forming certain enduring truths which are recognizable in the philosophical writings of all periods. The author believes that Agostino Steuco is the first philosopher to give this phrase a fixed meaning. The historical sources used by Steuco, and the influence of Steuco's thought on later philosophers up to the time of Leibniz, are analyzed. The author concludes that this concept has little affinity with Thomistic thought, and was not adopted by Scholastic philosophy until the Twentieth century.

SCHMITT, Richard. Martin Heidegger On Being Human: An Introduction To "sein Und Zeit". NY Random House 1969.

SCHMITT, Richard. Heidegger's Analysis Of 'Tool'. *Monist* 49,70-86 Ja 65.

Early in *Sein und Zeit*, Heidegger differentiates two senses of "to be"—"being on hand" and "being at hand." Instances of the former sense of "to be" are entities about which it does not make sense to ask, "What is it for?" Entities to which that question is applicable are examples of the second sense of "to be." This paper has three parts: (1) it argues that the distinction is correctly drawn because "being for something" cannot be expressed in the language used to talk about entities which neither are nor are not for anything; (2) it suggests some reasons for regarding Heidegger's distinction as a philosophically important one; and (3) the distinction under discussion is open to a serious objection for which the paper tries to suggest a solution.

SCHMITT, Richard. Husserl's Transcendental-Phenomenological Reduction. *Phil Phenomenol Res* 20,238-245 D 59.

The transcendental phenomenological reduction is described as the transition from thinking to reflection, which involves a change of attitude. Schmitt elaborates what it means to "bracket the objective world" and to suspend judgement. The traditional distinction between thinking and reflection, based on the distinction between what is inside and what is outside the mind, is shown to be inadequate. Reflection really involves critical detachment, a neutral attitude and disinterestedness; it must describe the new facts rather than explain them. Hence, the reduction is the transition from a nonreflective to a reflective attitude.

SCHMITT, Richard. In Search Of Phenomenology. *Rev Metaph* 15,450-479 Mr 62.

SCHMITT, Richard. Maurice Merleau-Ponty, I. *Rev Metaph* 19,493-516 Mr 66.

The author argues that Merleau-Ponty's conception of his task as a philosopher changed between *The Structure of Behavior* (1942) and *The Phenomenology of Perception* (1945) and that the latter is accordingly written in a nonscientific style susceptible of misinterpretation. Focusing first on the earlier work, he examines terminological confusions and logical difficulties in Merleau-Ponty's critique of realism, and argues that the central concept of form is scientifically useless and philosophically unnecessary. He then discusses Merleau-Ponty's later views on language before considering his rejection of objectivism and formulating the significant philosophical issues raised by his work.

SCHMITT, Richard. Maurice Merleau-Ponty, II. *Rev Metaph* 19,728-741 Je 66.

SCHMITT, Richard. Nietzsche's Psychological Theory. *J Existent* 2,71-92 Sum 61.

SCHMITT, Richard. Phenomenology And Analysis. *Phil Phenomenol Res* 23,101-110 S 62.

The author claims that we can get a better understanding of phenomenology if we notice its resemblances to analytic philosophy. He draws parallels in the following way: (1) the agreement between Husserl's and Hare's descriptions of philosophical

statements; (2) Husserl's criticisms of traditional philosophical doctrines on the grounds that they misuse ordinary language, and (3) it is illustrated that phenomenology is an explication and clarification of meanings, and that it does not construct metaphysical theories or propound theses.

SCHMITT, Richard. Phenomenology And Metaphysics. *J Phil* 59,421-428 Ag 62.

Husserl has recently been labeled a "metaphysician" by several of his commentators, and, as used by them, the term 'metaphysician' has the specific meaning of someone who makes the same demands on philosophical statements that Heidegger does, namely, that they make something clear about the meaning of being. The purpose of this paper is to show that this is a misinterpretation, that what Husserl asks of a philosophical statement is whether it makes something clear about a concept. This is a very different kind of demand, because Heidegger directs his efforts toward the illumination of a particular subject matter, whereas Husserl insists on a certain procedure for explication of meanings.

SCHMITT, Richard. Two Senses Of Knowing. *Rev Metaph* 18,657-677 Je 65.

The author's purpose is to clarify the distinction between theoretical and non-theoretical knowledge (the latter exemplified in knowing how to use tools). After discussing the notions of rules and habits, he argues that while the objects of theoretical knowledge are independent of being known, non-theoretical knowledge constitutes its objects. Furthermore, occurrent non-theoretical knowledge is an action and thus identical with what is known. Finally, the author argues that non-theoretical knowledge is non-propositional and non-evidential.

SCHMITZ, Kenneth L. Weiss And Creation. *Rev Metaph* 18,147-169 S 64.

Paul Weiss' *Modes of Being* (Carbondale, 1958) proposes an option between a radical monism denying the plurality of beings and a radical pluralism demanding the imperfection of God. Weiss concludes for the latter. Examining his position, the author first discusses the complementarity of Weiss' four modes of being and considers his conceptions of motion and causation. Then, centering on the idea of relation, he elucidates the difference between Weiss' modal philosophy and a philosophy of the creative act for which to be is to be absolutely complete in a nonreciprocal ontological relationship to a perfect God.

SCHNEEWIND, J B. Comments On Prior's Paper On "Limited Indeterminism". *Rev Metaph* 16,374-379 D 62.

The author addresses himself to A N Prior's 1962 article, "Limited Indeterminism," where Prior examines and attempts to refute an argument advanced by Jonathan Edwards in support of determinism. He holds that the crucial point in Prior's argument is the claim that there may be a dispositional property which accounts for the regular occurrence of uncaused volitions without appealing to anything non-existent. After analyzing Prior's use of disposition and capacity, however, the author concludes that his defense of indeterminism is unsuccessful.

SCHNEIDER, Friedrich. Realism In Recent German Philosophy. *Phil Phenomenol Res* 19,143-182 D 58.

The purpose of the article is to show the realistic trends in recent German Philosophy, which have emerged from problems in modern Philosophy, and which now, according to the author, have converged to a generally accepted solution. There is a general consensus of belief in a common and valid truth. The following are discussed: Kant and the philosophy of mind, the philosophy of life—Nietzsche, Lipps, Scheler, existence philosophy—Heidegger, Jaspers, and recent realism—Rehmke, Driesch, Hartmann, Haering, and Dingler. It is concluded that contemporary philosophy in Germany has a new approach.

SCHNEIDER, Herbert W. *Morals For Mankind*. Columbia 1960.

SCHNEIDER, Herbert W. *Sources Of Contemporary Philosophical Realism In America*. Indianapolis Bobbs-Merrill 1964.

Schneider's aim is to present realism as "one of the realities of American history." In the Introduction Schneider picks out as the dominant traits of American philosophy in the twentieth century: 1) objectivism, 2) behaviorism, and 3) anti-idealism. Part One

- of this book is a reprint of Part IX, "Emergence of Naturalistic Realisms." It discusses the "two psychologies" of William James, the "systematic dualism" of Santayana, James's achievement of "natural realism" by means of pragmatism and radical empiricism, the program and platform of the six new realists and other sources of realism in thinkers such as F J E Woodbridge and G H Mead. Part Two consists of "The Program and First Platform of Six Realists" and other selections from R B Perry, F J E Woodbridge, and W P Montague.
- SCHNEIDER, Herbert W.** *Ways Of Being: Elements Of Analytic Ontology*. NY Columbia Univ Pr 1962.
- Professor Schneider develops an "analytic, tentative, piecemeal ontology" that is not a cosmology. Yet it is intended both to be more all-embracing than contemporary existentialism, and more factual than the traditional systems of ontology and cosmology. The author's "map of the world" in terms of "how things are" reveals three main "dimensions" (speaking metaphorically or practically): nature, culture, and structure.

- SCHON, Donald.** Rationality In Retrospective And Prospective Deliberation. *Phil Phenomenol Res* 20,477-486 Je 60.
- The purpose here is to explore some consequences of the distinction between retrospective and prospective deliberation, and implications for what is ordinarily taken to be rationality in practical deliberation. Prospective deliberation may include both the judgment that an act is right and the decision to perform it. All retrospective deliberation is evaluative; there is no decision to perform. A threefold distinction emerges: retrospective evaluation, prospective evaluation, and prospective decision. The distinctions drawn here are complex. Whether deliberation is directed toward an action already performed (retrospective) or toward an action not yet performed (prospective), these distinct deliberations are subjected to different types of irrationality. The distinctions drawn help to clarify criteria governing rational practical deliberation.
- SCHON, Donald.** Ultimate Rules And The Rational Settlement Of Ethical Conflicts. *Phil Phenomenol Res* 19,53-64 S 58.
- The author takes issue with Aiken and Toulmin, who assume that actual ethical systems contain rules whose conflicts are, in principle, unresolvable by rational means. According to their model of such systems, rules are arranged in a hierarchy; conflicts of rules within the system can be settled only by reference to some other rule of higher priority than the conflicting rules. Conflicts of the highest or "ultimate" members of the rule-hierarchy are beyond rational settlement. The author argues that this model incorrectly describes actual ethical systems, which contain no rules which are ultimate in the required sense.

SCHOOLMAN, Morton. Marcuse's Aesthetics And The Displacement Of Critical Theory. *New German Critique* 3,54-79 Spr 76.

A comprehensive examination of Marcuse's aesthetic theory, the argument focuses on the significance of art as the last form of opposition in a totally reified society, and its central position in Marcuse's Critical theory. By virtue of Marcuse's attention to the psychological processes underlying the aesthetic categories, art becomes the exception to his one-dimensional thesis. Yet, as domination relations penetrate even into the unconscious dimensions of existence, art, too, is reified and increasingly conforms to the ideological dynamic of modern capitalism.

The purpose of this paper is to establish the point, in opposition to Kant, that categorical obligation does not require an autonomous foundation. Because of his failure to regard our relatedness to others as a primary fact of the moral life, Kant was hampered in providing an adequate social reference for the moral law. Had he been clearer in his own mind as to the metaphysical foundation of the categorical imperative, he would have found it necessary to credit heteronomy with a fundamental role in the moral life. Freedom and reason, which Kant properly recognized as necessary conditions of morality, became for him too exclusively ends-in-themselves.

SCHRAG, Calvin O. *Existence And Freedom: Towards An Ontology Of Human Finitude*. Evanston IL 1961.

This study of existential philosophy is an attempt to interpret the views of Kierkegaard, Heidegger, and Sartre in terms of a "philosophy of human finitude." A common perspective on the nature of existence, beyond any stress on individualism, is taken to underlie the positions of the major existentialist. The author maintains that "existentialism as a philosophy can in no way prescribe a religious or non-religious point of view"; it does provide a viable point of departure for an understanding of man in ontological terms. After preliminary chapters on methodological foundations (in which the relationship between phenomenology and existentialism is discussed) and the existentialist concept of world, the author investigates the problems of anxiety and finitude, death and transitoriness, time and history, conscience and guilt, and decision and integrity. The ideas of the existentialists are explored systematically in terms of issues rather than through historical delineation.

SCHRAG, Calvin O. *Experience And Being*. Evanston IL 1969.

This work draws together the results of phenomenological studies that bear on the nature of experience. In structure the book is divided into three parts. Part I deals

with the character of the field of experience. In Part II a transcendental reduction is performed: the experienter is considered with respect to body (embodiment) speaking (language), and sociality (being with others). In Part III Schrag seeks to show the import of this new view of experience both negatively as a criticism of traditional metaphysics (including scientific naturalism) and positively as it suggests a new ontology.

SCHRAG, Calvin O. The Structure Of Moral Experience: A Phenomenological And Existential Analysis. *Ethics* 73,255-265 JI 63.

This essay makes use of phenomenological and existentialist categories to describe the structure of moral experience, the structure of experience that underlies the act of moral valuation. Intersubjective intentionality is one element of this structure; the moral self emerges only in encounter with others. The historicity and temporality of the moral self are two more elements. Only a self aware of time can appreciate an "ought." Purpose and meaning—in the sense of the unification of life in hope and memory—are also essential. Finally, freedom is required to actualize oneself. Together these elements account for the possibility of a moral act.

SCHRAG, Oswald I. Existentialist Ethics And Axiology. *S J Phil* 1,39-47 Sum 63.

The purpose of the article is to explore some of the main differences and similarities between existentialist ethics and axiology and to show how the two approaches are partners, not antagonists. Contrary to some axiologists, existentialists deny that there can be any objective criterion for value experience. Wherever there has been complacency and shallow optimism about human conduct and objectivity of norms, existentialist analysis stands as a constructive criticism. But in its strong emphasis on individualism, it often fails to relate the human situation to the concrete experience of community living. It is a necessary gadfly to an understanding of the depth and breadth of human existence, but constructive participation in community means involvement, some compromise, and some inevitable forms of unauthenticity and moral ambiguity—the latter, too often, not taken seriously by objectivists.

SCHRAG, Oswald O. *Existence, Existenz, And Transcendence: An Introduction To The Philosophy Of Karl Jaspers*. Pittsburgh Duquesne Univ Pr 1971.

The book provides an introduction to the basic thought of one of the major contemporary existentialist writers. It begins with an exposition of Jaspers' earlier interest and interpretation of psychology and psychotherapy and continues with his main philosophical writings. Considerable attention is given to the differences and relation of empirical existence, *Existenz*, and transcendence. The limits of knowledge in the general areas of the humanities, including philosophy, lead to the interpretation of symbol and cipher. It shows Jaspers' abiding interest in metaphysics and ontology, but at the same time presents him as one of the most perceptive critics of traditional approaches. The purpose of the book is not so much to set forth the limits of knowledge, but through *Existenz* and transcendence to invite the reader into authentic situations of freedom and self-becoming.

SCHRAG, Oswald O. Autonomy Or Theonomy? *Personalist* 42,224-234 Spr-Apr 61.

The Kantian principle of autonomy, a self-imposed law, is contrasted with theonomy as a form of heteronomy, a law imposed by another. Theonomy means moral law imposed upon man by the divine will. The article includes a critique of Brunner's Christian ethics defined as "the science of human conduct as it is determined by Divine conduct." The conclusion is that the Christian ethic is not simply autonomous nor simply theonomous, for it is both. The theonomous approach constitutes the motivational aspect of moral conduct and autonomy is a necessary approach from the epistemological perspective. The assertion that theonomy is based on a unique or a priori awareness, or Divine Command creates the problem of deciding between conflicting revelation-claims.

SCHRAG, Oswald O. Faith And Reason: Still Shifting For First Place. *Journal Of Bible And Religion* 23,197-201 JI 55.

The purpose of the article is to examine some of the different views of the relation of faith and reason. The view maintaining opposition or contradiction between faith and reason is rejected because of inadequate interpretations of both faith and reason. It is shown how a more inclusive use of reason can be complementary to faith instead of destroying it. The position of the Barthians that faith is a special medium of religious knowledge, a gift of God, or a unique independent category is rejected for a view in which greater emphasis is on human response and interpretation. Faith and reason are seen as complementary aspects of a unity of consciousness which no longer justifies speaking of "reason alone" or "faith alone."

SCHRAG, Oswald O. The Main Types Of Existentialism. *Religion In Life* 23,103-113 Wint 1953-54.

Beginning with the problem of defining existentialism, the article presents some of the negative definitions before giving a more positive characterization. The different responses to the existential situation, including the religious and non-religious, have in common the view that knowledge of both the social and personal self reaches its

- limits within a context of subjectivity and intersubjectivity. They can agree that man is unable to give a satisfactory coherent account of reality, that all men in one form or another encounter nothingness, "dreadful freedom," anxiety, and meaninglessness, but that the religious response has a different way of confronting these situations.
- SCHRAG, Oswald.** Jaspers: Beyond Traditional Metaphysics And Ontology. *Int Phil Quart* 5,163-182 My 65.
- The article is an attempt to show that Jaspers is both ontology's best friend and most severe critic. Ontology is man's persistent effort to unveil being, but being is a perpetual unveiling and veiling, and instead of understanding being as that out of which all else proceeds, it becomes weighted toward objective beings in the world. Consequently, traditional metaphysics and ontology tend to reduce being to a mode of being, i.e., object-being, self-being, or being-in-itself. Periechontology resists equating a mode or modes of being with the source of being. The symbol and cipher are the only means of overcoming the subjectivity-objectivity polarity. Metaphysics becomes the reading of ciphers, the language of transcendence and eventually all ciphers and cipher-reading, including *Existenz* founder, and foundering itself becomes the decisive cipher pointing to both being and nothingness.

- Marx's atheism is not just a tactical or political appendage in thought, but philosophically, a necessary element in his whole theory. The issue of atheism, most pointedly, subsumes some metaphysical issues crucial to ethics: how are development, finite freedom, personal responsibility possible if God exists. Marx struggles with some of the same issues as did the Neo-Platonists, Kant, Spinoza and Hegel. From anthropological and other evidence Marx concludes that voluntarism (historically and materially conditioned) is a necessary characteristic of humanity and that therefore there is no God. He also provides hints, including crucial allusions to Kant on the ontological argument, that he holds all proofs for the existence of God to be fallacious and in truth alienated self-apprehension. Marx's position on this topic is therefore very sophisticated and quite basic.

- SCHUSTER, Melvin M.** An Analysis Of Relational Time. *Rev Metaph* 15,209-224 D 61.
- Citing Broad, Gunn, Whitehead, and Russell, the author first compares the relational and absolute theories of time, which differ on the question whether time can exist independently of what is in it. He then distinguishes two forms of the relational theory of time; in the one, temporal relations are internal to events and things, and in the other time is external to its elements. Focusing on external relational time, the author contends that the logical possibility of recurrence invalidates the assumption of asymmetry as a necessary characteristic of time and entails a major violation of transitivity as well.

It is shown that Johnson's critical review of the essay by Jenyns expressed his hostility to facile explanations of the very real problem of the evils in life. His view that many of the vile misfortunes of man are either the product of an inflamed imagination or are due to the moral evil generated by man's abuse of his freedom. The sentiments of Johnson are revealed in his attack upon Jenyns' casual acceptance of the fate of the poor, his criticism of the version of Leibniz's theory of plenitude which allowed for moral and natural evil as a realization of all possibilities, and his belief that the problem of evil had not been resolved by the philosophy of the eighteenth century.

- SCHWYZER, H R G.** Sibley's "Aesthetic Concepts". *Phil Rev* 72,72–78 Ja 63.
Sibley tries to answer the question of what it is to justify or support the use of aesthetic terms in "Aesthetic Concepts," *Philosophical Review*, Volume 68, Pages 421–450. Schwyzzer criticizes as inadequate Sibley's characterization of supporting aesthetic judgments as the mentioning of non-aesthetic features (along with nonverbal behavior). Sibley's dichotomy between aesthetic and non-aesthetic terms blinds him to the fact that any utterance which gives reasons for an aesthetic judgment will require perceptiveness, taste, and sensitivity, even if the features appealed to are "non-aesthetic." There is no mystery of how the critic passes from the aesthetic to the non-aesthetic use of language—all his use is the aesthetic use.

This article contains twenty-one previously unpublished letters of William James to David Starr Jordan, President of Stanford University. It establishes James' personal friendship with Jordan and the negotiations which led to James' appointment as visiting professor of philosophy in 1906. Also, James' firm and broad grasp of the philosophic scene in America is revealed in his many recommendations of philosophers for teaching positions at Stanford.
- SCOTT, Frederick J Down.** William James & Stanford University: 1906. *San Jose Studies* 1,28–43 My 75.
A detailed account is given of James' teaching and other activities while at Stanford University, including his experience of the great earthquake. Among the nine previously unpublished letters of James to President Jordan are those which speak so highly of John Dewey, Ralph Barton Perry, James Rowland Angell and Addison Webster Moore in recommending them for the new philosophy department at Stanford. Other letters express James' views on what he thought should be Stanford's future career after the earthquake.

- SCOTT, Frederick.** Scotus, Malcolm, And Anselm. *Monist* 49,634–638 O 65.
Despite the striking similarity of the analysis of Anselm's ontological argument by Malcolm and Scotus, there is enough difference to suggest that Scotus argued more clearly and cogently. The differences are: (1) Scotus offers only persuasive arguments and not any strict demonstration, which Malcolm alone considers, to show the possibility of the concept of God, where, moreover, infinity and not perfection is the operative factor. (2) Where Malcolm sees two arguments, Scotus sees two steps of the same argument. (3) If a linguistic connection shows the concepts 'uncaused' and 'infinite' to be only correlative, Malcolm has no more right to conclude the "second" argument, God is uncaused because unlimited, than, as Scotus argued, God is unlimited because uncaused. A causal connection of these two concepts justifies this latter inference. (4) Where Malcolm takes necessary existence to be a property of God, Scotus makes infinity, not a property, but a mode.
- SCOTT, G E.** Quine, God, And Modality. *Monist* 50,77–86 Ja 66.
A valid formulation of Anselm's ontological argument is given, making use of modal logic and higher order quantificational logic in order to describe a class of

- psi-predicates, among which is Anselm's predicate G (for 'that than which no greater is conceivable'). An attempt is made to circumvent the difficulties attaching to combinations of modal and quantificational logic raised by Quine under the headings of "referential opacity" and "Aristotelian ontological commitment." It is argued that Malcolm's analysis of the ontological argument, given the presently-available machinery of formal logic, is needlessly complicated. The question of the soundness of the ontological argument is left unsettled.

- SCRIVEN, Michael.** The Objectivity Of Aesthetic Evaluation. *Monist* 50,159-187 Ap 66.
- Genre-relative judgments of aesthetic merit are often easily given, like craftsmanship judgments, because the relevant criteria of merit are built into the definition of the genre, e.g., good detective stories or filigree work. But judgments that affirm (absolute) greatness as a work of art, not craft, are much more debatable. Crudely, this is because there are no clear criteria for art itself, the usual suggestions being either too vague or too restrictive. In this paper a more detailed analysis is given of the standards that considerations have to meet in order to support objective judgments of merit. They must, trivially, (i) have certain grammatical properties and (ii) be true; they must also be (iii) demonstrably relevant to, (iv) independent of, (v) simpler than the conclusion, and (vi) derivable from indisputable starting points. Art criticism is then seen as having an important but limited rational element.

- SEARLE, John R.** How To Derive "Ought" From "Is". *Phil Rev* 73,43-58 Ja 64.
- In arguing that the alleged distinction between descriptive and evaluative statements needs to be re-examined, Searle examines a counterexample to the thesis that one cannot derive an "ought" from an "is." In the counterexample he derives "Jones ought to pay Smith five dollars" from "Jones uttered the words 'I hereby promise to pay you, Smith, five dollars,'" using three intermediate steps.
- SEARLE, John R.** Meaning And Speech Acts. *Phil Rev* 71,423-432 O 62.
- Searle criticizes analyses like Hare's analysis of "good" and Strawson's analysis of "true," which make the speech act customarily performed with a word W, in forms like "This is W," part of the meaning of W. Searle shows that if we look at forms other than the indicative, no speech act need be in the offing with words like "good" and "true," and so a speech act cannot be part of their meaning. Searle concludes with his own explanation of the quasi-necessary connection between "good" in "This is good," and the speech act of commending.

- SEEBERGER, Wilhelm.** The Political Significance Of Hegel's Concept Of History. *Monist* 48,76-96 Ja 64.
- "The sense of history characteristic of our age is probably unequaled in sheer banality, by that of any previous epoch of Western Civilization." Our distorted notion of history (as a kind of antiquarianism) devalues the study of the philosophy of history. Responsible for this are (1) the increasingly prevalent pragmatic frame of mind and (2) the world-wide propagation of rationalism. In the context of discussing aspects of Hegel's concept of history the author argues that the intensive interaction of the two above mentioned tendencies has nearly eclipsed "the true bearer of human culture, the humanities, leaving them to a wretched existence in the shadow of technology, the natural sciences and economics." The true nature of this situation—as historically interesting as it is politically hazardous—first comes into focus when considered in light of the full meaning of Hegel's theory.

- SEELY, Charles S.** *Modern Materialism: A Philosophy Of Action*. NY Philosophical Lib 1960.
- "This book presents a theory of the nature of things," and counsel in respect of the practical objectives of men. The former marks no advance over the Milesian Pre-Socratics; the latter lacks even the merit of being grounded in a "hard-headed" materialism.
- SEELY, Charles S.** *The Philosophy Of Science: Essays In Contemporary Realism*. NY Philosophical Lib 1964.
- By 'realism' the author means 'materialism'. He discusses ancient materialism, Renaissance materialism, Marxism, mechanical materialism, and modern materialism. The most important aims of materialism are "true democracy" and "full freedom" for all humanity. Most people in the world, according to the author, are not yet capable of assuming the responsibilities that must accompany either democracy or freedom. This book is cultural in nature rather than technical.
- SEELY, Charles Sherlock.** *Philosophy And The Ideological Conflict*. NY Philosophical Lib 1953.
- This book purports to show that idealism is the philosophy of historical reaction and the supporter of modern capitalism while materialism is the philosophy of science and the basis of modern socialism. The contributions of various philosophers are evaluated, in terms of class conflict. Mechanical materialism serves the "right wing" of progressive movements and modern materialism, the "left wing." The author concludes that capitalism must accept modern materialism, for socialism will inevitably emerge as the dominant world ideology. This transition can be achieved, without bloodshed, through capitalistic resignation rather than resistance to modern materialism. Whatever provocative merit this book may have intellectually, its value is lessened by questionable historical references and analytic generalities.

SEFLER, George F. *Language And The World: A Methodological Synthesis Within The Writings Of Martin Heidegger And Ludwig Wittgenstein.* Atlantic Highlands NJ Humanities Pr 1974.

Despite the deep-set differences between the writings of Heidegger and Wittgenstein, there exist equally fundamental similarities. The issue is to discover the proper perspective from which both the differences and similarities are recognized. Employing a method not unlike Carnap's structural descriptions, I attempt to make patent these likenesses in three broad areas. First, the joint emphases upon the primarily descriptive character of philosophic method as compared to the explanatory techniques of science are discussed. Second, for both thinkers, the limits of language are the limits of the world. The Heideggerian world and the Wittgensteinian proposition of the *Tractatus*, while distinct in content, are structurally equivalent. Both are instrumentally determined and pragmatically defined as concatenated wholes, rather than summational aggregates. Third, the nonrepresentational character of the language of ontology is recognized by both men; its kinship to poetry is admitted. Based on this methodological interpretation, a common ground to existential and analytic thinking is provided.

SEIDEL, George J. *The Crisis Of Creativity.* Notre Dame IN Notre Dame Univ Pr 1966.

The work attempts to study problems of creativity from a philosophical perspective. Since creativity contains elements of the unpredictable and the irrational, the essentially rational approach of philosophy gives way to the historical, so that the basic elements involved in the creative process may be studied. The notion of the unconscious is traced from Leibniz to Kant to Freud; the association of ideas from Hume; the importance of "forgetting" from William James. Insights from these thinkers are contrasted with scientific methodologists, such as Francis Bacon and Descartes, on the one hand, and the extremes of "genius is to madness near allied" on the other.

SEIDEL, George Joseph. *Martin Heidegger And The Pre-Socratics; An Introduction To His Thought.* Lincoln 1964.

The book addresses itself to Heidegger's interpretations of two seminal Greek thinkers, Parmenides and Heraclitus. These interpretations are set in the context of Heidegger's overall view of the Western tradition of philosophy, as also against the background of his highly original views on the meaning of history and language. Heidegger's interpretations are also compared, largely in footnotes, with the more accepted views of classics scholars of early Greek philosophy. The work is an introduction to Heidegger's thought not only in the sense that it enables one to see that thought in confrontation with the very beginnings of philosophy—for Heidegger the point at which Western thought begins to take a wrong turn—but also in the sense that it introduces the reader to the basic themes which concern the philosopher from first to last.

SEIGEL, Jerrold Edward. *Rhetoric And Philosophy In Renaissance Humanism: The Union Of Eloquence And Wisdom, Petrarch To Valla.* Princeton NJ Princeton Univ Pr 1968.

SEIGEL, Jerrold E. Ideals Of Eloquence And Silence In Petrarch. *J Hist Ideas* 26,147-174 Ap-Je 65.

This article examines the relationship between philosophy and oratory in humanism in general, and Petrarch in particular. The author claims that for Petrarch, philosophy and rhetoric are inseparable. Petrarch seems to have believed that the skills of oratory are as appropriate for an individual's inner life, as well as for public speakers. Yet, Petrarch excluded the pursuit of eloquence from the moral philosophy of solitude and silence. The author concludes that Petrarch's contradictions on this relationship stem from the humanist position itself, which seems unable to unify the pursuit of eloquence with the pursuit of wisdom.

SEIGFRIED, Charlene Haddock and Seigfried, Hans. "Beyond Humanism: Nietzsche's Idea Of The Overman" in *Man In Society: Facts And Visions*, Helmut H Loiskandl (ed), 181-201. Dubuque IA Kendall/hunt 1971.

Nietzsche's paradoxical denigration and exaltation of the person is interpreted as resulting from his dual program of first criticizing humans as they are and then projecting an ideal of the fully human. The overman modulates Dionysian artistic ecstasy in his celebration of life with Apollinian freedom under law. The key to this interpretation is creativity, approached as the overcoming of nihilism, which is elucidated through a critique of morality. The two-fold character of life as destructive and creative is grasped in the control of the process of change through the ordering of the will to power. The overman as the dynamic expression of life raising itself to ever new heights for the sheer joy of play revalues all values and in so doing creates a new earth. Because no meaning is given in itself, it cannot be discovered but only created. The values that thus emerge will mirror those who created them rather than the reverse. Life as chaos ordered provides the foundation and justification for the emergence of the overman.

SEIGFRIED, Hans and Seigfried, Charlene Haddock. "Beyond Humanism: Nietzsche's Idea Of The Overman" in *Man In Society: Facts And Visions*, Helmut H Loiskandl (ed), 181-201. Dubuque IA Kendall/hunt 1971.

SELF, Donnie J. An Alternative Explication Of The Empirical Basis Of Medical Ethics. *Ethics In Science & Medicine* 2,151-166 1975.

This paper offers an analysis of and an alternative to an argument which attempts to establish an empirical basis for medical ethics. After stating the case which Robert Veatch offers for the empirical basis of medical ethics, an analysis points out the numerous inadequacies in it. It is found to confuse the categories of fact and value, to reduce ethics to science, to commit a classical naturalistic fallacy, to equate falsely empirical observation with sensory observation. Then an alternative explication of the empirical basis of medical ethics is given. The alternative explication comes in an analysis of the concept of justification in terms of a correspondence theory of truth and a coherence theory of verification or confirmation. As a result, value judgments are held to be empirically verifiable through affective-conative (emotive) experience rather than sensory experience.

SELF, Donnie J. Inconsistent Presuppositions Of Dewey's Pragmatism. *Journal Of Educational Thought* 10,101-109 1976.

This article exposes a fundamental inconsistency between the philosophical pre-suppositions of certain pragmatist contentions through a critical analysis of the phrase 'good for what'. It notes that in replacing intrinsic value with instrumental value Dewey reduces value concepts to functional concepts. It establishes that functional concepts presuppose an objective value structure and that knowledge of it comes through a wider range of experience than just sensory experience; but this is inconsistent with the pragmatist claim to be a strict scientific naturalism which presupposes that there is no objective value structure and that all knowledge comes through sensory experience. Similar results are obtained from the explication of valuation in terms of troubled experience.

SELF, Donnie J. Methodological Considerations For Medical Ethics. *Science, Medicine And Man* 1,195-202 1974.

The rate of development of bio-medical technology has forced upon physicians and medical scientists increasing numbers of medical ethical decisions. While enormous interest in and considerable emphasis upon the problems of medical ethics have been generated in recent years, unfortunately, little progress has been made in clarifying the medical ethical decision process. Most works in medical ethics usually just enumerate the problems. Seldom do they provide solutions or even attempt to provide ways to go about finding solutions. This paper is an attempt to explicate the philosophical foundations of a methodology for making medical ethical decisions. It considers a neutral methodology for the humanities somewhat analogous to scientific methodology. It is based upon the epistemological significance of value experience and the supervenience of value upon factual circumstances.

SELF, Donnie J. Objectivity And Value Supervenience In Medical Ethical Decision-Making. *Ethics In Science & Medicine* 2,145-150 1975.

This paper develops the thesis that value is supervenient upon fact. It contends that value is objective and that there are imperative requirements and normative relationships existent in reality. The thesis is established by applying a previously briefly sketched decision procedure for a methodology of the humanities to three possible variants of a renal transplant case and observing the alterations in the value conclusions when the facts of the case change. In the process the previously briefly sketched decision procedure is elaborated and analyzed in detail. The detailed analysis incorporates a consideration of the problem of whether it is ever appropriate to use a legal minor in a medical procedure from which he will not directly benefit.

- The purpose of this paper is to correlate and appraise contending positions in contemporary philosophy. There are four of these demanding attention: realistic empiricism, materialism, existentialism, and neo-Thomism. It should be noted that these positions are dominant in different cultural regions and have divergent historical connections. In this respect, philosophy differs from science.

- This article emphasizes the mechanism of perceiving, especially the role of sensations, which it is maintained give perceiving objective import. The author takes issue with traditional empiricism, by showing that sensations are not terminal and not in the purely introspective tradition; but integral to the activity of response. One looks through his visual field at the object! there is some basis for cognitive transcendence. It is concluded that phenomenalism, experimentalism and philosophical behaviorism all are unable to grasp the mechanism of perceiving and cannot show how it connects up the perceiver with his world.

- SELLARS, W.** *Science, Perception And Reality*. NY Humanities Pr 1963.
- Unlike many books of its kind, this collection of essays is more than a mere aggregate of papers loosely ordered around a set of common themes. In fact, for a work sensitive to the values inherent in the analytical tradition, it is surprisingly systematic, and strikes a happy balance between the products of the system-builders and the deliverances of those who are content to give us merely isolated insights. It embodies a sound knowledge of the history of philosophy, a sensitivity to the contributions of the British philosophers since Bradley, and desire to take science seriously without succumbing to the reductionism which so often characterized the contributions of the positivists. Sellars is at pains to incorporate in his system the partial truths which always characterize conflicting philosophical alternatives.

- SELLARS, Wilfrid.** The Identity Approach To The Mind–Body Problem. *Rev Metaph* 18,430–451 Mr 65.
- The author's purpose is to clarify central themes of Feigl's theory that "raw feels" or sense impressions are identical with "brain states." He first discusses the concept of universals, making note of their public character and temporal dimension. He then examines the notion of raw feels and the theory's implicit concept of the brain as a core person before considering a stronger alternative, namely, that brain state universals are yet to be discovered. Contending that raw feels are not reducible to neurophysiological states, the author concludes that the identity theory is acceptable only in its weak and uninteresting form.

- SELLARS, Wilfrid.** Truth And "Correspondence". *J Phil* 59,29–55 Ja 62.
- The purpose of this paper is to determine what, if anything, of importance is contained in the traditional correspondence theory of truth in addition to that aspect crystallized in the semantic definition of truth. Is there a sense of 'correspond' other than that explicated by semantic theory in which empirical truths correspond to objects or events in the world? It is argued that the correspondence sought is limited to elementary statements (more accurately, the thoughts expressed by elementary statements) and that the role of matter-of-factual statements is that of constituting a projection in language—users of the world in which they live.
- SELLARS, Wilfrid.** Vlastos And "The Third Man". *Phil Rev* 64,405–437 JI 55.
- SELSAM, Howard.** *Ethics And Progress: New Values In A Revolutionary World*. NY International 1965.
- Emphasizing changing ethics in a changing world, Selsam shows its development from feudalism to capitalism and from capitalism to socialism. Capitalism required a new ethics for its new economic order. Kant tried to provide this ideal foundation for bourgeois morality and Franklin provided the practical foundation. But Franklin's ethics of thrift, industry, honesty, and exactness was replaced in latter-day bourgeois society by their opposites. Also developed were Kant's empty categorical imperative, Royce's vapid loyalty to loyalty, and Sartre's subjective standard. On the side of constructive ethics Selsam recommends the following: (1) willing good to

others, (2) expressing the will in practice, (3) the unwillingness to betray or become an enemy of the people. An interlude is afforded by a section entitled "Parodies of Marxism" which includes "refutations" by Lord Acton, Toynbee, Russell, Poper, and Tucker. Much of their attack is based upon the false presumption and straw man of inevitability.

SELSAM, Howard. *Philosophy In Revolution.* NY International 1957.

The purpose of this book is to develop a Marxist theory of the nature of philosophy, its history, and its function in a revolutionary age. Philosophy prior to Marxism is interpreted as the work of a small intellectual elite removed from the processes of production and from the historical class struggle. The problems of social philosophy must be solved by social science coupled with social action, not by philosophical speculation. This central theme is applied in turn to materialism, epistemology, and ethics.

SELSAM, Howard. *Socialism And Ethics.* NY International 1943.

This book is the first comprehensive study of Marxist ethics in English combining philosophical analysis with a sociohistoric approach, enlivened by illustrations from general cultural phenomena. Selsam's book makes two specific contributions: (1) It focuses attention on the central place which moral issues occupy in Marxism. (2) It points to the universal criterion within the historical perspective of Marxism. The remaining chapters survey ethical ideals of the past and present, and show the application of socialist ethics to such problems as the individual, the family, the state and nation. The final chapter on "The Meaning of Freedom" is a good summation of the central thesis.

SESONSKE, Alexander. *Value And Obligation, The Foundations Of An Empiricist Ethical Theory.* Berkeley Univ Of Calif Pr 1957.

The author claims that the "real revolution" in twentieth century ethics goes beyond both G E Moore and those he criticized. It sees that (a) the logic of moral and scientific discourse are not the same; (b) the proper object of analysis is the use of statements; (c) ethical analysis must take account of the behavioral and linguistic context. The empirical theory here developed begins with the common moral experiences and problems of moral agents. It attempts to bring together pragmatic and analytic philosophy, teleological and deontological ethics.

SESONSKE, Alexander. "Cognitive" And "Normative". *Phil Phenomenol Res* 17,1-21 S 56.

SESONSKE, Alexander and Cavell, Stanley. Logical Empiricism And Pragmatism In Ethics. *J Phil* 48,5-16 Ja 51.

A division has arisen within the naturalist school of moral philosophy, with the contenders being "the emotive theorists vs. the cognitive theorists." The author suggests that the fundamental agreements between the groups far outweigh the peripheral and sometimes illusory disagreements. The article establishes the areas of agreement, deals with illusory disagreements, and indicates the peripheral disagreements can be considered disagreements in emphasis.

SESONSKE, Alexander. Performatives. *J Phil* 62,459-467 S 65.

Functions of language are distinguishable via the effects of speech acts on human relations. Utterances alter three sorts of human relations: (1) Psychological relations: one person has knowledge of or some feeling or attitude toward another. (2) Generative relations: an action of one person brings about some act or state in another. (3) Formal relations: persons are formally related when appropriate or permissible interaction between them is defined or determined by implicit or explicit conventions or rules accepted within a community. Formal relations guide a major portion of our activity. *performatives* are utterances whose point is to alter formal relations. In the proper context an utterance *constitutes* an event which renders some actions permissible, prohibited, or obligatory. Once the utterance occurs formal relations are different. To utter an ostensible performative sincerely, implies that the necessary conditions for its propriety are fulfilled; hence the speaker may be held responsible for fulfillment of these conditions.

SEVERENS, Richard. Psychological Contexts. *J Phil* 59,95-99 F 62.

Assume there is overwhelming evidence for asserting 'Sadie fears Dracula'. But we feel a philosophical constraint to expunge purported references to purported objects that do not exist. And we have available standard procedures for removing such

purported references without rendering nonsense of such contexts. The trouble is that these standard methods either conflict with the best available empirical evidence or fail to eliminate such purported references. If we are to preserve psychological discourse we may find it advisable to give up our prejudice that all referring devices must refer if they are to occur in true sentences.

SEWELL, E. *The Human Metaphor.* Notre Dame Notre Dame Univ Pr 1964.

The author examines literary sources, takes poets as subjects, and allows their philosophical implications to emerge. Man is thought (Descartes), but thought is figuring (Swell). Hence man is the figure who figures. And good figuring works. Sewell selects six modern figures for man: temple, labyrinth, gambler, laboratory, language, machine, showing the partiality of each, only to lead into a detailed examination of the cosmic figures: the universe itself, as pole of the I; suffering and effort, as capabilities of the I; love and death, as man's absolute reach.

SHAFER, Jerome A. Recent Work On The Mind-Body Problem. *Amer Phil Quart* 2,81-104 Ap 65.

This paper is a discussion of some of the recent literature on the traditional mind-body problem. First the distinction between the mental and the physical is defended against attacks, especially Ryle's, and it is argued that a significant sense can be given to "mental event," taking thoughts and feelings as paradigm cases. Then the author discusses the question whether machines could have mental events. It is maintained that over and above technical questions concerning the limits of machine output and terminological questions concerning how such outputs should be described, there could still remain the genuine empirical question whether certain very advanced machines had mental events. Turning to some of the mind-body theories most favored at present, the author discusses the identity theory and rejects it, primarily on the grounds that it requires giving spatial location to such mental events as thoughts, and this is not allowed by our present conception of thoughts. Finally some dualistic theories are considered and it is argued that the most plausible ones are Epiphenomenalism and Interactionism.

SHAFER, Jerome. Could Mental States Be Brain Processes. *J Phil* 58,813-822 D 61.

The main contentions of this paper are (1) that mental states cannot be identical with brain processes because they do not occur in the same place, (2) that there is nothing to stop us from making the Identity Theory correct by adopting a convention for locating mental states, and (3) that the question whether it would be useful to adopt such a convention depends upon empirical facts which are at present unknown.

SHAFER, Jerome. Persons And Their Bodies. *Phil Rev* 75,59-77 Ja 66.

In this paper it is argued that a person cannot be taken as a thing with at least some bodily attributes. The argument rests on two premises, (1) that there is a necessary relationship between a person and his mental events such that it is impossible that precisely those events should have occurred but not to that person, whereas (2) there is a contingent relationship between a person and his bodily events such that it is possible that precisely those events should have occurred but not to that person. Now if any mental events were to happen to a bodily thing, then in accordance with (2), they might have occurred but not to the person they in fact did occur to. But this is in contradiction to (1). It is then shown how this basically Cartesian view can deal with problems of the identification and individuation of persons.

SHAH, Idries. *The Sufis.* Garden City NY Doubleday 1964.

SHAHAN, Ewing P. *Whitehead's Theory Of Experience.* NY King's Crown Pr 1950.

After a brief introduction to Whitehead's thought, the author compares Whitehead's early philosophy of science with his later metaphysics in their broader aspects. He then narrows his focus to show the extent to which the explicit theory that is found in the later works is either expressed or implied in the earlier writings, as well as the extent to which it is something new. He clarifies many of the more difficult parts of the later theory and also indicates how the early theory influenced and somewhat distorted Whitehead's general metaphysical position.

SHAHAN, Robert W (ed) and Kovach, Francis J (ed). *Bonaventure And Aquinas: Enduring Philosophers.* Norman 1976.

Three articles treat the thought of Bonaventure: Ewart Cousins studies knowledge through subjectivity, the dynamic nature of God, and divine immanence and transcendence; J F Quinn develops the ethics of virtue in Bonaventure; and the meaning and influence of the Bonaventuran theory of spiritual light are expounded by Ignatius Brady. Two articles concentrate on Aquinas: that God is being in its highest signification is explained by Joseph Owens; and the modernity of Thomistic

- ethics is discussed by Robert Kreyche. Finally three writers compare Bonavenfurean and Thomistic theories of knowledge, divine infinity and the possible eternity of creation.

- SHAPERE, Dudley.** Plausibility And Justification In The Development Of Science. *J Phil* 63,611-620 O 66.
- Through examination of two cases in the history of science—Liebig's introduction of the notion of "vital force" in physiology, and Huygens' introduction of the concept of a "wave" in the theory of light—it is shown that there are sometimes good reasons, in the development of science, for introducing and investigating certain new ideas, even if those ideas do not ultimately "work out"; and furthermore, that those good reasons are in fact comparable, in some cases at least, to sorts of good reasons appealed to in introducing ideas that do "work out." Consequences of this analysis for the attempt to draw a line of demarcation between science and non-science are discussed.

- Published posthumously, this work provides an analysis of the role of reason in human affairs and a systematic study of the influences which tend to distort moral judgment. Basic to the examination of the moral problem contained here is Sharp's thesis that our scheme of values and our desires determine our judgments about conduct and that these judgments can be examined, criticized, and improved by human reason. He has sought to show here the objective validity of ethical judgments which are based on a universal moral consciousness, confirming his theory by testing in concrete cases.

- In a variety of polemical positions on contemporary issues, the authors deal with: nationhood and the rights of individuals, the treatment deserved by Canadian native peoples, the theory and practice of male supremacy ideology, the rights of the private press, the Quebec Bill of Rights, the Marxist-Leninist theory of the rights of nations to self-determination, the similarity or dissimilarity of apes and human beings, the need to democratize the bearing and raising of children, the false ideology of male political potency, different existential ways of life under socialism, stability vs. utopia, and the definition of freedom and a free society.
- SHEA, William R (ed)** and King-Farlow, John (ed). *Values And The Quality Of Life*. NY Science History 1976.
- Comprised of nine essays, this valuable work is concerned with issues related to the "quality of life." The initial articles by McCall and Michalos aim at clarifying the phrase "quality of life". Michalos also discusses efforts to measure the quality of life. A stimulating contribution is O'Manique's "Values for Survival," an examination of ethical issues and ecological problems. L C Green discusses legal conundrums bearing on the quality of life, arguing that in the area of sexuality the law often lags behind social needs.

- A scholarly use of the phenomenological method in an aesthetics of dance. Mrs Sheets bases her method on the work of Merleau-Ponty, Sartre, and her teacher, Eugene Kaelin. She also makes use of the aesthetic theories of Ernst Cassirer and Susanne Langer in giving phenomenological accounts of "the illusion of force," "abstraction," "expression," "dynamic line," "rhythm" and "imaginative space." The last two chapters discuss the educational implications of this approach.
- SHEHADI, Fadieu** and Rescher, Nicholas. Yahyā Ibn 'Adī's Treatise "On The Four Scientific Questions Regarding The Art Of Logic". *J Hist Ideas* 25,572-578 O-D 64.
- SHELDON, Mark.** Logic Of The Self-Evident: Spinoza, Imagination And Metaphor. *Proc Heraclitian Society* 2,62-90 My-Ag 74.
- The paper begins with a brief survey of writing on the topic of imagination in philosophical literature from Aristotle to Ryle. It then focuses on Spinoza's *Ethics*, and argues that Spinoza's theory of imagination is very significant, especially in terms of inadequacies in contemporary literature. In the last part of the paper a theory of metaphor is developed which relates, it is argued, in interesting ways to Spinoza's theory of imagination.

- SHELDON, W H.** The Absolute Truth Of Hedonism. *J Phil* 47,285-303 My 50.
- Hedonism is presented in the article as being the only moral stance, while other moral theorists are simply misguided. The author defines hedonist morality as the maximum intensity and extensity of pleasure. The body of the article addresses how various ethical systems rely on the basic principles of hedonism.
- SHELDON, W H.** The Criterion Of Reality. *Rev Metaph* 1,3-37 Mr 48.

SHELDON, Wilmon Henry. *Agapology: The Rational Love—Philosophy Guide Of Life.* Boston Christopher 1965.

A development of C S Peirce's metaphysics of tychism and agapasm. Sheldon considers love the polar union of reason and chance and presents at length a version of the ontological argument based on chance as ultimate. In the final chapter he argues that Christian love, in spite of appearances to the contrary, has been increasing in the world.

SHELDON, Wilmon Henry. *America's Progressive Philosophy.* New Haven Yale Univ Pr 1942.

Professor Sheldon argues that today's process-philosophy, which is rooted in developments of thought since Galileo, is a means towards maintaining the compossibility of traditional incompatibles. This process-philosophy, which has achieved its fullest development in American philosophical thinking, insists upon the ultimacy of incremental change in reality and thereby lays the foundation for a description of reality as in process, becoming ever-richer, increasingly significant.

SHELDON, Wilmon Henry. *God And Polarity: A Synthesis Of Philosophies.* New Haven Yale Univ Pr 1954.

This work endeavors to end "the perennial deadlocks of metaphysical systems" by an inclusive graded array of polar opposites ranging from inanimate matter to the Deity. In spite of man's incurable addiction to part-truths as if they were whole-truths, "there is no one exclusive principle, point of view, method, which gives the clue to the make-up of the real world." The author pleads for a more generous, synthetic approach to a "general plan which might admit the lasting truth of each of the schools," and embarks upon an exhaustive analysis of such counterpart pairs as idealism-materialism, Thomism-process, monism-pluralism, and rationalism-irrationalism. He contends that both the contemporary analytic philosophers and the existentialists have "lost the sense of reality, the one forgetting, the other denying it."

SHERBURNE, Donald W. *A Whiteheadian Aesthetic: Some Implications Of Whitehead's Metaphysical Speculation.* New Haven Yale Univ Pr 1961.

Whitehead's philosophical system is expounded in four preliminary chapters, with particular emphasis on the conception of "conrescence," while the remainder of the book develops an aesthetic theory based upon this system. It is argued that all aesthetic discourse should be grounded in metaphysical theory and that Whitehead's philosophy shows its fruitfulness in generating aesthetic analysis. The author's themes are that "the work of art has the ontological status of a Whiteheadian proposition" and "aesthetic experience is experience, the subjective aim of which is to re-create the proposition objectified in the performance of a work of art." This was a Ph D dissertation at Yale with one added chapter.

SHEROVER, Charles M. *Heidegger, Kant And Time.* Bloomington Indiana Univ Pr 1971.

This study seeks to trace key concepts and formulations of *Being and Time* from Heidegger's interpretation of Kant. Focusing on the concept of time in the First Critique, it effectively argues that Heidegger's work can be understood as a development of transcendental philosophy. By suggesting a reconstruction of the Critical philosophy centered about the concept of time, it proposes some key issues for contemporary consideration of the nature and significance of time in human experience and of issues related to it.

SHEROVER, Charles M. *The Human Experience Of Time: The Development Of Its Philosophical Meaning.* NY New York Univ Pr 1975.

This volume is a compendium of anthological selections which are strung together with connecting essays by the author. It is divided into eight principal sections dealing with the following topics: introductory considerations, time and motion, time and understanding, time and reality, the analysis of temporal concepts, experiential time, the structure of experiential time, and a brief concluding chapter intended to outline open questions. The work is more than an historical survey, since Sherover's own connecting essays are philosophically critical and expansive.

This book contends that emotions involve reason and reason is in some ways emotion, whereas feelings are something different. Assessment should and properly does precede emotion. The critique ranges over mind, body, language, pleasure, sensation, action, cause, reason, expression, and related concepts, exhibiting their uses and misuses as in metaphor, fallacies and the like.

SHIBLES, Warren. *Wittgenstein: Language And Philosophy.* Dubuque IA Brown 1969.

SHIDELER, Emerson W. *Believing And Knowing.* Ames Iowa State Univ Pr 1966.

This volume provides a view of the relation between religion and science which distinguishes them in terms of levels. It is argued that knowledge in both realms is created by interaction between knower and known. In science, knowledge is what is accepted by the community of scientists; in religion, it is right relationship with God. The aim of scientific knowledge is to tell us how the world is, reducing our tensions by giving us a definite framework in which to act. The aim of religious knowledge is to tell us what our lives mean, reducing our tensions by giving us a definite framework in which to live. Science is thus on a lower, but not less true, level than religion. The difference in levels apparently provides for the compatibility of the two realms.

This article attempts to highlight deficiencies in the appreciation of the roles of social conflict reflected in "structural-functional" social analysis, particularly as practiced by Talcott Parsons. This aim is achieved through a review of John Dewey's social philosophy. Particular attention is given to Dewey's views of intelligence as problem-solving behavior, social conflict as the signal of the need for timely change, and the growth of individuals in association requiring periodic modifications in current social arrangements.

SHKLAR, Judith N. *After Utopia; The Decline Of Political Faith*. Princeton NJ Princeton Univ Pr 1957.

The author devotes most discussion in this book to Romantic and Christian social despair because they offer, she believes, the clearest expression of the contemporary mood. The author, to complete the picture, gives an account of the decline of liberal and socialist thought.

SHKLAR, Judith N. *Between Past And Future*, By Hannah Arendt. *Hist Theor* 2,286-291 1963.

SHKLAR, Judith N. *Legalism*. Cambridge Harvard Univ Pr 1964.

This polemic against legalism treats it as an ideology or set of beliefs and value preferences: a belief that morality consists of obedience to moral rules; law is an ideologically neutral system of rules that can be understood and applied by purely formal analysis; politics is a dirty affair of expediency, ambition, and coercion to be limited as much as possible by the rule of law; and philosophy ought to devote itself to an analytic process aimed at uncovering the real meaning of words. Legalism is a fundamental ingredient in both analytic jurisprudence and natural law theory, in both Hart and Fuller. Legalism is always conservative in its effects, since it bases law, etc., on prior agreements and conventions. The author argues that law and justice have a definite, limited place in a certain kind of political order, but that this place can be properly appreciated only from a combined legal-political standpoint that is itself non-legalistic.

SHOEMAKER, Sydney. *Self-Knowledge And Self-Identity*. Ithaca NY Cornell Univ Pr 1963.

The central topic of this book is that of personal identity. The discussion begins with the question of self-knowledge and its relation to the body. Whether selves are substances is then studied. Subsequent topics are the self and the contents of consciousness, self-identity and memory-contents, personal identity and the concepts of mind and body, and finally the possibility of self-knowledge. A contention of the book is that different theories about the self are really attempts to explain how self-knowledge is possible.

SHOENFIELD, Joseph R. *Mathematical Logic*. Reading MA Addison-Wesley 1967.

This book is a text in logic, intended for graduate students in mathematics. It covers the central topics in logic, including recent results. These topics are proof theory, model theory, recursive functions, the axiomatic foundations of number theory, and set theory. Completeness and decidability are treated thoroughly. The section on set theory contains proofs of the independence of the continuum hypothesis and the axiom of choice. There are many exercises which cover important topics, supplementing the expository material.

SHOPE, Robert K. Prima Facie Duty. *J Phil* 62,279-286 My 65.

It is argued that there are exceptions to moral principles, and that, because of this fact, a certain ambiguity in the account W D Ross gives of prima facie duty is harmful. Far, in cases where there are exceptions to moral principles, this ambiguity leads to contradictory judgments as to which actions are prima facie duties. This ambiguity is explained and it is then argued that several attempts to make it harmless by not admitting exceptions to moral principles are unsuccessful. Finally, a way of eliminating the ambiguity in order to develop a useful conception of prima facie duty is proposed.

SHUTE, C W. *Psychology Of Aristotle*. NY Columbia Univ Pr 1941.

This book gives an interesting, brief exposition of the psychology of Aristotle, with a discussion of the generation of the organism, the growth of the organism, the initiation and control of behavior, the activities of the organism, and the metaphysical analysis of the living being. "The aim of the present study is not to discuss and to seek a solution for the questions which have arisen in the historic expositions of Aristotle's psychology. It is rather to follow the way in which Aristotle himself develops his treatment of behavior as one aspect—and that the most essential one—of living things in general."

SHUTE, Clarence William. *The Psychology Of Aristotle: An Analysis Of The Living Being*. NY Columbia Univ Pr 1941.

The new series of studies in philosophy opens well with Professor Shute's straightforward, scholarly account of Aristotle's psychology. The study shows how Aristotle "develops his treatment of behavior as one aspect—and that the most essential one—of living things in general," and how he interpreted behavior "in terms of interaction between the organism and the environing world." After an account of the basis of behavior in the generation and growth of the organism, the central topic of the book is reached in Chapter III, "The Initiation and Control of Behavior." Aristotle's analysis of action, as directed toward an end by means of appetite and deliberation, is neatly translated into the terms of "ideomotor activity," "intelligent response to a stimulus," and "environmental context."

SHWAYDER, D S. *Modes Of Referring And The Problem Of Universals: An Essay In Metaphysics*. Berkeley Univ Of Calif Pr 1961.

This monograph is addressed to the problem of universals. The method is to discover what properties and universals are by finding out what is peculiar and characteristic

in referring to properties and numbers. Chapter I defines referring as a use of words in a language act, and elucidates topics preliminary to a theory of referring: the criteria for the existence of objects, relations between different forms of statement, the departments of language. Chapter II considers some general forms of reference and their application. As applications, proper names, pronouns, definite descriptions, adjectives, numbering numerals, are examined. Chapter III discusses properties. According to this discussion, it is not necessary to provide criteria for the existence of properties. The last chapter is devoted to metaphysical puzzles in the philosophy of mathematics.

SIBLEY, Frank. Aesthetic And Nonaesthetic. *Phil Rev* 74,135–159 Ap 65.

Sibley examines several relationships, logical, quasilogical, and contingent, between aesthetic properties and nonaesthetic properties. His general conclusion is that because of the complexity of an aesthetic object, we can never legitimately argue, solely from the presence of certain nonaesthetic properties in something, to the presence of certain aesthetic properties in that thing.

SIBLEY, Frank. Aesthetic Concepts. *Phil Rev* 68,421–450 O 59.

SIBLEY, Frank. Aesthetic Concepts: A Rejoinder. *Phil Rev* 72,79–83 Ja 63.

Sibley responds to Schwyzer's criticisms ("Sibley's 'Aesthetic Concepts,'" *Philosophical Review*, Volume 72, Pages 72–78), claiming that they misinterpret him. Sibley was not concerned with verdicts like "That movie is fine." He did not describe aesthetic aesthetic terms as "evaluative" and non-aesthetic terms as "descriptive." And he did not hold that an aesthetic remark always involves the use of an aesthetic term.

SIBLEY, Frank. Aesthetics And The Looks Of Things. *J Phil* 56,905–914 N 59.

SIBLEY, Jack R. Rudolf Otto As A Precursor Of Process Theology. *Encounter* 30,223–240 Sum 69.

The article relates the thought of Rudolf Otto directly to the British empiricist philosophers in as much as many students of theology seem unaware of the 'emergent naturalism' inherent within his thought and theology. The one-order theory of reality held by the empiricists (and process philosophy) becomes the basis for him of a more adequate understanding of the relationship of nature and grace—or of God's relationship to the world. Out of this comes a clear affirmation of Pan-en-theism. This is also seen in what is here called 'emergent eschatology' in which the history of mankind is seen to be "a process of constant becoming."

SIEGLER, F A. Demos On Lying To Oneself. *J Phil* 59,469–474 Ag 62.

Appealing to his analysis of interpersonal deception, Professor Demos examines a kind of self-deception that has the same features as interpersonal deception. He concludes that in self-deception "the belief and the disbelief are simultaneous and both exist in the consciousness of the person." The first section of this paper is concerned to show that the cases cited by Demos as evidence for his conclusion are not cases in which we must attribute contradictory beliefs to a man at the same time. The second section of the paper argues that the ordinary use of reflexive deception expressions does not fit Demos's analysis of interpersonal deception expressions.

SIEGLER, F A. Self-deception And Other Deception. *J Phil* 60,759–763 N 63.

Canfield and Gustavson (*Analysis*, Volume 23, 1962) defend the thesis that the notion of self-deception is odd and radically different from that of interpersonal deception. The present paper exposes a number of weaknesses in that defense. Canfield and Gustavson's model of interpersonal deception contains features not necessary to interpersonal deception, and there are various problems for Canfield and Gustavson's interpretation of self-deception. It is agreed that there is something

peculiar about self-deception and that it is somewhat different from interpersonal deception, but it is suggested that there are more similarities than differences.

SIEGLER, Roderick A. Lying. *Amer Phil Quart* 3,128–136 Ap 66.

A systematic investigation of six features of a typical case of lying as they relate to ten locutions in which "lie" or a cognate appears. The investigation is into which, if any, of these features are necessary conditions for the correct application of the different locutions. Several tentative general conclusions are reached.

SIKORA, Joseph J. *Inquiry Into Being*. Chicago Loyola Univ Pr 1965.

Fundamental to this metaphysical study, according to its preface, is "the characteristically Thomist contribution of the understanding of the existential act of things and of that superabundance of existential act which is activity." Besides a number of Scholastic writers, the author acknowledges a debt to the positivists (Humes and the Vienna Circle), phenomenologists (Husserl and Sartre), idealists (Kant, Cassirer), existentialists (Marcel, Heidegger, Buber), and the Upanishads. Since the book is not documented, it is not easy to determine which of the Thomists is most important to its argument. Central in this argument are "metaconcepts" of various key items in reality. Thus, several complicated formulae suggest definitions of being, essence, activity, and such notions. Later, ten "Ways" of reaching "philosophical transcendence" (God) are presented. Many other special problems (including divine providence and moral evil) are treated at the end of the book.

SILBER, John R. The Importance Of The Highest Good In Kant's Ethics. *Ethics* 73,179–197 Ap 63.

Lewis White Beck's *A Commentary on Kant's Critique of Practical Reason* overlooks the fact that some of the ideas most important to Kant's ethics are not presented in the second *Critique*. It also lacks a necessary emphasis on the notion of the highest good, the unifying theme of the work as a whole. The author traces the role of this concept throughout the second *Critique* and shows how Kant developed the content of the idea of the highest good in the combined notions of perfection as the moral good and happiness as the natural good.

SILVERMAN, Hirsch Lazaar. *Philosophy: Its Significance In Contemporary Civilization*. Boston Humphries 1946.

The author has "...attempted a rationalization of the necessity of a philosophic attitude in understanding our present economic, political, and social conditions." He roams at will over collectivist and individualistic emphases without enabling the reader to pick from his acknowledged idealist leanings, his own essential emphasis. "In spite, then of all the record of the past, the great philosophical revolution is still to come. It will ensue when men collectively and cooperatively organize their

- knowledge for application to achieve and make secure social values... Individualism, however, in almost every activity, is one of the most fundamental of human traits."
- SILVERMAN, Hugh J.** Artistic Creation And Human Action. *Mosaic* 8,157-164 nd.
- The action of man is a creation of human significations; the creation of a work is the action of an artist. Human significations remain those of the person who created them; aesthetic significations are those of the work which is created through action. I show that the creation of human significations is the formation of a person because to act as a man is to create the man, and that artistic action is the formation of the work of art because to create the work is to act as artist.

- SIMON, Michael A.** The Matter Of Life: Philosophical Problems Of Biology. New Haven Yale Univ Pr 1971.
- This philosophical inquiry into some of the main problems of biological science first focuses on the relationship between biology and the physical sciences, and its status as a science in its own right; it then analyzes the types of explanation used in biology, and their logic. Consideration of the nature and role of theoretical models follows, with particular reference to the history of genetics. Finally, there is an assessment of the presuppositions of biology and an examination of the limits and some implications of extending biological concepts to other areas of thought and action, especially with regard to human concerns.

- SIMON, W M.** European Positivism In The Nineteenth Century: An Essay In Intellectual History. Ithaca NY Cornell Univ Pr 1963.
- This book is a study of the diffusion and influence of the philosophy and the religion founded by Auguste Comte, and of the numerous adherents and quasi-adherents of these beliefs. Since this is a work in history and not in philosophy, it is perfectly clear about the superficialities and question-begging propensities of Positivism, without undertaking any careful analyses of meanings, arguments, or evidence for this philosophy.
- SIMON, W M.** The 'Two Cultures' In Nineteenth-Century France: Victor Cousin And Auguste Comte. *J Hist Ideas* 26,45-58 Ja-Mr 65.
- This article outlines the tension between science and the humanities in Nineteenth century France. The author's thesis is that after the Revolution, the separation between the "two cultures" grew wider, because the Revolution had undermined Catholic orthodoxy which up to that point had kept them in closer harmony. With the rise of secularism, Cousin and Comte offered different answers. Cousin, a moderate liberal, supported constitutional monarchy and Natural Religion; Comte, a technocratic authoritarian, invented a "scientific religion" to provide a non-theological form of worship. The author's conclusion is that a careful analysis reveals more points of similarity than difference; both provide what they take to be the only source of social salvation.

- SIMON, Yves R.** A General Theory Of Authority. Notre Dame Notre Dame Univ Pr 1962.
- The late Professor Simon here argues for the necessary role of authority in common action, in the search for knowledge, and in the passing on of such excellence as man attains. Action relies upon authority, not only for the common good, but more especially for the preservation of the good that comes from particular activities and ends. Knowledge, in turn, must depend upon witnesses and teachers; and the conditions for gaining knowledge must be protected by the state. Finally, political-ethical excellence requires for its perpetuation a reasonable system of subordination.
- SIMON, Yves R.** Freedom And Community, Charles P O'Donnell (ed). NY Fordham Univ Pr 1968.
- In these six essays freedom and its bearing on authority are stressed.
- SIMON, Yves R.** Freedom Of Choice, Peter Wolff (ed). Bronx NY Fordham Univ Pr 1969.
- A free act is often thought to be an act without a cause; the prototype of such an act is the swerve of the atom in Democritean physics. But this is wrong. Freedom of choice consists in the indifference of practical judgment. This indifference is a dominating one; it originates not in any indetermination of intellect or will but rather in the natural superdetermination of the rational appetite. Such free choice is not an exception to the law of causality. A free act exhibits all the characteristics of a caused act: Cause and effect differ from one another, cause and effect resemble one another, and the cause acts insofar as it is in act.
- SIMON, Yves R.** Philosophy Of Democratic Government. Chicago Univ Of Chicago Pr 1951.
- This is a work in the scholastic tradition but addressing the modern situation of democracy caught between totalitarianism and anarchistic liberalism. The argument's cornerstone is a theorem on the complementarity of authority and autonomy: authority must be established and accepted if a society wishes to accomplish some common good, since it can accomplish no good unless its members freely pursue their own interests on the private level. Although it may be transmitted, authority belongs by nature to the entire society, for whose good it is necessary. However, the use of authority for private ends is a perversion which the democratic revolution attacks, advocating universal suffrage and equality of opportunity to abolish exploitation. The tendency of modern technology to lead to totalitarian government calls for the maintenance of rural life to preserve the balance of autonomy and authority.
- SIMON, Yves R.** The Tradition Of Natural Law, A Philosopher's Reflections. NY Fordham Univ Pr 1965.
- At the center of the tradition of natural law lies the conviction that there is an objective and universal justice which transcends particular historical expressions of justice. This tradition presupposes that man has a nature as well as a history. To clarify some of the confusion surrounding this perennial debate, Simon distinguishes between ideology and philosophy, examines the historical adventures of natural law, and analyzes its most important theoretical problems. Without being unduly optimistic about the current revival of interest in natural law, he is convinced that, properly handled, the theory of natural law could be very helpful in approaching the problem of social justice in our times.

- SIMON, Yves R.** Common Good And Common Action. *Review Of Politics* 22,202-244 Ap 60.
- Authority does not originate in human deficiency, but in the nature of human community. Communities pursue the common good through common action and life together; therefore, authority is necessary to unify action. First, authority plays an essential role when the means to the common good are several, by unifying practical judgment in selecting the best means. Second, authority's most essential role lies in determining the common good itself. Each person must will the common good formally and his particular good materially, but the matter of the common good is determined by authority. Thus, both authority and personal autonomy are preserved.
- SIMON, Yves R.** From The Science Of Nature To The Science Of Society. *New Scholas* 27,280-304 Jl 53.
- SIMON, Yves R.** Introduction To The Study Of Practical Wisdom. *New Scholas* 35,1-40 Ja 61.
- To establish the fundamental theory of practical wisdom or prudence, we shall study the ultimate practical judgments made when people decide how to act. Such judgments are the form (in the Aristotelian sense) of the ensuing action and are characterized as synthetic (of an essence and existence) and complete. The truth, validity, and certainty of practical judgments are closely related, exist in practical and theoretical modes, and are affected by various factors. Practical judgments are

ultimately determined not by cognition but by inclination. Here the intellect is the disciple of love; it is a matter of affective connaturality. So, prudence, the intellectual habitus that alone guarantees the truth of practical judgments, is a virtue in the most proper sense. So too, since ultimate practical judgments admit of no logical connection with premisses, they are incommunicable. Nevertheless, the moral life is animated by an aspiration toward the most rational modalities of fulfillment.

SIMON, Yves R. Work And Wealth. *Review Of Politics* 2,197–217 Ap 40.

The production of wealth; i.e., any physical reality exterior to man favorable to the support of human life, is the objective and primary function of work. To fulfill this end the products of work must be adapted to human nature; there must be an abundance of goods, and the goods must actually be used. Thus, the service of wealth is superior to its profit. Modern economic conditions separate the two and tend to promote the primacy of profit. Modern industrial economy, producing an abundance of goods, tends to create unemployment. Hence, free distribution must increasingly supplement an exchange economy.

SIMON, Yves R. Work And Workman: A Philosophical And Sociological Inquiry. *Review Of Politics* 2,63–86 Ja 40.

Metaphysically, manual work is a useful activity, lying in the realm of Becoming and Time, the result of which is outside the worker. Contemplation, however, is an end in itself, hence useless and beyond Time and Becoming. Mental work, lying between contemplating and manual work, may have the characteristics of manual work, but it is less of a work. Sociological inquiry produces parallel distinctions. Ethically, work belongs to the order of legal fulfillment, contemplation to the order of free expansion. Joy in work is natural, but unsteady. Work is not irksome in itself, but possible irksomeness is a permanent principle.

SIMON, Yves. The Nature And Functions Of Authority. Milwaukee Marquette Univ Pr 1940.

This is a clear and concise discussion of the essential function of authority. After indicating the substitutional functions of authority that result from some deficiency in the subject, the author states its essential function, namely, to assure the unity of action of a united multitude. Such unanimity may be obtained not by coercion, but by persuasion, and, to that extent, is perfectly compatible with liberty. The argument is stated with logical precision and supported by references to various scholastic writers including, naturally, Thomas Aquinas.

Philosophical problems involved in asking whether electrodynamics can be reduced to mechanics are not of the sort Professor Nagel claims (*The Structure Of Science*) are generated by the attempt to state the theory of thermal phenomena in purely mechanical terms. This is not to say that there are no philosophical problems connected with temperature. It is possible to say that a problem arises because of a reduction, but the reduction is not of thermodynamic temperature to mean kinetic energy of molecules; it is of sensible quality to physical property measured by thermometers, a reduction that leaves the sensible qualities without a locus in the physical world.

SINAIKO, Herman L. *Love, Knowledge And Discourse In Plato: Dialogue And Dialectic In Phaedrus, Republic, Parmenides*. Chicago Univ Of Chicago Pr 1965.

The author builds his argument on the following analogy: Socrates' relationship to his interlocutors within the dialogues must be regarded as the prototype of the relationship Plato meant to establish to his readers. Sinaiko begins with the thesis that Plato's position toward "written" philosophy is precisely what it is said to be in the *Seventh Epistle*, and then proceeds to discuss the philosophical value of the dialogues while admitting that Plato never committed his philosophical ideas to writing. This book is an answer to the question "If the dialogues are not philosophy, what are they and what is their relation to Plato's thought?" The dialogues are taken as dramatic representations of the philosophic endeavor as Plato understood it. The author states that the dialogues are among the "most carefully written, tightly structured, and perfectly organized dramatic works in Western literature, works containing nothing accidental, irrelevant, or unnecessary."

SINARI, Ramakant A. *The Structure Of Indian Thought*. Springfield IL Thomas 1970.

R Sinari's thesis is that Indian philosophy is basically inner-directed, rooted in Vedic thought and transphenomenal, however the varied ways this has been developed historically, e.g., in the *darśanas*. He briefly examines Indian theories of causal relations, personality, māya (Phenomenal illusion), ethical action as a metaphysical duty, various epistemological doctrines and "bhakti" [religious devotion] as an antidote to excessive intellectuality. He quickly examines these themes in traditional Vedānta (Sankara), Nyāya, Madhyamika, and Vedānta Buddhism, Jainism and modern figures since the eighteenth century. Sources are referred to in notes.

SINARI, Ramakant. *Reason In Existentialism*. NY Humanities Pr 1967.

SINARI, Ramakant. Some Reflections On Philosophy In India. *Phil Phenomenol Res* 26,438–448 Mr 66.

Sinari's remarks deal with the Western reaction to Indian Philosophy, and especially with the interaction from the particular Western points of view. It is concluded that the Indian orthodox metaphysics of revealed scriptures may crumble against the pressures of the questions of the present, and the awakening of independent thinking. What will be retained is probably some sort of religion of humanism.

SINGER, Beth J. *The Rational Society: A Critical Study Of Santayana's Social Thought*. Cleveland 1970.

Santayana's writings on society and politics are shown to provide a special insight into his philosophic system and to underscore some of the limitations of epiphenomenalism. Santayana's political and social theories are related to his general metaphysics. His "conservatism" is shown to be an outgrowth of his "naturalism." Both *Reason in Society* and *Dominations and Powers* are studied in detail. The underlying systematic structure of the latter work is revealed. Santayana's earlier and later social philosophy are compared and related.

SINGER, Dorothea Waley. *Giordano Bruno: His Life And Thought*. NY Schuman 1950.

SINGER, Edgar Arthur. *In Search Of A Way Of Life*. NY Columbia Univ Pr 1948.

SINGER, Irving. *Santayana's Aesthetics: A Critical Introduction*. Cambridge Harvard Univ Pr 1957.

This is a critical exposition of Santayana's aesthetics and philosophy of art. His early writings on aesthetics are evaluated from the point of view of his later epistemological writings. The relevance of the distinction between essence and existence to Santayana's aesthetic theory is exhibited. This theory is then shown to be consistent with a general intuitionistic tradition in contemporary thought. The book closes with criticisms of this tradition, and suggestions for a new approach to the problems which Santayana's intuitionism does not satisfactorily solve.

SINGER, Marcus G. Duties And Duties To Oneself. *Ethics* 73,133–142 Ja 63.

In this article the author considers objections raised against his argument that there are no moral duties to oneself. He defends the claim that if A has a duty to B, then B must be able to release A from this obligation (against the criticisms of Daniel Kading). Secondly, he responds to Warner Wick's contention that his argument applies only to legal duties and not to moral duties and to Wick's further claim that

- moral duties are such that one can never be released from them. Finally, he responds to Mary Mothersill's claim that his view depends on the assumption that one can be released from a moral duty in the way that one can be released from a legal duty.
- SINGER, Marcus George.** *Generalization In Ethics: An Essay In The Logic Of Ethics, With The Rudiments Of A System Of Moral Philosophy.* NY Knopf 1961.
- This book is an elaborately extended analysis of what Singer believes to be the basic form of moral argument: *If everyone did that, the consequences would be undesirable, therefore you ought not to do that.* This argument in conjunction with several principles of a modified utilitarianism are interpreted as grounding rational morality. The place of reason in ethics, classical utilitarianism, the distinction between moral rules, laws, and principles, and the distinction between prudence and morality are discussed in detail.
- SINGER, Marcus G.** Formal Logic And Dewey's Logic. *Phil Rev* 60,375-385 JI 51.
- SINGER, Marcus G.** Hart's Concept Of Law. *J Phil* 60,197-219 Ap 63.
- H L A Hart (*Concept of Law*) analyzes a legal system as a union of primary rules, which impose duties, and secondary rules, which confer powers. It is argued that this distinction and classification of rules are not sufficient for an adequate clarification of a legal system. Legal systems are more complex than envisaged by this scheme, and Hart's reduction imposes upon the variety of laws a spurious duality. Moreover, to conceive of law as consisting of rules, entirely, does not take into account other legal propositions. Other criticisms are directed at Hart's discussion of criteria of legal validity and the relation of law and morality.

- SINGH, Bhagwan B.** *The Self And The World In The Philosophy Of Josiah Royce.* Springfield IL Thomas 1973.
- This work is an examination of Royce's philosophy including his views on Indian philosophy. The author is critical of Royce's idealism and defends the materialistic and naturalistic schools of Indian thought. The book is divided into five chapters: an introduction; a chapter on Royce's life [1855-1916] and background; a somewhat general examination of Royce's metaphysics, epistemology and ethics; a brief chapter entitled "Royce and Indian Philosophy: Upanisads, Samkhya, and Buddhism," and a conclusion wherein the author suggests "that it is possible to develop a theory of the Self and World without accepting any of the basic idealistic presuppositions of Royce's theory."

- SINHA, D.** Phenomenology And Positivism. *Phil Phenomenol Res* 23,562-577 Je 63.
- This article points out parallels between phenomenology and positivism. The latter emphasized the given as the real source of knowledge and was free from ideal presuppositions. Phenomenology refers back to evidence, immediate "seeing," but not just the sensuous; it is seeing in general, as originally given in consciousness. The problem posed here is whether universals or general essences can be considered as given in the genuine sense of the term. Husserl thinks they can be, and in saying so, he argues that positivism was prejudiced in not accepting anything other than particular, empirical sense-data. It was the prejudice of traditional empiricism that only the individual could be originally intuited.
- SINISI, Vito F.** Nominalism And Common Names. *Phil Rev* 71,230-235 Ap 62.
- Edwin Allaire, Gustav Bergmann and Reinhardt Grossmann have objected to the nominalistic analysis of "This is red and that is red" which treats "red" as a common name. Such an analysis, they argued, must assimilate the copula in this sentence to the "is" of identity. Sinisi claims that this objection is mistaken. Using a logical system developed by Stanislaw Lesniewski, he shows that it is possible to construe "red" as a common name without taking the copula as the "is" of identity.
- SINISI, Vito.** "e" And Common Names. *Phil Sci* 32,281-286 JI 65.
- SINNOTT, Edmund W.** *Matter, Mind And Man; The Biology Of Human Nature.* NY Harper 1957.
- In this book a distinguished botanist and biologist addresses himself to the question, "What is man?" Believing that neither Christian orthodoxy nor humanism alone can compass all of man's characteristics, the author attempts to unify what seem to be divergent views. His aim is "to fit man into the universe of matter, mind and spirit." His basis of unity is a "philosophy of telism" and a view that "only in God can man be fulfilled." The work begins with an examination of biological themes and then discusses in turn mind, self, creativeness, freedom, spirit, beauty, right, the divine spirit, sin, pain, evil and death.
- SINNOTT, Edmund W.** *The Biology Of The Spirit.* NY Viking Pr 1955.
- In pursuit of a philosophy which is both scientifically sound and "truly religious," the author proposes a theory which will, he believes, eliminate the deplorable dualism between the physical and the mental. The theory, which is not original with him, is that the physical and the mental are two aspects of the same thing: "the basic regulatory character all living stuff displays." All of man's activities are expressions of the drawing power of goals, and hence are but modes of the organic purposiveness displayed by biological process in general. The manifestations of man's "spirit" in art, morality, and religion are parts of the same kind of goalseeking activity found in protoplasm, although "elevated far above its simple origin."

- SIRCELLO, Guy.** Perceptual Acts And Pictorial Art: A Defense Of Expression Theory. *J Phil* 62,669-677 N 65.
- Monroe Beardsley has applauded the Expression Theory of Art for calling attention to the fact that "feeling qualities" are applicable to works of art. However, he says, to say that work X expresses feeling quality Y is to say nothing more than that X has Y. But Beardsley presupposes that feeling qualities are applicable only to visual designs and represented objects in pictorial works. However, by examining some art critical statements, feeling qualities are found to apply to "virtual" perceptual acts in paintings. These acts are not actual perceptual acts of critics, artists, or beholders of the paintings. Although there is no standard term for the relation between visual design and virtual act of perception, a sense of "expression" can appropriately be extended to cover this relation.

- SKINNER, Burrhus Frederic.** *Beyond Freedom And Dignity.* NY Knopf 1971.
- SKINNER, John E.** *Self And World: The Religious Philosophy Of Richard Kroner.* Philadelphia Univ Of Penn Pr 1962.
- Kroner's contribution to religious thought is his doctrine of heautology, or logic of the self. It is non-speculative metaphysics that rests on the recognition of the primacy of the self. Tension between the world and self leads to antinomies such as freedom and necessity, time and eternity. Logic is the outcome of selfhood so that logical contradiction implies self-contradiction. And the laws of identity and contradiction are logical categories of selfhood. The solution to the human problem of the mystery of existence lies in the realm of religious faith, for philosophy and culture cannot effectively do this. That religious philosophy can be faithful to critical philosophy is held by Kroner, while denied by secular philosophy. Ultimately the primacy of Christ leads the religious philosopher to exclaim "My Lord and My God!"

SKINNER, John E. *The Logocentric Predicament: An Essay On The Problem Of Error In The Philosophy Of Josiah Royce.* Philadelphia Univ Of Penn Pr 1965.

Skinner discusses Royce's solution to the problem of error. He examines the approaches of common sense, of realism and of pragmatism to this problem, and finding them unsatisfactory, he contends that Royce's objective idealism offers the correct solution. Skinner names what he holds to be the core of Royce's thought "the logocentric predicament." Skinner writes in the following vein: "Only the Logos which expresses itself in and through the totality of reality but yet is not exhausted by this expression is actually the presupposition of our deepest doubt. Royce personifies the logos idea by calling it the Infinite Self...."

SKLAR, Lawrence. *Space, Time And Spacetime.* Berkeley Univ Of Calif Pr 1974.

A major aim of this book is to establish the interdependence of philosophy and science; not only that good philosophy cannot be done in ignorance of science; but that many decisions in science have philosophical overtones. Chapter I is an introduction. Chapter II contains a brief survey of various historical positions on the nature of geometry as well as an extended discussion of the conventionalist thesis. Chapter III discusses the contributions of Newton, Leibniz, Mach and Einstein among others and focuses on the Newtonian claim that the question of the reality of absolute space is partially an experimental and not merely a philosophical question. Chapter IV discusses the impact of the special and general theories of relativity on basic philosophical issues. Chapter V discusses the impact of scientific investigations in resolving the nature of temporal priority. Chapter VI spells out the morals of Sklar's story.

SKOLIMOWSKI, Henryk. Analytical-Linguistic Marxism In Poland. *J Hist Ideas* 26,235-258 Ap-Je 65.

This article traces the history of influences on and developments in Polish philosophy after World War I. The author believes that analytical philosophy took a different course in Poland than in Vienna because both linguists and philosophers in Poland were concerned with the relation to reality of their investigations. He believes that with the more recent influence of Marxism in 1951-1955, analytical philosophy changed but was not stifled. He concludes that since 1955, linguistic and Marxist philosophies have started to be joined together in a unique fashion which merits observation.

SLAATE, Howard A. *The Pertinence Of The Paradox: A Study In The Dialectics Of Reason-In-Existence.* NY Humanities Pr 1968.

This is a study of the dialectical tensions and contradictions in human existence and modern culture. It is best treated as paradoxical from the standpoint of an existence-oriented reason. Demonstrating the paradox as an inevitable trope of thought, the work exposes both intensively and extensively the clash of ideas in a philosophy true to concrete existence, and shows that reason's biggest problem is itself. The purpose is to set forth a balanced type of existentialism favorable to an epistemology that stands between critical realism and phenomenology. The work modifies the Kierkegaardian either/or dialectics in favor of a both/and tension, which is unique. It is hailed by the German philosopher Richard Kroner.

SLAATE, Howard A. *Time And Its End: A Comparative Existential Interpretation Of Time And Eschatology.* NY Vantage Pr 1962.

This book is a comparative existential approach to the religious philosophy of time and the end of time. The purpose of the book is to show the uniqueness of existential time and how it lends itself to an eschatology of a view of chronos and history as

realistic (critically) while given ultimate meaning in terms of *Kairos* and *Eschaton* related to eternity. A realistic future is allowed for, while a meaningful goal for history is seen possible only as eternity 'touches' time existentially and gives a transcendent quality to the end of history. It is comparative in dealing with various pro-existential religious philosophers while also showing the deficiencies of a philosophy of time, since a theological reference to eternity is needed to give time and history meaning and direction.

SLAATTE, Howard A. *Modern Science And The Human Condition.* Santa Barbara CA Intelman Books 1974.

The purpose is to set forth a basic philosophy of science without the split-hairs of symbolic logic and to show the existential and phenomenological involvements of the scientist with what he knows and how he knows it. Slaatte keeps alive the fundamental findings of the modern sciences in relation to long-standing and current issues in philosophy and moves from epistemological to metaphysical questions followed by a concern for ethical implications. Moving from "How do we know the sciences" to "How do we view the physical order today" to similar issues in cosmogony, biology and psychology, the project then considers such ethical questions as whether the scientist is amoral, whether he is in any way involved in values and whether science should be controlled.

SLAATTE, Howard A. *The Paradox Of Existentialist Theology.* NY Humanities Pr 1971.

This book is a religious sequel to the philosophical approach of *The Pertinence of the Paradox*. Similarly involved in the existentialist exposure of the significance of the paradox, it relates the both/and paradox to cardinal issues in Christian existentialism with both appreciation and serious criticism of the Kierkegaardian dialectic. Theologically, the purpose is to balance up many of the doctrinal and biblical issues that have been posed by theologians from Kierkegaard to Barth to Bultmann and Tillich. As a study of a faith-subsumed reason-in-existence, it gives answers to issues left unresolved by a naked philosophy of existence. Revealed truths are shown to shed light on existence where the latter is obscure. Secular existence is made amenable to the sacred.

SLAATTE, Howard Alexander. *The Pertinence Of The Paradox: The Dialectics Of Reason-In-Existence.* NY Humanities Pr 1969.

The "comparative" character of this work is that its procedure is essentially that of comparing the views of other thinkers with those of Berdyaev, who, in the author's judgment, "is the one thinker who has seen how the persistent problems of philosophy which go unanswered demand theological answers. Such is the problem of time."

SLACK, Walter H. *The Common Wealth Of The Mind.* NY Philosophical Lib 1967.

This "collection of reflections" dedicated to Robert G Ingersoll, touches on a variety of subjects—life, death, and much in between. The author is sympathetic to the humanistic values of religion, Gandhi's non-violence, mixed marriages, the Law of Change, our Balance of Power Society, civilizationalism, democracy, and Ethical Humanism, etc. The latter stresses: "Practice, Justice, Mercy, and Understanding."

SLAKEY, Thomas J. Aristotle On Sense Perception. *Phil Rev* 70,470-484 O 61.

Slakey analyzes Aristotle's attempt in *De Anima* to explain perception simply as an event in the sense organs. He investigates especially the claims that sense is a *mesotes*, or "mean", and that a person perceiving becomes "like" the things he perceives. The analysis also shows why Aristotle conceived of intellect as something nonbodily.

SLATTERY, Mary Francis. *Hazard, Form And Value.* Detroit 1971.

This book is written to establish a single point. In the author's language the point is that "affective hazard" is a necessary ingredient in all cases of aesthetic value. In a novel, for example, the fact that the story covers many different periods of time constitutes a hazard (sometimes the word 'risk' is substituted) toward the relating of the different parts of the story. In a painting, the complexity of its forms is a hazard to unity, and the greater the hazard the more pleased we are to see that the painting is unified.

- SLOTE, Michael A.** *Reason And Scepticism.* NY Humanities Pr 1970.
- SLOTE, Michael Anthony.** An Empirical Basis For Psychological Realism. *J Phil* 61,530-537 O 64.
- Psychological Egoism, commonly rejected as a thesis supportable only by fallacious *a priori* philosophical arguments, may well have an empirical basis. The thesis that no act is ever unselfish is entailed by a certain psychological hypothesis. If, as some behaviorists believe, all human motives derive genetically from "selfish" primary drives, like hunger and sex, and always remain functionally dependent upon them, so that we never continue to act from a seemingly unselfish motive unless such action usually yields primary drive rewards greater than any sacrificed in the performing of such action, then it follows logically that all our actions are fundamentally motivated by those selfish primary drives and we never do act unselfishly.
- SLOTE, Michael Anthony.** The Theory Of Important Criteria. *J Phil* 63,211-224 Ap 66.
- In this paper I argue for the implausibility of various attempts to explain certain philosophical and quasi-philosophical disputes over the application of so-called cluster terms via ambiguity or vagueness in those terms. I then put forward a Theory of Important Criteria, which seeks to explain the existence and persistence of such disputes in terms of one meaning, the ordinary meaning, of those cluster terms. One result of this theory is that the logic of cluster terms has, until now, been seriously misunderstood; and another is that value judgment is involved in an unexpected way in the making of what are usually thought to be statements of fact.
- SLUSHER, Howard S.** *Man, Sport And Existence: A Critical Analysis.* Philadelphia Lea & Febiger 1967.
- This book is an investigation of the activity of sport primarily from an existential position. Sartre, Buber, Heidegger, Kierkegaard, and Marcel are frequently quoted. Chapter headings are: Sport and Being, Sport and Purpose, Sport and Meaning, Sport and the Religious, Sport: Existence and Decision.
- SMALL, Kenneth.** Professor Goodman's Puzzle. *Phil Rev* 70,544-552 O 61.
- Small examines Goodman's "new riddle of induction." One way out of the puzzle about "grue" and "bleen" seems to rest on the distinction between purely qualitative predicates like blue and green, and positional predicates like grue which are not purely qualitative because they are explained by means of a temporal term. But Goodman argues that grue and bleen are interdefinable with blue and green, and so the two pairs of predicates stand or fall together as qualitative or positional predicates. Small shows that whatever symmetry has been established between the two pairs of predicates is merely formal and irrelevant to Goodman's case.

- SMART, J. J. C.** *Philosophy And Scientific Realism.* NY Humanities Press 1963.
- During the past few years, Smart has published a series of provocative articles in which he has argued for a "tough-minded" scientific materialism. In this book, which makes use of the articles and combines them with new material, he boldly defends the possibility of a synthetic philosophy which attempts to think clearly and comprehensively about the nature of the universe and the principles of conduct.

Starting with a critique of phenomenalism, he argues that the physicist's picture of the world is truer than that of the language of ordinary common sense. Continuing with a discussion of biology, secondary qualities, and consciousness, he stoutly maintains that man can be understood as a physical mechanism in a nonanthropocentric space-time world.

- SMART, J. J. C.** Incompatible Colors. *Phil Stud* 10,39-41 1959.
- The author goes into the question whether the proposition 'A surface cannot be two different colors (all over) at the same time' is analytic. The analyticity of this proposition might be objected to through means of an analogy with the statement 'all uncles are males'. We could imagine a convention according to which 'female uncle' meant aunt, but it seems to be a necessity rooted in the nature of things that a thing could not be red all over and green all over—thus a proposition of the latter kind is not analytic in the same way that the proposition about uncles is. The author argues that objections to the analyticity of the proposition concerning two different colors is primarily a matter of how much a person is prepared to build into the notion of a color-concept.
- SMART, J. J. C.** Is Time Travel Possible? *J Phil* 60,237-241 Ap 63.
- Hilary Putnam (*Journal of Philosophy*, Volume 59, 1962) has given an interesting defense of the conceptual possibility of time travel. Of course a lot depends on what is meant by 'time travel'. The purpose of this paper is to get clear as to senses in which time travel is and is not a conceptual possibility. There is an objection to calling Putnam's and certain related cases 'time travel,' since ordinarily by 'travel' we mean change of space with respect to time, but if this objection is waived, their conceptual possibility can be conceded. Nevertheless, there are cases of time travel, such as that in H G Wells's story, which are demonstrably absurd.
- SMART, J. J. C.** Materialism. *J Phil* 60,651-661 O 63.
- This is a defense of materialism conceived in such a way that, according to it, there are no irreducible laws or properties, say in biology or psychology. In particular, the doctrine of psychophysical dualism and any theory of emergent properties are held to be incompatible with materialism. But what about consciousness? Can we interpret the having of an after-image or a painful sensation as something material in the present sense? The paper argues for a materialist yet nonbehaviorist account of sensations which is at the same time consistent with our ordinary language of sensation reports.
- SMART, J. J. C.** Sensations And Brain Processes. *Phil Rev* 68,141-156 Ap 59.
- SMART, J. J. C.** The Methods Of Ethics And The Ethics Of Science. *J Phil* 62,344-348 Je 65.
- This paper discusses the methodology of ethics from the point of view of an act utilitarianism, though it is hoped that much of it will be relevant to the methodology of other systems of ethics. The question is whether general ethical principles should be tested by their particular consequences, or whether, rather, our particular moral feelings should be assessed in the light of general principles. Most writers on ethics suggest that the former is the case, but it is contended that this may rest on a false analogy with science. However the paper shows sympathy for both points of view, and it is suggested that no moral theory may be able to appeal to all sides of our nature. Criticisms of act utilitarianism by Landesman and McCloskey are discussed.

- SMART, Ninian.** *Philosophers And Religious Truth.* NY Collier Books 1969.
- SMART, Ninian.** *The Philosophy Of Religion.* Magnolia MA Smith 1971.
- The aim is to examine questions of meaning and truth in light of their "living, non-linguistic context," religions inside and outside the Judaeo-Christian tradition, and materials of sociology and psychology. Religion involves "numinous," mystical apprehension of the unseen and transcendent, approached through worship and contemplative techniques, expressed by mythic and doctrinal symbols, embodied in social institutions and ethical teachings. This work emphasizes freeing the understanding of religious meaning and truth from the conceptual errors of theology and constrictive science.

This paper discusses five educational tasks that cannot be performed adequately, or at all, without a knowledge of philosophy. The first of these tasks is instruction, which involves the ability to perform operations acquired largely from knowledge taken from logic, broadly conceived. The second task is that of giving direction to educational enterprise, which requires concern with the purposes and direction of the educational program. The third task is the development of the educational program. The fourth is the keeping of educational concepts as clear as possible. Finally, there is the task of examining and solving educational problems.

SMITH, Brian C. Maine's Concept Of Progress. *J Hist Ideas* 24,407-412 JI-S 63.

SMITH, Brian. *Memory*. NY Humanities Pr 1966.

This book falls in the field of philosophy rather than of psychology and makes no attempt to talk in terms of behaviourism or physiological explanations. It considers both what is going on in us when we are remembering and under what circumstances we may say we remember. The chief contributions to philosophy are the reduction of imaging to direct memory-awareness and the criticism of the notion of the specious present leading to the denial of any sharp distinction between memory of the past and perception of the present.

SMITH, Charles. *Sensism: The Philosophy Of The West*. NY Truth Seeker 1956.

SMITH, Christopher Upham Murray. *The Problem Of Life: An Essay In The Origins Of Biological Thought*. NY Wiley 1975.

This volume offers a survey of the manner in which scientists and philosophers have conceived life and living processes from the period of early Greek philosophy to the present. The first chapter deals with the function of imagination in the scientific enterprise. Chapters 2 and 3 sketch the general animism of ancient thought, and provide palaeontological excursions into the roots of some key words. The next three chapters deal with the pre-Socratics, and the seventh chapter with the *Timaeus*. Chapters 8 through 10 deal with Aristotle's biology, and the general attempt to extend the embryological paradigm to cover all modes of physical explanation. Four successive chapters are devoted to late Greek thought, mediaeval developments, alchemy, the Platonic revival, and the Aristotelianism of Harvey. Chapter 15 is devoted to Descartes and the mechanization of physiological processes. Two further chapters are devoted to the development of the Cartesian paradigms and the romantic reaction (chapter 18). The development of Darwin's natural selection (chapter 20) marks the final triumph of mechanism over teleology. Three further chapters sketch contemporary developments in the physics of mind.

SMITH, Colin. *Contemporary French Philosophy, A Study In Norms And Values*. NY Barnes & Noble 1964.

The book contains not only a reasoned account of the work of the better known French Existentialists, but covers such philosophers as Louis Lavelle, Ferdinand Alquié, André Lalande, Gaston Bachelard, Brice Parain, Vladimir Jankélévitch (and others) from the perspective of a study in 'norms and values'. Merleau-Ponty's work receives the most detailed treatment as providing a phenomenology of experience and consciousness, basic to that which unites all the philosophers considered in this book in their emphasis on creative thinking and acting.

SMITH, David Herbert (ed) and Johnson, James Turner (ed). *Love And Society: Essays In The Ethics Of Paul Ramsey*. Missoula MT Scholars Pr 1974.

The essays in this book respond to the work of theological ethicist Paul Ramsey under three headings: Foundations, War and Political Ethics, and Medical Ethics. Some of the essays are analytical and interpretive of Ramsey's thought, while others use it as a base for further moral investigation of issues touched on by Ramsey. Topics treated include good acts v. good rules, killing, just war theory, just distribution of medical care, the role of covenants in ethics, death and dying, and experimentation on minors.

SMITH, Harmon L. *Ethics And The New Medicine*. Nashville Abingdon Pr 1970.

SMITH, Huston. *Condemned To Meaning*. NY Harper & Row 1965.

Man is condemned to meaning because questions about the meaning of life are unavoidable. The author wishes to combine the methods of analytic philosophy with the interests of Continental philosophy in a new search for the meaning of life. His view is that, since human knowledge is constructive, perspectival and relative we cannot simply find life's meaning, but must to a great extent construct it. There are five categories of meaning in terms of which we render nature intelligible: trouble, hope, endeavor, trust and mystery. In the healthy spirit, all five operate in concert. In the unhealthy spirit is an imbalance.

SMITH, Huston. *Forgotten Truth: The Primordial Tradition*. NY Harper & Row 1976.

The author claims that all religions, primitive and sophisticated are fundamentally the same; that is, all recognize the existence of a reality more significant than objective reality and that God is immanent in all reality. Because of his misreading of science Western man is spiritually and intellectually dislocated in his awareness of these truths.

SMITH, Huston. *The Purposes Of Higher Education*. NY Harper 1955.

This book originated from discussions of a Washington University Committee, formed to define the aims of liberal education. Recognizing the participants' diversity in principles, the author derives, nevertheless, a common result: the end of education is found in the enlargement of human freedom, defined as "the spontaneous expression of an authentic self."

SMITH, Huston. Accents Of The World's Philosophies. *Phil East West* 7,7-20 Ap-JI 57.

SMITH, Huston. Do Drugs Have Religious Import? *J Phil* 61,517-529 O 64.

William James thought that the insights that occurred to him while his brain was chemically altered has "metaphysical significance." The present article reviews this claim in the light of empirical discoveries of the last decade relating to the newly synthesized consciousness changing substances: mescaline, psilocybin, and LSD. Focusing on the religious experiences these drugs occasion, the article denies that R C Zaehner's *Mysticism Sacred and Profane* has "fully refuted" their claims, and argues (a) phenomenologically that such experiences can be indistinguishable from religious experiences that occur naturally, and (b) philosophically that a case can be made for their religious validity.

The selection is intended as a cross-section of all major trends, though the analytic-linguistic receives less attention than many would have expected.

SMITH, James M and Mc Clendon Jr, James William. *Understanding Religious Convictions.* Notre Dame Notre Dame Univ Pr 1975.

This book is a written study of the structure and meaning of religious convictions. The authors using recent language theory, e.g., Austin, provide a useful discussion of a "speech act theory of religion." Making much of the idea of "convictional community," they opt for the development of theology as the "Science of convictions," a sub-discipline of "theoretics" as the "investigation of shared convictional communities," e.g., political or ideological. It contains extensive footnotes drawn from classical and recent literature in linguistic analysis and philosophy of religion.

SMITH, James M. Punishment: A Conceptual Map And A Normative Claim. *Ethics* 75,285-290 Jl 65.

Not all punishment involves the infliction of pain. Similarities between punishment and treatment for disease lead us to justify the former (as infliction of pain) as we do the latter. We must not substitute treatment for punishment, by unjustifiably equating all crime with mental disease. Much can be learned by studying the differences and interrelations between concepts of reparation, revenge, retaliation, forgiveness, and punishment.

SMITH, James Ward. *Theme For Reason.* Princeton NJ Princeton Univ Pr 1957.

The author accepts the now usual division of propositions into analytic, which need no observational confirmation, and synthetic empirical. But he holds there are also many "propositions" which are not held merely for emotional reasons, but are decisions, not confirmable by observation, yet held because they are reasonable. He instances political and moral judgments, and judgments concerning relevance, emphasis and importance, as containing such propositions. They are not arbitrary or subjective: they are based on observed fact, yet go beyond what such facts dictate. He associates his views with those of the English philosophers, J L Austin and R M Hare (also Mrs P R Foot). But he goes beyond them and recognizes a great problem of the adequacy of our currently popular categories, as regards describing what is meant by a reasonable view of the world.

SMITH, Jeffery and Venturi, Lionello. On Esthetic Intuition. *J Phil* 39,273-275 My 42.

SMITH, Joanmarie. An American Theory Of Community. *Living Light* 46-57 Wint 72.

Working out of the pragmatic categories of John Dewey a description of community is sketched. It is a proposed as a model peculiarly suited to our temperament. Community is depicted as an artistic event incorporating what Dewey identifies as the conditions of the aesthetic: conservation, tensions, cumulation, anticipation and fulfillment.

SMITH, Joanmarie and Durka, Gloria. *Modeling God: Religious Education For Tomorrow.* NY Paulist Pr 1976.

The nature of our interaction with reality is explored. The case is made that the fundamental category of existence is faith. Since we mediate reality through what we call models we cannot achieve justified true belief only justified belief. This epistemology is shown to be consonant with orthodoxy in its literal sense. A model of God is then worked out using Whitehead's process categories.

SMITH, Joanmarie and Durka, Gloria. Modeling. *Religious Education* 71,115-132 My-Je 76.

Through a very brief inquiry into the nature of knowledge we make a case for the position that there is no knowledge in the most accepted sense of the term and that our experience of reality is mediated by interpretive schemes which we call models. We claim however that there are criteria for evaluating the worth of competing models. We then sketch a model of reality including a doctrine of God which we think meets these criteria. Finally, we deduce a model of education which flows from the positions outlined. In this model education is, by definition, religious education.

SMITH, John E. *Religion And Empiricism.* Milwaukee Marquette Univ Pr 1967.

This Marquette University Aquinas Lecture for 1967 considers the appeal to experience in connection with the "question of God." Smith urges that the only philosophically viable form of this appeal is one which embodies the basic ideas of American pragmatism, and that in this form it yields a disclosure of the religious dimensions of experience. These dimensions present the problem of God, i.e., the questions of what is the ground of our being and the supreme object of our devotion. The lecture includes brief examinations of both traditional "Lockean" and contemporary "Wittgensteinian" empiricism.

SMITH, John E. *The Analogy Of Experience: An Approach To Understanding Religious Truth.* NY Harper & Row 1973.

The author tackles the problem of how the religious believer can substantiate his faith. He is aware of problems posed by the detractors of religion and the consequent religious attempts at the conceptualization of faith. He does not shy

away from a confrontation with the adversaries of religious faith, rather he attacks them head on. But his argument rests upon what he calls the "analogia experientiae"; it is only through an experiential medium that one can recover a sense of the human meaning expressed by Christian ideas: "The importance of experience in modern thought must be taken seriously because it furnishes us with a richer and more complex form of understanding than is possible on the basis of reflective reason alone. Experience does not exclude reason after the fashion of narrow and essentially nonempirical conceptions of experience; experience without interpretation is dumb. Experience transcends reason in concreteness and is therefore the matrix within which all understanding takes its rise."

SMITH, Raymond. *Whitehead's Concept Of Logic*. Westminster MD Newman Pr 1953.

This book is an evaluation of Whitehead's philosophy of logic, and in particular his criticism of Aristotelian logic. The main conclusion is Whitehead "misunderstood the scope and purpose of the traditional logic."

SMITH, Raymond. The Virtue Of Docility. *Thomist* 15,572–623 O 52.

SMITH, Steven A. *Satisfaction Of Interest And The Concept Of Morality*. Lewisburg PA Bucknell Univ Pr 1974.

The problem addressed is the definition of morality *simpliciter*, apart from normative considerations: What distinguishes a morality from non-moral action-guides? What is it to have a morality? Chapters 1, 2 and 3 lay down broad, provisional parameters for any satisfactory analysis. Chapters 4 and 5 examine the view that moralities are necessarily bodies of guidelines for allocation of advantages among competing parties. Chapter 4 demonstrates the plausibility of this view by showing how it accounts for a number of typical characteristics of moralities; Chapter 5 shows that, despite its plausibility, the view is false.

SMITH, T V. *The Ethics Of Compromise And The Art Of Containment*. Boston Starr King Pr 1956.

How men of conscience are to resist that "logic of presumption" which lures them to resolve the world's ambiguities *ex parte*, and thus to practice the "art of containment" which enables society to live in peace, is the theme of this book by the politically-experienced Professor T V Smith.

SMITH, Thomas Vernor. *Constructive Ethics, With Contemporary Readings*. NY 1948.

SMITH, Thomas Vernor. *Lincoln: Living Legend*. Chicago Univ Of Chicago Pr 1940.

This volume by T V Smith consists of three Lincoln memorial papers. The main line of presentation is a closely-reasoned analysis of what the author represents to be the guiding fundamental of Abraham Lincoln's career—"the federal principle of value." In Smith's analysis, this principle emerges not as a simple party precept, but rather as an organic constellation of moral, political, and metaphysical positions.

SMITH, Vincent Edward (ed). *Philosophy Of Biology*. NY St John's Univ Pr 1962.

This is a collection of four essays. L P Coonan writes on method in biology, a very quick sketch from pre-historic times to the present. In the second paper, Raymond J Nogar discusses the scientific and philosophical status of evolutionary thinking today. Daniel M Lilly in an eightpage essay writes on problems shared by biology and philosophy: definition of life, ontological status of cells, the explanation of the functioning of a living organism. The last essay, by Charles De Koninck asks whether life is a meaningful word. He argues that it is not profitable to try to explain higher forms of life in terms of lower ones.

SMITH, Vincent Edward. *St Thomas On The Object Of Geometry*. Milwaukee Marquette Univ Pr 1954.

SMITH, Vincent Edward. *The General Science Of Nature*. Milwaukee Bruce 1958.

"To set forth for the modern student the general science of nature as inspired by Aristotle's *Physics* is the aim of this book" (page vii). "The general science of nature" presented in this textbook treats the most general features of nature discussed by Aristotle and Thomas Aquinas, e.g., motion, hylomorphism, the four causes, levels of abstraction, etc. The author examines conceptions in contemporary science, mathematical physics, relativity theory, quantum mechanics, and contends that the studies of these particular modern sciences logically presume the Aristotelian general science of nature.

SMITH, Vincent E. Wisdom And Science. *Proc Cath Phil Ass* 30,3–15 1956.

SMITH, Vincent. *Science And Philosophy*. Milwaukee Bruce 1965.

Smith has attempted to bridge the gap between philosophy and science and has admirably proposed arguments for communication between these two disciplines. He feels he can ask questions like "What is Science?" "What is the meaning of a scientific fact?" or "What is the significance of a scientific theory?" without denying either the existence of the fact or the validity of the theory. To establish his thesis he calls upon the great scientists themselves as well as the philosophers of science. This volume is welcome as an historical view of the philosophy of science from Plato to the twentieth century. Smith discusses the pragmatic view, the idealistic, the linguistic philosophers, the existential view, the Communist view and finally the various realisms. He himself holds that the general science of nature is distinct from metaphysics and that metaphysics and philosophy are not totally identified. Such identification is at the root of many difficulties between science and philosophy. There is no bibliography except in the footnotes.

SMOKLER, Howard. Consistency And Rationality: A Comment. *J Phil* 62,77–79 F 65.

Formal systems have been constructed which have as one objective the definition of the rationality of a set of beliefs. Schick argues that only Kyburg specifies necessary and sufficient conditions for rationality. Only Kyburg's system insures that for any two beliefs B_1 and B_2 , in the situation that the evidence supports B_1 , more than it does B_2 , it is never the case that B_2 is rationally believed while B_1 is not. But Schick is incorrect in this assertion since Kyburg is not able to specify criteria for his initial beliefs; beliefs from which other beliefs follow in accordance with the rules of his system. Therefore the problem posed by Schick still remains for Kyburg's system as it does for all other systems of the logic of belief so far constructed.

SMOKLER, Howard. Goodman's Paradox And The Problem Of Rules Of Acceptance. *Amer Phil Quart* 3,71–76 Ja 66.

The employment of predicates like "grue" and "bleen" in inductive inferences leads to embarrassing consequences. The most severe of these is that the ordinary rules of inductive inference allow us to infer contradictory or contrary assertions. This consequence can be avoided if rules of inductive inference are not treated as rules of acceptance. This course of action is plausible on other grounds as well, but the existence of such predicates must be considered an argument in its favor. The existence of such a paradox challenges traditional assumptions about inductive logic. These assumptions must be modified in the light of considerations suggested by the character of these predicates. Several such modifications are examined and criticized, and some suggestions are made for changes of the rules.

SMOKLER, Howard. Informational Content: A Problem Of Definition. *J Phil* 63,201–211 Ap 66.

The idea of the semantic information of a statement is of great importance in theories of confirmation and explanation. Definitions, both of the qualitative notion, informational content, and of the quantitative one, amount of information, have been offered. The present paper introduces a set of conditions of adequacy for the qualitative notion, and a definition of informational content which satisfies these criteria is introduced. It has the following advantage over the traditional ones introduced by Popper, and by Carnap and Bar-Hillel: (1) account is taken of the fact

that the informational content of a statement is a function not only of the logical structure of the language, but also of the meaning—rules of the language and the set of beliefs of the person who receives the information, (2) account is taken of the fact that the informational content of statements as usually defined includes irrelevant elements.

SMULLYAN, Arthur. The Method Of Consequences. *Phil Rev* 72,48–56 Ja 63.

The method of consequences is the procedure of provisionally accepting an hypothesis on the basis of rigorous tests, applied not only to it but to as many genuine alternatives as we are able to formulate. Smullyan argues that we are justified in employing the method of consequences provided that our standard of rigor is sufficiently severe and there is a finite probability, however small, that an hypothesis developed in scientific research is true.

SNELLGROVE, David. *Buddhist Himalaya: Travels And Studies In Quest Of The Origins And Nature Of Tibetan Religion*. NY Philosophical Lib 1957.

The author illustrates the origins and nature of Tibetan Buddhism with the material gathered from his travels and studies in the Himalayan region. Included in this analysis of Buddhism from the Tibetan point of view are the various cultural and archeological traces found in Nepal, Kulu, Spiti, and other Himalayan valleys. A section on Tantric Buddhism is also presented, including the tantric uses of philosophical concepts.

SNOOK, I A (ed). *Concepts Of Indoctrination: Philosophical Essays*. Boston Routledge 1972.

"The papers," says the editor, "are primarily concerned with the meaning of the term 'indoctrination'." And a wide spectrum of analyses of this term are represented. There is considerable attention given to the question "Can only 'doctrines' be indoctrinated?", as to the underlying question "What makes a set of beliefs into a doctrine?" Some articles deal with special areas of education. One of Flew's contributions focuses on religious education, and Atkinson's article primarily on moral education.

SNOOK, I A. *Indoctrination And Education*. Boston Routledge 1972.

In the first part of the book the author considers and rejects three popular accounts of the concept of indoctrination: those respectively in terms of the 'methods' employed by teachers, the 'content' of what is taught, the 'characteristics' of the person who has been indoctrinated. He then presents his own analysis in terms of the intentions with which teaching is carried on. The author compares and contrasts the concept of indoctrination with such related concepts as those of teaching, conditioning and brain–washing.

SOLL, Ivan. *An Introduction To Hegel's Metaphysics.* Chicago Univ Of Chicago Pr 1969.

I Soll has produced a concise exposition of some of the central themes of Hegel's philosophy. The major topics expounded are the section of the *Phenomenology of Mind* entitled "Self-Consciousness"; Hegel's treatment of the Kantian thing-in-itself; his analysis of subjectivity and objectivity, involving his theory of language; and his use of the concept of infinity, which is shown to be Hegel's tie to the pre-Kantian metaphysical tradition. Supporting observations and suggestions are gleaned from some previous scholars, principally Walter Kaufmann and Josiah Royce.

I argue for the continuity of Continental philosophy from Kant and Hegel through Sartre, and I provide detailed analyses of some of the main figures of this continuum, namely Kant, Hegel, Kierkegaard, Nietzsche, Husserl, Heidegger and Sartre.

SOLOMON, Robert C. *The Passions.* Garden City NY Anchor Pr 1976.

I argue that emotions have been systematically misunderstood, usually by virtue of the fact that they are viewed as physiological disturbances or psychological interruptions. I argue that emotions are our own self-chosen phenomenological structurings of reality as we experience it, and that emotions can only be understood in terms of a purposive, conceptually sophisticated model. I include arguments against traditional theories of emotion, and I provide brief analyses of fifty different emotions in order to apply the theory.

SOLTIS, Jonas F. *Seeing, Knowing And Believing: A Study Of The Language Of Visual Perception.* Reading MA Addison-Wesley 1966.

This book is a systematic ordinary language analysis of terms used in talk about visual perception such as "seeing," "recognizing," "noticing," "identifying," "mistaking," "illusion" etc. The point of the work is to clarify the language of visual perception, especially regarding our assumptions about how knowing and believing are related to seeing. The views of G Ryle, N Hanson, and H H Price are critically examined, and lead the author to develop a set of distinctions describing possible successes and failures in seeing.

SOMERVILLE, John (ed) and Parsons, Howard L (ed). *Dialogues On The Philosophy Of Marxism.* Westport CT Greenwood Pr 1974.

This work is composed of papers written for the symposia of the Society for the Philosophical Study of Dialectical Materialism, beginning in 1962. The contributors come from the U. S. A., the U. S. S. R., Poland, Yugoslavia, and Belgium. Their contributions are organized under the following topics: philosophic foundations of

Marxism; Marxism and theory of logic; Marxism and the philosophy of science; Marxism and humanism; Marxism's image of man; Marxism and ethical theory; Marxism and alienation; Sartre and Marxism; and dialogue and history.

SOMERVILLE, John. *Soviet Philosophy; A Study Of Theory And Practice.* NY Philosophical Lib 1946.

The great competency of Professor Somerville has enabled him to cover an unusually large number of topics in relatively few pages, because he goes right to the heart of one issue after another, pointing out the essential in the midst of the almost insane distortions this subject of Soviet philosophy has received from the professional enemies of the U S S R. The tactics of the author's presentation are excellent,—part I deals with the social outlook and part II with the world view, i.e., technical philosophy (ontology) is left for last and is thus made much more intelligible.

SOMERVILLE, John. World Authority: Realities And Illusions. *Ethics* 76,33-46 O 65.

This essay tries to answer the question of what will make possible the development of the United Nations into a viable world authority, meaning one with the power of physical enforcement of decisions and able to exercise punitive and preventive measures. Most importantly, it must have force at its disposal. If a third world war is to be prevented, ideological equality must characterize the dealings of nations with one another in the United Nations. Communism must not be defined as a criminal conspiracy. Greater general understanding of the principles of the United Nations must be promoted.

SOMJEE, Abdulkarim Husseinbhoj. *The Political Theory Of John Dewey.* NY 1968.

SOMMERS, Fred. A Program For Coherence. *Phil Rev* 73,522-527 O 64.

The following are some points made in reply to criticism of the author's "Types and Ontology": (1) If P is a property, define the category of P (Cp) as the set of individuals that can significantly be said to have P. (2) If any individual belongs both to Cp and Cq, then either Cp includes Cq or Cq includes Cp or Cp=Cq. (3) An ontology is coherent only if it satisfies (2) for all individuals. Suppose that spirits cannot be characterized as colored or colorless, i.e., they are not in C-colored. Assume also that chairs are not in C-sad. Then neither category includes the other. Yet persons are in both. To avoid incoherence we must deny that persons are individuals. Coherent alternatives to Cartesianism put chairs in C-sad (panpsychism) or spirits in C-colored. The thesis supports Russell's general idea that any coherent ontology is formally isomorphic to linguistic type structure.

SOMMERS, Frederic. The Passing Of Privileged Uniqueness. *J Phil* 49,392-396 My 52.

SOMMERS, Fred. Meaning Relations And The Analytic. *J Phil* 60,524-533 Ag 63.

In his critique of the analytic-synthetic distinction Quine distinguishes two classes of analytic statements: (A1) those that are logically true and (A2) those that lean on extralogical meaning relations. In this paper the same critique that Quine applies against A2 statements is used against A1 statements. By showing that both suffer the same fate at Quine's hands, it is shown that Quine's vital contrast is not a contrast at all and that his criticism goes further than he wants it to go. The paper concludes that the "flight from intension" can become a flight away from the grounds presupposed for any application of logical and linguistic rules.

SOMMERS, Fred. Types And Ontology. *Phil Rev* 72,327-363 Jl 63.

Sommers discusses the problem of types for natural language, using four concepts of type. He treats Black's general criticism of a formal theory of types for natural language, and the relation of types to ambiguity. He ends by stating and proving the type-structural principle, discussing its ontological meaning and application.

SONDEL, Bess. *The Humanity Of Words; A Primer Of Semantics.* Cleveland World 1958.

In this primer designed for the general reader, semantics is considered as "the study of techniques by which to accomplish purposes through the use of words." In addition to furthering theoretical understanding, the book has the practical aim of helping people to communicate more effectively. The author insists that language must be examined and understood in relation to human behavior, rather than in isolation. Much of the volume is devoted to analyses of the work of Ogden and Richards, Korzybski, and Morris. Partly relying on those writers, the author develops

her Field Theory of Communication, which has some similarities to personality field theory in psychology.

SONNEMANN, Ulrich. *Existence And Therapy: An Introduction To Phenomenological Psychology And Existential Analysis.* NY Grune & Stratton 1954.

SONTAG, Frederick. *Divine Perfection: Possible Ideas Of God.* NY Harper 1962. Part One of this book is an historical exposition of seven theories of divine perfection (Plato and Aristotle, Plotinus and the pseudo-Dionysius, Augustine and Anselm, Aquinas and Ockham, Eckhart and Cusa, Spinoza and Leibniz, and Kant and Hegel). Part Two is a constructive analysis of the inter-relations of a dozen concepts used by theologians and philosophers in their thought about God and, consequently, about man. The author provides materials which he hopes will make it possible to begin philosophy not with an epistemology but with an explicit ontology. He holds that our disagreements over the details of theology and metaphysics are consequences of our often un-recognized differences about the nature of God.

SONTAG, Frederick. Heidegger And The Problem Of Metaphysics. *Phil Phenomenol Res* 24,410-416 Mr 64.

The author sympathetically treats Heidegger's view of metaphysics, as a basic reflection upon some previous thought structure, which is not overt, but revealed to the mind in metaphysical writing. There is no one metaphysical structure, as there is no single way of speaking. One can reorganize the past by either giving a new analysis of it in order to better understand it, or by drawing back from it in order to extract from it a new direction for thought. (the latter is illustrated through Heidegger's treatment of Kant.) Finally, metaphysical endeavors are linked with human finitude and transcendence.

SOROKIN, Pitirim A. *Altruistic Love: A Study Of American "Good Neighbors" And Christian Saints.* Boston Beacon Pr 1950.

"From the tragic experience of the last few decades we have begun to learn that without a minimum of love no social harmony, no peace of mind, no freedom, and no happiness are possible," says the author. This volume represents a calculated effort to explore the nature of altruistic love. Selective studies of American "good neighbors," in part one, and of Christian-Catholic saints, in part two of the book, provide material for the answers to such questions as, what are the typical characteristics of altruistic persons? what are their types? their sex and age groups? their health and duration of life? A concluding section sums up good-neighborliness and saintliness and the meaning of altruistic love.

SOROKIN, Pitirim A. *Social And Cultural Dynamics: A Study Of Change In Major Systems Of Art, Truth, Ethics, Law And Social Relationships.* Boston Ext Horizons Books 1957.

SOROKIN, Pitirim A. *Social Philosophies Of An Age Of Crisis.* Boston Beacon Pr 1950. The book examines some of the modern social philosophies. In a chapter titled "Aesthetic Interpretations of History" the author examines the theories of W M F Petrie, Paul Ligeti, Waldemar Deonna, Frank Chambers, Charles Lalo and others. The social philosophies, in outline, of Danilevsky, Spengler, Toynbee, Schubart, Berdyayev, Northrop, Kroeber and Schweitzer are then presented. Part two of the book is given to a critical analysis of these philosophies and a final portion of the book points out areas of agreement among modern social philosophies and affirms the importance of social philosophy in our age.

SOROKIN, Pitirim A. *Sociocultural Causality, Space, Time: A Study Of Referential Principles Of Sociology And Social Science.* Durham NC Duke Univ Pr 1943.

Sorokin presents in this volume the methodology of his analysis of sociocultural phenomena which is expressed in his challenging and challenged *Dynamics*. It is a discourse on method in which he declares the limitations and inadequacies of the methods and principles of the natural sciences when applied to the social sciences.

SPARSHOTT, F E. *An Enquiry Into Goodness And Related Concepts: With Some Remarks On The Nature And Scope Of Such Enquiries.* Chicago Univ Of Chicago Pr 1958.

From the apparently simple formula "To say that x is good is to say that it is such as to satisfy the wants of the person concerned," Sparshott develops a subtle and self-critical analysis of evaluative language, incorporating much of classical and very recent ethical theory.

SPARSHOTT, F E. Socrates And Thrasymachus. *Monist* 50,421-459 Jl 66.

Many of the oddities of the debate between Socrates and Thrasymachus in Plato's *Republic* I are explicable only in the light of themes developed in the later books and in such earlier dialogues as the *Gorgias*. In particular, some of Socrates' weakest attempts at refutation become intelligible on the following hypothesis: Socrates believes that the ultimate motivation for "just" behavior is identical with the intellectual's love of truth; but, since Thrasymachus has no conception of any such motivation, his arguments have to be couched in terms compatible with Thrasymachus' assumption that all interpersonal relations are explicable in terms of competing interests. Since Book I is thus incomprehensible without reference to the later books, it cannot have been planned as a separate dialogue independent of them.

- SPECTOR, Marshall.** *Methodological Foundations Of Relativistic Mechanics.* Notre Dame Univ Notre Dame Pr 1972.
This book attempts to bridge the gap between the popularization and the physics text or treatise. It provides a clear account of the methodological foundations of both classical mechanics and relativity theory. Analyses and clarifications of certain fundamental concepts, principles, and procedures in classical and relativistic theory are presented in detail. Close attention is paid to philosophic issues rather than merely developing theorem after theorem. This book, then, is an attempt at fundamental philosophic clarification embedded in the format of an introductory work.

- SPIEGELBERG, Herbert.** "The Relevance Of Phenomenological Philosophy For Psychology" in *Phenomenology And Existentialism*, Maurice Mandelbaum (ed). Baltimore Johns Hopkins Pr 1967.
After some illustrations of the actual significance of Husserl's phenomenology for empirical psychology the potential relevance of a phenomenology of intentional consciousness, of the essential structures of types of psychic phenomena and of their genetic constitution in consciousness is outlined. A chance for cooperation between psychological field theories and the phenomenology of the life world could show their mutual relevance.
- SPIEGELBERG, Herbert.** A Defense Of Human Equality. *Phil Rev* 53,101–124 Mr 44.
This article is an answer to the fascist–nazi challenge, supported by Nietzsche, of the "lie" of human equality trying to clarify first the meaning of the equality thesis by distinguishing between equality in fact, equality in value and equality in rights, of which the first two are problematic. The major ground for equality in rights is found in the moral requirement to equalize the inequalities based merely on the "accident of birth."
- SPIEGELBERG, Herbert.** A Phenomenological Approach To The Ego. *Monist* 49,1–17 Ja 65.
This phenomenological approach to the ego is to show some of its ontic and phenomenal findings. Ontically, the ego turns out to be a being of varying volume, usually including the experienced body, often expanding beyond it, and sometimes withdrawing from parts or all of it. But this being has also a depth dimension, reaching down to the most personal level of the I–myself. Phenomenally, this ego, with its different levels, appears through different temporal and social perspectives, and these are given more or less adequately depending on the degrees of intuitiveness, clarity and distinctness with which they are presented.
- SPIEGELBERG, Herbert.** Accident Of Birth: A Non–Utilitarian Motif In J S Mill's Philosophy. *J Hist Ideas* 22,475–492 O–D 61.
The phrase "accident of birth" commonly used without much thought occurs especially often in the context of J S Mill's ideas about social justice. It means neither accident as opposed to essence, nor the absence of a cause, but a moral situation where there is no moral justification for native and similar inequalities. No attempt to reduce it to utilitarian grounds is undertaken by Mill.
- SPIEGELBERG, Herbert.** Concerning "The Phenomenological Tendency". *J Phil* 60,584–588 S 63.
This article is a reply to Marvin Farber's "The Phenomenological Tendency" in the *Journal of Philosophy*, Volume 59 (1962), pages 429–439 reviewing my *The*

Phenomenological Movement, answering his charges of being antiscientific, being attached to Scheler, not knowing Husserl (by supplying specific evidence on his depressive phases) and requesting evidence on Whitehead's supposed suspicion of phenomenology as a subjectivistic device.

- SPIEGELBERG, Herbert.** Critical Phenomenological Realism. *Phil Phenomenol Res* 1,154–176 D 40.

In this article the second half of the essay "The 'Reality–Phenomenon' and Reality," after a summary of the first half, states the case for a critical modification of phenomenological realism, which takes account of the scientific evidence behind various forms of Critical Realism.

- SPIEGELBERG, Herbert.** Husserl's And Peirce's Phenomenologies: Coincidence Or Interaction. *Phil Phenomenol Res* 17,164–185 D 56.

The fact that Charles S Peirce adopted temporarily the term "phenomenology" in 1902 for his doctrine of categories almost simultaneously with Edmund Husserl, who introduced it in 1901 in the title of the second volume of his *Logical Investigations*, invites a more detailed comparison. Remarkable parallels emerge but important differences remain. In any case, there is no indication for interaction between their phenomenologies at the time, but merely of coincidences based on the nature of the phenomena.

- SPIEGELBERG, Herbert.** Husserl's Phenomenology And Existentialism. *J Phil* 57,62–74 Ja 60.

After a streamlined confrontation of Husserl's phenomenology and Sartre's existentialism, this paper affirms their compatibility, denies their necessary connection, pleads for their cooperation and criticizes Sartre's rejection of Husserl's phenomenology of the pure ego.

- SPIEGELBERG, Herbert.** Indubitables In Ethics: A Cartesian Meditation. *Ethics* 58,35–50 O 47.

Strangely the Cartesian method of universal doubt and its phenomenological successors have not yet been applied properly to ethics. Doing so could yield as an ethical minimum such indubitable insights as (1) there are ethical beliefs *qua* beliefs (2) there is at least some ethical right to doubt either the legitimacy of our ethical beliefs or of our right to doubt them, (3) ethical doubt is either licit or illicit, and (4) some uncertainty as expressed in doubt is preferable to some types of belief.

- SPIEGELBERG, Herbert.** Phenomenology Of Direct Evidence. *Phil Phenomenol Res* 2,427–456 Je 42.

In an attempt to overcome major objections to self–evidence as a valid criterion of knowledge, this paper tries to develop Husserl's conceptions of self–evidence, and to point out phenomenologically describable differences between genuine and pseudo–self–evidence, such as speciousness and semblance, and to analyze crucial examples in this light.

- SPIEGELBERG, Herbert.** Rejoinder To Vere Chappell And Roderick Chisholm. *Monist* 49,38–43 Ja 65.

Spiegelberg again takes up Chappell's view that no real methodological differences exist between phenomenology and analysis, the only differences springing from misdescription or poor application. After addressing (1) Chappell and Chisholm on the questions of (a) ego and body, (b) person, body and physical objects, (c) ego and object perspectives and (2) Chappell on methodology, Spiegelberg concludes that while phenomenology and analysis are converging, the approaches are not identical but complementary.

- SPIEGELBERG, Herbert.** Supernaturalism Or Naturalism: A Study In Meaning And Verifiability. *Phil Sci* 18,339–368 O 51.

This article is a critique of the disjunction between supernaturalism and naturalism in the light of criteria of meaningfulness and verifiability. While supernatural terms are not rejected as void of pointer meanings and linguistic meanings, the essentially negative character of qualitative supernatural meanings leaves them without the presentational, or at least diagnostic meanings, that would make verification possible. Naturalism suffers chiefly from the vagueness and potential all–inclusiveness of the term 'natural'.

- SPIEGELBERG, Herbert.** Toward A Phenomenology Of Experience. *Amer Phil Quart* 1,325–332 O 64.

This analysis of experience in the light of phenomenology brings together some findings about the essential structure of experiencing, stressing its intentional directedness toward the experienced, its synthesis of acts, its transcending itself, its temporal structure, its concern with individual objects, its prepredicative nature, its constitutive function, and its combination of receptivity and spontaneity. What is found based on search, rather than what is given, is central to such experience. The limited metaphysical significance of such an analysis is pointed out.

- SPIEGELBERG, Herbert.** What Makes Good Things Good: An Inquiry Into The Grounds For Value. *Phil Phenomenol Res* 7,578–611 Je 47.

This search for a common good–making characteristic for all good things in analogy to a right–making characteristic that makes right actions right yields the hypothesis that the ground of goodness for (1) things extrinsically good is their producing of or being produced by other things good; and (2) things intrinsically good either (a) harmony among pronounced individualities, (b) promotion of ultimate harmony by things immediately disharmonious or (c) purity of essence in non–complex entities.

- SPITZ, David.** *Essays In The Liberal Idea Of Freedom*. Tucson Univ Of Arizona Pr 1964.
This book contains sixteen essays dealing with the merits and problems of the idea of liberalism. The so-called "crisis of liberalism," the author claims, is a "crisis of man." The essays are grouped around three topics: the nature of freedom and power; specific issues bearing on the vindication of the liberal idea (civil disobedience, segregation, free speech and inquiry, unionism, and the nature and limits of freedom); and, the contemporary revival of conservatism and its attack on liberalism. In an Afterword, the author argues that Communism is nothing less than the negation of liberalism.
- SPITZ, David.** *Patterns Of Anti-Democratic Thought*. NY Macmillan 1949.
The author presents, discusses and refutes typical anti-democratic thought ranging from that of one-time Marxist James Burnham and his "economic-political ruling class" to George Santayana and his "ruling, natural aristocracy."

This book is an attempt to analyze the nature of conscious beliefs. The ontological and semiotic substructure are essential preliminaries to the main section on "Imaging and Believing." Among the preliminary topics discussed are the nature of sense data, universals and facts, together with an analysis of pragmatic and semantic meaning and types of reference.

- SRZEDNICKI, Jan T J.** Remarks Concerning The Interpretation Of The Philosophy Of Franz Brentano. *Phil Phenomenol Res* 22,308-316 Mr 62.
Most editions of Brentano's works and his commentators have a tendency to attempt to arrest his thought at a given moment and then try to work out, in a systematic way, his views concerning most problems. The author thinks this approach is wrong. For Brentano, particular insights are more important than the general hypothesis. He never thought of himself in possession of the final and complete theoretical view. It is shown that a more detailed painstaking approach is better; the nature of philosophical problems makes system building inappropriate.

- STAAL, Frits.** *Exploring Mysticism: A Methodological Essay*. Berkeley Univ Of Calif Pr 1975.
Professor Frits Staal's illustrated book *Exploring Mysticism* is primarily a polemical defense of the position that there is an inherent rational character to the mystical experience. He takes vigorous issue with those Christian and non-Christian interpreters of mysticism who characterize the mystic's experience as totally subjective and mysterious, which makes the experience unintelligible to the ordinary rational mind. Staal argues that the usual methods used to analyze the mystic's experience are not at all congruent with the unique character of the experience. Professor Staal's volume provides a good introduction to the mystical phase and motifs found in the major religions of the East and West.

- STABLER, Edward Russell.** *An Introduction To Mathematical Thought*. Cambridge MA Addison-Wesley Pr 1953.
- STACE, W T.** *Mysticism And Philosophy*. Philadelphia Lippincott 1960.
This book is a sensitive and intelligent inquiry into the nature of mysticism, with special emphasis upon the question as to whether mystical experience is subjective only, or can reasonably be said to refer to an objective reality. There are also careful and valuable discussions of the relation of mysticism to religion and ethics, and of its implications for logic, language, and a theory of immortality.
- STACE, W T.** *The Destiny Of Western Man*. NY Reynal & Hitchcock 1942.
This work is designed to show that humanistic philosophy supplies rational principles by which it can be proved that the democratic ethos is true and the totalitarian ethos false. This book well illustrates the value of an extensive technical background, and proves that a philosophical discussion of great significance and trenchancy can be put in lucid, non-technical terms.
- STACE, W T.** *The Nature Of The World: An Essay In Phenomenalist Metaphysics*. Princeton NJ Princeton Univ Pr 1940.
"God is a cell, or a super-cell" is the conclusion at which Professor Stace arrives at the close of his discussion of *The Nature of the World*. He attempts to give a modern version of the Leibnizian concept by applying the term "cell" to the unit of reality in such a way as, he hopes, may avoid most of the discrepancies or objections to the original doctrines of monadism.

STACE, Walter Terence. *Time And Eternity; An Essay In The Philosophy Of Religion.* Princeton NJ Princeton Univ Pr 1952.

This is an essay treating of the modern conflict between philosophy and naturalism. The author's solution of this seeming conflict "comes through his establishment of two radically different orders—the temporal or natural order and the eternal or divine order—each of which is 'wholly other' to the other, but which may be spoken of metaphorically as "intersecting" in the experience of the saint, and, in lesser degree, in that of all men and indeed of all existing things.... Central to the argument is the belief that theological doctrines in any religion are symbolic, not literal."

STACE, George J. *Kierkegaard's Existential Ethics.* University Univ Of Alabama Pr 1977.

Kierkegaard's philosophy envisions man progressing toward a higher life through three stages (or 'spheres') of existence, i.e., the aesthetic, the ethical, and the religious. He argues that Kierkegaard's ethic is not as much influenced by Kant as many have supposed. Further, he shows that much of what Kierkegaard had to say about the moral choice can be traced back to Aristotle, and this influence is not often recognized. Then Stace shows how the ethical thought of Kierkegaard formed much of the basis for the phenomenology of Heidegger. Attention is also given to the similarities—and dis-similarities—of Kierkegaard's thought to that of Hegel and Nietzsche and F H Bradley.

STAHL, Gary. An Inductive Model For Criticism. *Monist* 50,237–249 Ap 66.

The contention is that critics can give inductive reasons in support of their evaluative judgments of art, even though making such judgments is neither the only nor major function of a critic, even though not all evaluations which are made are such that they can be supported inductively, and even though those judgments which can be supported inductively can be understood as such from a philosophic perspective often rejected by the very critics who make the judgments. This rejection of inductive reasoning in criticism—and the subsequent search for new "logics" of imperatives, performatives, and attitudes, is due primarily to a failure to examine the metaphysical presuppositions of judgment; more specifically, it can be shown that from metaphysical presuppositions implicit in most contemporary Anglo-American philosophy, it is possible to deduce a model which displays the grounds for an inductive interpretation of critical reasoning.

STALNAKER, Robert C and Thomason, Richmond H. A Semantic Theory Of Adverbs. *Linguistic Inquiry* 4,195–200 1973.

We semantically represent an adverb such as 'slowly' in 'John walks slowly' as a function taking propositional functions into propositional functions, where a propositional function (the semantic representation of a predicate) is a function taking possible worlds into sets of individuals. We give a model theoretic interpretation along these lines of an extension of first order logic including such adverbs, as well as an abstraction operator for forming complex predicates, and discuss how this logic can be used in formalizing English so as to account for valid inference patterns that involve adverbs. Also, we formulate criteria for distinguishing sentence and predicate adverbs in English.

STAM, James H. *Inquiries Into The Origin Of Language: The Fate Of A Question.* NY Harper & Row 1976.

This book examines theories of the origin of language with emphasis on the way in which the question was raised, resolved, asked again, and eventually discarded. It treats 18th and 19th-century theories together with their background in ancient and early modern philosophy. Part One explores theories of Vico, mechanists, empiricists, primitivists, progress theorists, Rousseau, and others. Part Two concentrates on Herder and Hamann and other German thinkers. Part Three concerns the various revivals of the question during the nineteenth century, its role in early linguistic science, and its eventual fall into disrepute.

STAM, James H. Past Linguistics And Chomsky's Future. *J Psycholinguistic Research* 1,195–201 1971.

This review article concerning Noam Chomsky's *Language and Mind* argues that the lump-term "Cartesian linguistics," despite disclaimers, is seriously misleading and that Chomsky's treatment of past philosophy is distorted by his neglect of Kant. It argues that his analysis of deep structure is suggestive of a doctrine of categories, but that details and implications of such a theory are left undeveloped. It suggests that Chomsky should work on apparent parallels between his linguistic and political views and outlines some directions this might take.

STAMBAUGH, Joan. *Nietzsche's Thought Of Eternal Return.* Baltimore Johns Hopkins Pr 1972.

In this book the author examines the least understood and most widely ignored, but as far as Nietzsche was concerned the most important concept in his philosophy, that is, the concept of eternal recurrence. The analysis is conducted largely by examining the components of the concept, e.g., eternity, recurrence and the same. In the course of the analysis, made difficult by the fact that Nietzsche's statements on eternal recurrence are contradictory, the author relates eternal recurrence to the will to power, the striving for increase, and she demonstrates that these two concepts are inseparable. When eternal recurrence or return is construed as thought the concept is to be interpreted as the relation of the self to time. Here also we find Nietzsche rejecting traditional philosophic conceptions for an interpretation of the self which sees it and the will to power as art, the highest form of human activity.

STAMBAUGH, Joan. Music As A Temporal Form. *J Phil* 61,265–279 Ap 64.

The temporal aspect of music differentiates it from the visual arts, but it is also the case that musical time differs from the time required for the realization of other temporal arts. How this is so and in what way music is a temporal art in an eminent sense form the subject of this essay. It is argued that musical time transcends the dichotomy of a thing manifesting itself temporarily in something else and absorbs this dichotomy into an evolving, structuralizing tensivity of aesthetic temporality.

STANAGE, Sherman Miller (ed). *Reason And Violence: Philosophical Investigations.* Totowa NJ 1974.

Four of the book's essays are concerned with the larger questions of violence, technology, and culture, and the others with violence and persons, the language of violence and the violence of language. All of the essays are concerned with the nature, causes, victims, and agents of violence. Technological, economic, business, political, radical, police, sexist, racial, and ethnic violence are discussed. Personal, economic, and psychogenic violence; assassination, terrorism, and political murder are examined. The essays analyze violence perpetrated or accepted in the name of equality, justice, and law; and they explore questions of religious violence and violence in the name of order and morality.

- STANLIS, Peter J (ed).** *The Relevance Of Edmund Burke*. NY Kenedy 1964.
- STANLIS, Peter J.** *Edmund Burke And The Natural Law*. Ann Arbor 1958.
- Burke appears as the "Christian Statesman" demonstrating the validity in theory and practice of the classical and scholastic concept of Natural Law. Burke rejects "the entire revolutionary tradition of natural rights," attributed here to Hobbes, Locke, Rousseau's "intuitive" sentimentalism and the English "calculating utilitarianism." He opposed the consequent doctrinaire philosophy of the French Revolution from the standpoint of "natural law" as a general moral principle concretely realised through "historical experience" in the legal and political institutions of the State. The varying particularly of each nation's life and circumstances is duly allowed for in this concept. The particular function of the statesman is to exercise a "prudence" in "the spirit of the natural law," applying intelligence conjoined with a rich appreciation of the values involved for all concerned. The author interprets Burke's speeches, correspondence and political activities. He explains his policy with respect to affairs in Ireland, America, and India as well as in home politics.
- STANLIS, Peter J.** Burke And The Sensibility Of Rousseau. *Thought* 36,246-276 Je 61.

- STAPLETON, Laurence.** *Justice And World Society*. Chapel Hill Univ Of N Car Pr 1944.
- The author's position is an idealism which she traces in the history of social thought and with which she credits the founders of this Republic. The idea of justice floats, as it were, with eternal lustre as a constant, if not an absolute principle, in the realm of human values to grow as a workable guide in a world society which is in the process of fashioning. The *sine qua non* of the realization of justice as a practical virtue is sought in democracy, which is "inherently expansive."
- STAPLETON, Laurence.** *The Design Of Democracy*. NY Oxford Univ Pr 1949.
- The author attempts a philosophical restatement of the principles and context of democracy. Equality, freedom and self-government are viewed as the three chief political ideas of democracy.
- STAPLETON, Laurence.** Halifax And Raleigh. *J Hist Ideas* 2,211-224 Ap 41.

- STARR, David Edward.** *Entity And Existence: An Ontological Investigation Of Aristotle And Heidegger*. NY Franklin 1976.
- This book undertakes to assess the claims to ontological ultimacy of Aristotelian "substance"—*ὐσία*—and "existence" as considered in the early and middle works of Heidegger. The manner of the work is exegetical and dialectical. Its findings are generally, though critically, Heideggerian, but it affords a place of considerable—and not merely historical—importance to the elements of Aristotle's logical and ontological theory. Later chapters set forth aporetically certain problems arising in Heidegger's later work.

- The claim is often heard that attempts to treat God-talk as moral rather than metaphysical discourse are "reductionistic" with respect to traditional and popular religion. I attempt to answer that charge by showing how a normative (morally grounded) theology can develop doctrines of creation and providence. A God understood as Goodness per se can serve as the ultimate creator and ground of being. It is because there is something good to become that there is anything at all. The world is best loved and cared for when it is best inspired and empowered.
- STEARNS, J Brenton.** On The Impossibility Of God's Knowing That He Does Not Exist. *Journal Of Religion* 46,1-8 Ja 66.
- This is a refutation of Hartshorne's modal argument for God's existence. In particular, attention is paid to Hartshorne's assumption that an infallible knower (a modally coincident being for whom all actuals are actual and all possibles are possible) must be able to know his own non-existence, were that possible. I argue here that Hartshorne's God can be conceived only as outside the universe with which he is modally coincident, and in that case his own non-existence need not be within the scope of his possible knowledge.

- STEER JR, Alfred G.** *Goethe's Social Philosophy As Revealed In Campagne In Frankreich And Belagerung Von Mainz*. Chapel Hill Univ Of N Car Pr 1955.
- The author's thesis is that two perplexing works by Goethe, *Campagne in Frankreich* and *Belagerung von Mainz*, taken together, constitute a unified poetic expression of Goethe's social philosophy. The key to their interpretation is also the key to his social philosophy, namely—the "family" concept. In a brief section, the "family" is shown to be the social counterpart of Goethe's other archetypes, and thus a further result of his efforts to universalize his "morphological method of thought." The remainder of the study is a detailed examination of the texts in question, and of related material, in support of the thesis.
- STEG, Doreen E.** Some Aspects Of Teaching And Learning. *Proc Phil Educ* 20,133-139 Mr 64.
- STEGEMAN, Beatrice (ed).** *Parables And Problems*. Winona MN 1968.
- Many American philosophers concentrate on a series of philosophical problems that include social philosophy and civil disobedience. Edward Madden gives historical background in "Moral Theology and Civil Disobedience in the 1840's: A Parable for our Times." Kurt Leidecker continues with "From St Louis Idealism to Transcendentalism and Zen." Charles Hartshorne explains theoretical bases in "The Concept of Equality" while Lewis Ford adds a Whiteheadian viewpoint in "Divine Persuasion and the Concept of the Good." John Lachs gives an alternative approach in "Santayana's Ethical Relationism" and Philip Wiener summarizes one American contribution to philosophy in "Pragmatism and Peirce."
- STEGEMAN, Beatrice.** "Introduction: Past Themes And Present Problems" in *Parables And Problems*, Beatrice Stegeman (ed). Winona MN 1968.
- Several prominent American philosophers from various historical periods of Puritanism, Deism, Transcendentalism, and Pragmatism have concentrated on a distinctive set of philosophical problems such as moral infallibility, moral responsibility, social reform, civil disobedience, democracy, science, practicality, pluralism, and pragmatism. Several leading philosophers believed that they had an absolute intellectual method to truth, an absolute ethical commitment to this truth, and an absolute moral responsibility to effect this truth within society. Many not only tried to reorganize society but actually succeeded in their reforms, so American philosophy may be exemplified in its philosophers' work as well as in their books.

STEGEMAN, Beatrice. Science As Art. *Bull Atomic Sci* 25,27-30 Ap 69.

A scientific theory may be interpreted as an art object with an art object's distinctive elements, form, and central image by using an aesthetic analysis to reveal types of creativity within scientific work, several similarities between art and science, and some distinguishing features of the two related disciplines.

STEIN, George. *The Ways Of Meaning In The Arts*. NY Humanities Pr 1970.

We often hear it said of works of art, "I enjoy it, but does it mean anything?" This leads to other questions, such as "Is art in any sense a language, as German and French are languages?" In the book under review, the author claims that such questions can only produce confusion unless we first clarify the sense in which art works could be said to mean anything. Certainly words and sentences have meaning, but we can also say "That black cloud means rain before morning" or "Behavior of that sort means that Jones is mentally ill." G Stein claims that art works can have meaning in these senses, too. He distinguishes four types of meaning in the arts which he designates as: Relational, Interpretive, Contextual and Referential meaning. These are clarified in the text, and lead to a discussion of the sense in which art works may be said to be translatable.

STEIN, Jack M. Schubert's Heine Songs. *J Aes Art Crit* 24,559-566 Sum 66.

STEIN, Roger B. *John Ruskin And Aesthetic Thought In America 1840-1900*. Cambridge Harvard Univ Pr 1967.

The basic concern of this study of Ruskin's ideas and their impact on the American scene is the detailed examination of the ideas and the diverse phases of the development of American aesthetic thought and art criticism during the nineteenth century. The author shows how Ruskin's writings and personal change in outlook helped shape American views on art, how American readers reacted to his ideas and how both constitute a record in the development of taste that can be best understood within the broader context of American intellectual history.

STEINER, Arpad. A Mirror For Scholars Of The Baroque. *J Hist Ideas* 1,320-334 Je 40.

STEINER, Mark. *Mathematical Knowledge*. Ithaca NY Cornell Univ Pr 1975.

The author, writing as a Platonist, criticizes several views about the possibility of learning mathematical truths. He begins by parrying two objections to logicist epistemology. His responses emphasize the logicist reduction to set theory, so he considers that theory's foundational inadequacies as devastating. He then defuses Quine's reduction of numbers to sets and rejects Benacerraf's dismissal of any arithmetic ontology. The appendix defends Hilbert's emphasis on consistency by proposing a theory of weak consistency proofs.

STEINER, Robert L and Weiss, Joseph. Veblen Revised In The Light Of Counter-snobbery. *J Aes Art Crit* 9,263-268 Mr 51.

STEINKRAUS, W E (ed). *New Studies In Hegel's Philosophy*. NY 1971.

Fourteen scholars from eight countries have cooperated in the production of this volume. After an initial "Plea for Hegel" by Sir Malcolm Knox, three essays on the *Phenomenology* follow. Hegel's impact on and relation to other thinkers is considered in the next four essays. Two essays on Hegel and the philosophy of religion follow.

STEINKRAUS, Warren E. A Clue To Artistic Interrelations. *Personalist* 45,90-93 Wint-Ja 64.

The arts are not apparently interrelated because they affect the senses similarly or because there are likenesses of imagery or ideational content. Rather it seems that certain poems, paintings and sculptured works "belong together" because they induce a similarity of response. They call forth a similarity of emotional tone in the sensitive observer. There is also the possibility of a kinship of kinaesthetic effect. Examples are given to substantiate this interpretation.

STEINKRAUS, Warren E. Berkeley's Wisdom On Other Minds. *Phil Forum (Boston)* 15,3-24 1957.

STEINKRAUS, Warren E. Five Letters Of Bowne To James Mudge. *Personalist* 46,342-347 Sum-Jl 65.

Borden P Bowne's ability to apply philosophical principles to practical problems of ethics and administration is shown in these five letters to his friend James Mudge, and insight into Bowne's personality is thereby gained. Background editorial material is supplied.

STEINKRAUS, Warren E. Is LaMettrie Out Of Date? *Personalist* 43,180-187 Spr-Apr 62.

Against persistent journalistic-like pronouncements which seek to pass on philosophical views by claiming they are not in accord with "modern science" or by using such epithets as "out of date," this study shows that LaMettrie's thought, though not widely studied now, has relevance and could be made more "timely" with some skillful manipulation of academic "pressures" and the use of financial resources. Hasty rejection of any thinker by epithet indicates an intellectual nakedness not worthy of a philosopher.

STEINKRAUS, Warren E. Professor Helsel And Bowne. *Personalist* 36,281-285 Sum-Jl 55.

This article examines Professor Paul Helsel's earlier study (*Personalist*, Volume 36, pages 47-58) of relations between the thought of F R Tennant and Borden P Bowne. It claims that Helsel misinterprets Bowne's views on the objective order of sensations and his unique doctrine of "transcendental empiricism." Furthermore, Helsel's claim that Bowne's metaphysics is derived from a theological postulate overlooks that thinker's broad empirical grounding for theism which is really more in line with Tennant's thought than Helsel admits.

STEINKRAUS, Warren E. Royce's Use Of The Term "Self". *Personalist* 40,362-368 Autumn-O 59.

A consideration of J H Cotton's diligent exposition of *Royce on the Human Self*, points out that Royce uses "self" to mean the specious present, the whole person, the Absolute, and ethical achievement. In so doing he tends to confuse epistemological, ontological and ethical categories thus leading to serious difficulties in his own philosophy.

STEINKRAUS, Warren E. The Cardinal Dogma Of Religious Existentialism. *Religion In Life* 29,575-586 Autumn 60.

The central difficulty of Religious Existentialism is its dogma that reason cannot investigate alternative theories until it is informed by faith. Its corollary is that "reason stands... under the bondage of estrangement" and needs its eyes opened by revelation. This Augustinian-Tillichian view is shown to be epistemologically untenable for (1) it uses reason to overthrow reason, (2) makes empirically unsupported claims about the "primacy of faith" and (3) wrongly asserts the incompatibility of the person as agent and as contemplator. It fails to recognize the wisdom of W E Hocking's "principle of alternation" which shows that analysis and contemplation are intermingled, interactive and inseparable in any wholesome person.

STEINKRAUS, Warren E. Two Philosopher-Bishops. *Journal Of Bible And Religion* 25,24-29 Ja 57.

The thought of Bishop Francis J McConnell (1871-1953), an ecclesiast with profound philosophical interests, is compared with that of Bishop George Berkeley (1685-1753), a philosopher with ecclesiastical propensities. Both manifest pioneering interests in education, a concern for the socially and economically exploited of their countries, a passion for justice and human freedom, as well as systematic idealistic theism. McConnell developed implications of Berkeley's thought in such books as his *Diviner Immanence, Is God and The Christlike God*. He regarded Berkeley so vital a figure "as almost to be called a contemporary of many teachers in foremost philosophical choirs."

STEISS, Albert J. Outline Of A Philosophy Of Art. *Thomist* 2,14-58 Ja 40.

STENDAHL, Brita K. *Soren Kierkegaard*. Boston Twayne 1976.

Integrating numerous biographical details and selected literary themes, the author presents a portrait of Kierkegaard the man and the sophisticated literary genius who wears a variety of pseudonymous masks in order to hide the thinker who desires to lead men, by indirection, along the path to his strenuous version of Christian existence. Kierkegaard is said to have consciously related imagination and actuality, to have used a poetic mode of expression to present truths about human existence. From his early critical, preparatory work on Hans Christian Anderson (*Papers of One Still Living*) through his master's thesis, *The Concept of Irony* and throughout all his major works, the tools of irony, humor and indirect communication are used to create a "consistent whole."

STENIUS, Erik. Are True Numerical Statements Analytic Or Synthetic? *Phil Rev* 74,357-372 Jl 65.

To find out for what number x the statement $7 + 5 = x$ is true, we have to apply a certain procedure, called addition, to 7 and 5, and observe what number we obtain. Prima facie such a procedure has the character of an experiment; and that this is so, is an argument against the analyticity of (true) numerical statements. The author examines counter-arguments, as offered by Ayer; and he arrives at the conclusion that they show merely that it is analytically true that the result of an arithmetical calculation is unique. It follows that numerical statements can be interpreted as (essentially) singular, synthetic statements, which, being verified by one correct observation, are neither *a priori*, nor the result of inductive generalization. The author thinks, however, that a numerical statement can also be interpreted as analytic, and characterizes the relation between these two interpretations.

STENNER, Alfred J. On Predicting Our Future. *J Phil* 61,415-427 Jl 64.

A much-discussed difficulty hindering theory construction in the social sciences is the problem of explaining self-vitiating forecasts. Inasmuch as our ability to predict the future depends upon the adequacy of the theories at our disposal, which is required for predicting our future is a theory which will enable us to determine which of our utterances are self-vitiating. In opposition to those who have claimed that

- self-vitiating phenomena pose an insurmountable *logical* problem, the author argues that the problem is an empirical one and that its resolution is dependent on our ability to construct a theory of self-vitiation.

- STERLING, Richard W.** *Ethics In A World Of Power: The Political Ideas Of Friedrich Meinecke*. Princeton NJ Princeton Univ Pr 1958.
- The author states "it is the purpose of this book to explore the problem of moral conduct in foreign policy through the medium of an individual thinker." The book traces the development of the ideas of Friedrich Meinecke (1862-1954), from the conception of "the nation-state as the ideal political community" toward a more general concern with "the great issues of politics and morality." Meinecke elaborated "an ever more explicitly dualistic philosophy of life" in which the statesman is "fated to be continually torn by the injunction to be powerful and the injunction to be good." This interplay of power and moral values, each begetting each, was for Meinecke at the center of the problem of politics. The author concludes that "If one had to sum up Meinecke's political thought in a phrase it might be said that he sought to preserve the state contract by every means except an irremedial loss of personal integrity." "This ultimate primacy of the individual conscience enabled Meinecke finally to divest the nation-state of the aura of the absolute which he had conferred upon it."
- STERN, Adolph J.** The Enigma Of Matter. *Main Currents* 12,51-55 Ja 56.
- STERN, Alfred.** *Sartre: His Philosophy And Existential Psychoanalysis*. NY Liberal Arts Pr 1953.
- In his treatment of Sartre's existentialist philosophy, the author, a graduate of the University of Vienna who now teaches at the California Institute of Technology, endeavors to show how much of Sartre's thought is original, being formulated under the special conditions of the occupation of France, and how much derives from earlier Western thinkers all the way from Parmenides to Heidegger. The second part of the book discusses the new type of psychoanalysis stemming from Sartre's philosophy of value, and its relation to the rival doctrines of Freud, Adler and others. Many excerpts from Sartre's novels and plays are used as illustrations.
- STERN, Alfred.** *The Search For Meaning: Philosophical Vistas*. Memphis TN Memphis St Univ Pr 1971.
- This book is a collection of twenty-five essays, most of them new, on values in science, ethics, politics, literature, and religion and on such figures in the existential and phenomenological movements as Nietzsche, Unamuno, Ortega, Sartre, and Camus. The author proposes as a single unifying axiological principle the aim of the will to overcome opposition between subject and object. The principle is the base for his claim of the necessity for the individual's commitment to a life project and for religious faith. Index of proper names and errata sheet are given.

- STERN, Herold S.** *Social Nonscience: A Critique Of Social Science*. Champaign IL Stipes 1973.
- This book first argues that there can never be a social science because a value-free social science presupposes one philosophical orientation—a non-cognitive ethics—which is unacceptable to at least one other orientation—cognitivism. Second, social science logically presupposes metaethics. Because there is no interpersonal agreement in metaethics, social science lacks interpersonal agreement because it cannot evade excluding some positions. Part two maintains that the empirical "sciences" in fact are not sciences; therefore, there cannot be a behavioristic social science. Since the rules of scientific method do not constitute an algorithm, all empirical statements lack intersubjective testability.
- STERN, Herold S.** The Concept Of Chastity In Biblical Society. *Journal Of Sex Research* 2,89-97 1966.
- This article presents a philosophical argument for female chastity—"the double standard"—through an analysis of human sexual attitudes.
- STERN, Herold S.** The Ethics Of The Clean And The Unclean. *Judaism* 6,319-327 1957.
- Western philosophers do not recognize that the dietary laws as such can have any ethical significance. Food is amoral. The article presents a philosophical argument for dietary laws by analyzing basic human attitudes. The Bible is shown to have definite philosophical principles, and its approach to ethical questions is shown to be radically different from that of Western philosophy.

- STERN, Kenneth.** Private Language And Skepticism. *J Phil* 60,745-758 N 63.
- This paper deals with certain epistemological problems raised by Wittgenstein in connection with his thesis of the impossibility of a private language. The contention is that Wittgenstein carries on a tradition of Cartesian skepticism concerning the validity of the basic kinds of knowledge and, in so doing, raises problems that have been adequately dealt with by Peirce and others of the American pragmatic tradition. It challenges Wittgenstein's belief that whenever a descriptive term is used there is recognition and remembering going on and his belief that a memory claim must be publicly checkable in principle.

- STERN, Laurent.** Fictional Characters, Places, And Events. *Phil Phenomenol Res* 26,202-215 D 65.
- Under the governing convention of works of literary art, authors of such works cannot successfully refer to themselves within their work. We must make-believe that the stories told within literary works of art are told by narrators of such works, i.e., by fictional characters. Fictional sentences are used (1) to create fictional characters, objects, places and events, i.e., an imaginary world, and (2) to talk about this imaginary world. It is argued that sentences that are used to create an imaginary world, (1) above, act as performatives and only sentences that are exclusively used to talk about such a world, (2), can contain true or false fictional statements. Sentences that in other contexts could be statements about particulars, logical truths, empirical generalizations, etc., serve in literary works of art as vehicles to permit and facilitate our understanding of an imaginary world within a work of art.

STEWART, John B. *The Moral And Political Philosophy Of David Hume*. NY Columbia Univ Pr 1963.

This book is a scholarly examination of all the major elements of Hume's thought focusing on his moral and political thought. In the introduction Hume's life and work are placed in the socio-political-economic context of 18th Century Scotland. Hume's approach to moral and political questions, influenced by this objective context, was nonetheless shaped by his epistemology as presented in the early work, *The Treatise of Human Nature*. Not only are the abstruse issues of epistemology and ethics in Hume's philosophy discussed, but also Hume's positions regarding the principles of economic and social organization and his aversion to religion are examined. Hume's *History of England* is studied, and one major result is that Hume emerges as a conservative who had so "transcended" conservatism as to be equally regarded as a liberal.

STEWART, John P and Sweigart Jr, John W. Another Look At Fact, Fiction, And Forecast. *Phil Stud* 10,81-88 1959.

The article seeks to correct some major misunderstandings of Goodman's important book on induction, notably those published by Professor A Pap. A brief, technical exposition is given of the sections on dispositional terms and possible events, with lengthier examination of the problems of criteria for projectible, lawlike hypotheses and their relation to paradoxes such as "grue" and "bleen"—all without commitment to a platonistic ontology. Additional insights are thus provided into Goodman's program for confirmation theory and the other areas above, as well as the general problem of counterfactual conditionals.

STIERLIN, Helm. Existentialism Meets Psychotherapy. *Phil Phenomenol Res* 24,215-239 D 63.

This article examines the contribution of existentialist thinking to psychotherapy, and attempts a critique of these ideas as to their value in psychiatric theory and practice. It elaborates the theme of man's existence as an unstable equilibrium and deals at some length with recent insights from the study of schizophrenia. The different uses of language are described, by alluding to Heidegger, Jaspers and Boss. There is a suggestion at the end of the seeming affinity and complementarity between the schizophrenic condition and existentialism!

STIERNOTTE, Alfred P (ed). *Mysticism And The Modern Mind*. NY Liberal Arts Pr 1959.

STIERNOTTE, Alfred P. *God And Space-Time: Deity In The Philosophy Of Samuel Alexander*. NY Philosophical Lib 1954.

Alexander's conception of the "divine element in the universe" is examined and criticized from the point of view of religious experience and availability. Difficulties are found in the idea of the divine as emergent deity and as the whole of Space-Time, but the conception of the divine as "the immanent creativity of the universe" is accepted. Alexander's value theory is criticized as "inherently subjective," the author arguing for "some form of value realism" as against "Alexander's basic conviction that values are human inventions." The latter's view of religious experience as *sui generis* is compared with that of Rudolf Otto; and criticisms of Alexander brought forward by Laird, Leighton, Greene, Urban and others are cited and discussed.

STILLMAN, Peter G. Hegel's Critique Of Liberal Theories Of Rights. *Amer Polit Sci Rev* 67,1086-1092 S 74.

In "Abstract Right," Hegel criticizes liberal theories of right. In terms of content, Hegel sees that the subject of rights is only a narrow person; that he has limited freedom; and that, when he acts on his rights, he produces terror. In terms of formulations, Hegel criticizes the pervasiveness of contract relations; argues that the state cannot be derived from the natural man's right to punish; and sees that civil society does not only limit freedom. By transforming natural to abstract rights, Hegel retains much of the substance of rights, while concurrently preparing for the later sections of the text which try to overcome the inadequacies of a political theory based only on rights.

STINE, Russell Warren. *The Doctrine Of God In The Philosophy Of Fichte*. Philadelphia 1945.

A doctor's thesis which begins with Fichte's troubled mind as a young theological student among Protestant conservatives to the achievement of a philosophy bestowing religious peace. A detailed examination of the character of God is given major attention in the concluding sections with sufficient attention to Fichte's doctrine of freedom.

STOJANOVICH, Svetozar. Contemporary Yugoslavian Philosophy. *Ethics* 76,297-301 JI 66.

In the post-war period Yugoslavian philosophy has been predominantly Marxist, but with four different orientations in four different periods: Russian Marxism, Stalinism, a "back to Marx movement," and a non-dogmatism, even, relatively, in relation to Marx, characterized by the belief that Marx should not be made a barrier to understanding contemporary problems. The contemporary ideology is socialistic humanism and contemporary philosophy is critical Marxism. Logic, epistemology, the philosophy of science, theory of meaning, and ontology are cultivated, but philosophy is always thought to involve social commitment.

STOKER, H G. Philosophic Freedom. *Phil Today* 5,138-141 Sum 61.

STOKES, Adrian. Form In Art: A Psychoanalytic Interpretation. *J Aes Art Crit* 18,193-203 D 59.

STOKES, Michael C. *One And Many In Presocratic Philosophy*. Washington DC Ctr For Hell Stud 1971.

The author has two theses. First, Parmenides does not argue from unity to the denial of plurality: his interest is in the being/not being antithesis rather than in the one/many problem. In the second place, 'one' and 'many' are ambiguous terms whose range and variety of meanings the Presocratics did not suspect. The analysis of the antithesis of one and many depends upon the separation of the various senses of the terms with such linguistic tools as were developed by Plato, Aristotle, and later by linguistic analysts.

- STOLNITZ, Jerome.** On Objective Relativism In Aesthetics. *J Phil* 57,261-276 Ap 60. In *An Analysis of Knowledge and Evaluation* C I Lewis tries to establish evaluation as one among other kinds of empirical knowledge and employs the concept of potentiality to defend objective relativism in aesthetics. The author criticizes Lewis' approach, showing several respects in which it is misleading or futile.
- STOLNITZ, Jerome.** On The Origins Of "Aesthetic Disinterestedness". *J Aes Art Crit* 20,131-144 Wint 61.
- STOLNITZ, Jerome.** Some Questions Concerning Aesthetic Perception. *Phil Phenomenol Res* 22,69-87 S 61. It is stated that a distinctive perceptual attitude or "set" has revolutionized modern aesthetics. However, this attitude itself has not been subjected to self-conscious scrutiny. The author sympathetically explores the work of Vincent Tomas and the phenomenology of the aesthetic attitude. There is agreement, that in aesthetic experiences one is made aware of familiar appearances, not of familiar objects. Four definitions are elaborated—that this attitude is disinterested, very attentive, appearances are distinguished from reality, and the object is not a sign. A call for further analysis of the features of the esthetic attitude is made.

- STONE, Julius.** *Legal System And Lawyers' Reasonings*. Stanford CA Stanford Univ Pr 1964.
- STONE, Julius.** *Social Dimensions Of Law And Justice*. Stanford CA Stanford Univ Pr 1966. The present volume deals with law and society, or sociological jurisprudence. Stone begins with a long survey of the history and achievements of sociological jurisprudence. He continues with an examination of various theories of the historical and social determinants of law. Then he turns to a detailed critical study of how 20th century western law (chiefly the British Commonwealth and the United States) has developed in response to the pressures of conflicting interests, or rights, or policies. Stone then examines, and rejects, theories which deny that law has any independent existence and function. Next he surveys the sociology of value and theories of power, since law must be understood as a mediator between values and power. Finally he draws out the implications of all the above studies with regard to the present potentialities and limitations of law as an instrument of social control and justice. He gives a detailed survey of the present tasks of law in western society, and concludes with an account of the justice that is now attainable through law.
- STONE, Julius.** *The Province And Function Of Law: Law As Logic, Justice, And Social Control, A Study In Jurisprudence*. Cambridge Harvard Univ Pr 1950. No one who would be familiar with the trends of jurisprudence and the significant names and schools in the past several centuries can afford to neglect this work. It covers them in the framework of the author's views about law as logic, as justice and as social control, with his especial emphasis upon the last category as provocative of the central question of the day: "...whether that 'control of controls' which is another name for 'planning' is possible, and whether, if possible, it can be reconciled with traditional democratic freedom."

- STOOPS, J. D.** A Bio-Social Interpretation Of Religion. *Humanist* 5,187-192 Wint 45.
- STOOPS, John A.** *Philosophy And Education In Western Civilization*. Danville IL Interstate Pr 1971. This book is for teachers. It places education in the perspective of western philosophy. It purports to show the reader how to form educational theory from educational practice; includes origins of philosophy and education in the western world; and analysis of formal idealism and classical realism as related to modern education; Thomism and the medieval synthesis; and perseverance of the Thomistic tradition in American Education. It gives overviews of European realism, American pragmatism and the empirical tradition in relation to schools and school procedures. It presents synopses of European Idealism, American Idealism, and modern thought in education and the arts. It reviews the emergence of Phenomenology and existentialism and related ideas in education.
- STOOPS, John A.** *Religious Values In Education*. Danville IL Interstate Pr 1967. This book is a critique of educational schemes which are presumed to be devoid of religiosity or presume to be devoid of religious content. An argument that all men are in some way religious, and that any scheme for education (public or private) which does not deal with religious development is inadequate and destined to fail. This argument leads to an appeal that the affectivity of schools and educational programs be strengthened. Schools must pay meaningful tributes to the ideals of western civilization, work with churches and synagogues, and provide highly enspirited educational experiences.
- STOOPS, John A.** *The Education Of Inner Man*. Danville IL Interstate Pr 1969. The book is divided into four parts. Part I—The way in which ideals such as those inherent in work and love can bring order to the disordered world of the inner man. The importance of these ideals is demonstrated by the effects of burlesque. Part II—The nature and operational role of religious values in the development of the inner man. God ideas which are present in American schools. Part III—Autonomous ideals and the study of education. The search for wisdom and knowledge in education. Part IV—The alienation of institution and idea. The university as will and idea and the characteristics of felicitous change.

- STOUGH, Charlotte L.** *Greek Skepticism: A Study In Epistemology*. Berkeley Univ Of Calif Pr 1969. This book is an exposition and discussion of skeptical epistemology during six centuries. This volume examines the Pyrrhonists of the fourth and third centuries; the academic skeptics; Aenesidemus; and Sextus Empiricus. The method of procedure is citation followed by commentary. Miss Stough finds three common features in the movement: practical orientation, denial of certainty, and suspension of judgment.
- STOVE, D.** Hume, Probability, And Induction. *Phil Rev* 74,160-177 Ap 65. On the basis of certain passages in his writings, Hume is nowadays certified, by some leading philosophers and historians, as having proved not only that inductive arguments can never be demonstrative, but also that they can never even be probable. This article points out that Hume uses "demonstrative" and "probable" in order to distinguish between arguments, not with respect to their degree of conclusiveness, but with respect to the nature of their premisses. And it tries to show, by a detailed examination of the argument in the passages in question, that far from having refuted the thesis that there are probable inductive arguments, Hume never contemplated it.
- STOVER, Robert.** *The Nature Of Historical Thinking*. Chapel Hill Univ Of N Car Pr 1967. The main topics are natural order intelligibility, deterministic intelligibility of rational action, ordinary history, and the standpoint of living in the world. Of special note are the varied and complementary treatments of the sense events. There must also be seen from two points of view: the natural order and the lived-in world. Reconstruction may be narrative of a sequence of events, evaluational interpretation of current import, disclosure of the meaning of events, purposive interpretation (intentional) from the standpoint of an agent. Historical works may be dis-integral, showing the incoherence of everyday life.
- STOWE, Everett M.** *Communicating Reality Through Symbols*. Philadelphia Westminster Pr 1966.
- STRACHEY, Alix.** *The Unconscious Motives Of War*. NY Internl Univ Pr 1957. Mrs James Strachey attempts to show why the psychological obstacles to peace are so ingrained by the individual's membership in groups from childhood on. She relates the "perils of regression" to the dangers of war. The latter part of the book, centering on the problems of "state mentality," are particularly relevant to the social and moral aspects of peace.

- STRASSER, Stephan.** *Phenomenology And The Human Sciences*. Pittsburgh Duquesne Univ Pr 1963.
- With the recognition of the "phenomenological method as an indispensable tool of the ontologist," the author uses this method in an attempt to provide a clarification of the fundamental concepts of the scientific theory of the empirical psyche. The intention of this study is to give "a new impetus" to a "formal definition of the object of psychology and to trace the limits which separate the domain of psychology from those of physiology and biology." After an examination of how the problem of the psyche has been handled by Descartes, Locke, Kant, Rickert, Scheler, and Husserl, there is a second and major section devoted to an exposition of the soul and the besouled body. This second section has three studies: the ego as the author of its acts; the corporeal ego considered as an aspect of a philosophy of nature; and, the spiritual ego as the interiority of consciousness. By way of conclusion the author distinguishes between the objects of empirical and philosophical psychology, yet affirms the necessity of continual collaboration.
- STRASSER, Stephan.** *The Idea Of Dialogal Phenomenology*. Pittsburgh Duquesne Univ Pr 1969.
- The basic idea of this book is that Phenomenology has reached an impasse because it has neglected the role of dialogue. In particular, the author focuses on the inability of Husserl's transcendental phenomenology to solve the problem of intersubjectivity. He claims that Husserl did not adequately account for the social dimensions of human existence; so, he sets out to reinterpret the major themes of the movement. He gives a new dimension to the notion of dialogue (the concept is broadened to include any form of communication between subjects and not just the use of symbolic sounds).

- STRATHMANN, A.** *Sir Walter Raleigh, A Study In Elizabethan Skepticism*. NY Columbia Univ Pr 1951.
- Dr Strathmann studies in detail the meaning of the charges frequently hurled at Raleigh in his own day. He shows that Raleigh did not challenge scriptural authority or religious faith, but did insist upon intellectual freedom in the investigation of "second causes" and in the study of "natural philosophy." In distinguishing between Raleigh's religious orthodoxy and his philosophical skepticism, Dr Strathmann shows how this representative Elizabethan figure approached a major problem of his time: reconciling ancient faith and authority with the new learning. Raleigh's skepticism is traced through his major works back to the skeptical thought of ancient Greece.

- STRAUSS, Erwin W (ed)** and Griffith, Richard M (ed). *Phenomenology Of Will And Action*. Pittsburgh Duquesne Univ Pr 1967.
- Paul Ricoeur outlines the contributions of the phenomenology of will, of intentional consciousness, and of immediate awareness as the result of repression and introjection. Ernst Jökl examines the specificity of the acquisition of skills in both physiological and phenomenological perspectives. Norman Geschwind concludes from a study of "apraxias" that failure to comply with verbal commands directly contradicts philosophical and scientific notions of the unity of consciousness. Erwin W

Straus sees "anosognias," cases in which paralyzes on the left side are ignored by patients who are fully conscious. Adrian van Kaam studies the addictive mode of existence in contrast to laboring and playful modes. Russell R Monroe interprets the compulsive personality as an attempt to exorcise the complexity and mystery of Being. Joseph Lyons situates the fanatic at one border of the intersubjective realm, the sadist at another. Maurice Natanson discusses "Man as an Actor" and Richard M Griffith analyses "Simulation and Dissimulation."

- STRAUSS, Leo (ed)** and Cropsey, Joseph (ed). *History Of Political Philosophy*. Chicago Rand McNally 1963.
- STRAUSS, Leo.** *Liberalism Ancient And Modern*. NY Basic Books 1968.
- STRAUSS, Leo.** *Natural Right And History*. Chicago Univ Of Chicago Pr 1953.
- STRAUSS, Leo.** *On Tyranny: An Interpretation Of Xenophon's Hiero*. NY Polit Sci Classics 1948.
- Professor Strauss' monograph is a trenchant analysis of the only classical work on tyranny. The signal contribution of the study lies in its method. Strauss holds that the key to understanding the work of Xenophon is the *dialogue* form which they employ. The *Hiero* presents a conversation between the tyrant Hiero and the poet Simonides. Basically, the dialogue expresses the dramatic conflict between the quest for truth and the tyrannical pressure of society.
- STRAUSS, Leo.** *Persecution And The Art Of Writing*. Glencoe IL Free Pr 1952.
- STRAUSS, Leo.** *Socrates And Aristophanes*. NY Basic Books 1966.
- STRAUSS, Leo.** *The Argument And The Action Of Plato's Laws*. Chicago Univ Of Chicago Pr 1975.
- This book comments on the *Laws* by leading the reader through the dialogue by means of a book-by-book interpretative narration. The major purpose of the commentary is to provide a reading of the dialogue which displays its structural arrangement and the continuity of the argument. The most distinctive features of this narrative is its emphases upon the speech/deed and nature/convention distinctions and upon the rather meagre complement of dramatic elements in the dialogue—features such as the points at which oaths occur or the opening words of some books.
- STRAUSS, Leo.** *Thoughts On Machiavelli*. Glencoe IL Free Pr 1958.
- Strauss' thesis is that "Machiavelli was a teacher of evil." In Chapter I Strauss explains the "The Two-fold Character of Machiavelli's Teaching" not in terms of a shift in doctrines from the *Discourses on the First Ten Books of Livy* to the *Prince* but as a single doctrine expressed in both works by means of an elusive ironic method. In Chapter II Strauss construes Machiavelli's intention in the *Prince* to be "not the political liberation of Italy from the barbarians but the intellectual liberation of an Italian elite from a bad tradition." In Chapter III Strauss explores the intention of the *Discourses*, and by examination of Machiavelli's conceptions of Fortuna and virtue, argues that Machiavelli's theory of man and politics is antithetic to the conceptions of the great tradition. Chapter IV further surveys Machiavelli's teaching, his soulless humanism, his political realism, his republicanism based on a selfish conception of the common good, and the relation of the founder of new orders with tyranny.

- STRAWSON, P F.** Intention And Convention In Speech Acts. *Phil Rev* 73,439-460 O 64.
- The aim is to elucidate Austin's conception of an "illocutionary act." In the case of some illocutionary acts which are not essentially conventional it is shown that a concept of communication-intention due to H P Grice can be used to explain why the illocutionary act has some of the features attributed to it by Austin, in particular that of being "meant to be made explicit" by means of a performative formula. The resulting cannot be generalized to cover all cases of illocutionary acts, for it does not fit the essentially conventional illocutionary acts which were Austin's starting-point. Some common, and some distinguishing, features of these contrasted types of case are set out, and a caution is added against supposing that there are just two clearly exclusive and exhaustive types of case.
- STRAWSON, P F.** On Justifying Induction. *Phil Stud* 9,20 1958.
- STRAWSON, P F.** Singular Terms And Predication. *J Phil* 58,393-411 JI 61.
- The author examines two attempts to explain Quine's ideas of singular term and of general term in predicative position. He concludes that, underlying all that Quine says about this distinction, is an account which fuses the identificatory criterion and the type-criterion. Referential position, he asserts, is the position primarily and fundamentally occupied by a term definitely identifying a spatio-temporal particular in a sentence coupling that term to another signifying a property-like or kind-like principle of grouping particulars. In practice, the quantification test for referential position proposed by Quine is a good test, but only because the notions of referential and predicative position have to be understood in the way outlined in this paper.

- STRENG, Frederick J.** The Problem Of Symbolic Structures In Religious Apprehension. *History Of Religions* 4,126-153 Sum 64.
This essay analyzes three types of symbolic structures in religious apprehension. It shows that religious expressions are not only descriptions of ultimate reality, but also means for realizing it. It also suggests that there is not only one general kind of reality called "ultimate reality"; rather, different "linguistic logics" expose or give structure to different sorts of ultimate reality. The three structures of apprehension discussed are (1) intuitive, (2) mythical, and (3) dialectical.

- STROLL, Avrum.** *The Emotive Theory Of Ethics*. Berkeley Univ Of Calif Pr 1954.
The author confines his study of the emotive theory of moral judgments to logical issues, analyzing two versions of it, one of which he regards as that of Professor Ayer, and the other that of Professor Stevenson. He finds Ayer's version stronger on the first score, and Stevenson's on the second. His chief argument seems to be directed at "emotive meaning" as used by Stevenson, whose position he regards as "a linguistically disguised version of one form of traditional naturalism."

- STRONG, Tracy B.** *Friedrich Nietzsche And The Politics Of Transfiguration*. Berkeley Univ Of Calif Pr 1975.
Beginning with a consideration of Nietzsche's claim that Western culture and thought is entering a period of nihilism, the author traces Nietzsche's critiques of culture, truth and traditional Socratic-Christian morality in order to see the positive "politics of virtue" that is sketched on a large canvas. Nietzsche's genealogical approach to an interpretation of the meaning and direction of Western values is clearly explicated and the relationship between the Dionysian insight into the true and tragic nature of 'reality' and the Apollonian 'illusion' is traced through Nietzsche's ingenious analysis of the development of Greek culture. There are detailed treatments of Nietzsche's critique of the political tendencies in the nineteenth century and their reflection of a group morality exacerbates the negativistic movement of modern times.
- STROUD, Barry.** Wittgenstein And Logical Necessity. *Phil Rev* 74,504-518 O 65.
Stroud defends Wittgenstein's account of logical necessity against Dummett's charge that it is a "full-bodied conventionalism." He considers several of Wittgenstein's examples of people who "do not play our game" when they count, calculate, infer, etc.—people who remain rational yet deny what we consider to be necessary truths. Only if we could understand these people's techniques as intelligible alternatives to our own, Stroud argues, would Wittgenstein be presenting them to argue for a radical conventionalism. But we cannot understand them in this way; so Wittgenstein's conventionalism is not radical conventionalism.

- STUDDERT-KENNEDY, Gerald.** *Evidence And Explanation In Social Science, An Interdisciplinary Approach*. Boston Routledge & Paul 1975.
The main concern of this book is with the nature of the gap between the theoretical issues raised by social scientists and the material organized in an empirical analysis. Among the studies with respect to which these themes are developed are Evans-Pritchard's work on the Nuer and interpretations of more complex social systems by Geertz, Alavi and Balandier.
- STUERMANN, Walter E** and Hill, Johnson D. *Philosophy And The American Heritage*. NY Philosophical Lib 1961.
Hill is chairman of the board of the Atlas Life Insurance Company; Stuermann is professor of philosophy at the University of Tulsa. Their book sets forth the principles which, in their opinion, constitute the American way of life; for example, in politics, suffrage as a basic human right and responsibility; in economics, opposition to "levying excessive taxes on those who have been financially successful;" in morals, respect for the personality of others and of oneself; in religion, faith in a divine order and opposition to naturalism; in education, recognition of superiority as contrasted with a "democratic" enhancement of mediocrity; in social organization, concern over the mechanization of life; and in national appraisal, an optimistic bias.

- STULMAN, Julius (ed)** and Laszlo, Ervin (ed). *Emergent Man: His Chances, Problems And Potentials*. NY Gordon & Breach 1973.
To show the way from outer concerns to the inner man, from things to values, from facts to integration, is the stated purpose of this collection of eleven essays. Areas or aspects of the human situation which are dealt with here range from biology, art, and education through the quality of life, alternative future organizations of society, and interplanetary settlement.
- STUMPF, Samuel Enoch.** *Morality And The Law*. Nashville Vanderbilt Univ Pr 1966.
This book provides an analysis of law and of its relationship to morality. Stumpf denies that the law can be adequately defined or accounted for without any reference to moral conceptions. He discusses a number of legal philosophies: the realistic theory (which interprets law to be "what the courts do"), legal positivism (which interprets law as command emanating from sovereignty), recent Soviet conceptions of law, and natural law theory. Of special interest is Stumpf's analysis of international law and his view that none of the existing legal theories seem able to adequately cope with international law. Stumpf's own theory is that although law involves the use of coercive power of the state, it is also a body of rules fashioned for regulating human conduct and fulfilling human ends. It is accordingly dependent upon a conception of morality.

- SUCHTING, W A.** Marx And Hannah Arendt's *The Human Condition*. *Ethics* 73,47-55 O 62.
Arendt's interpretation of Marx is erroneous in maintaining that his thought contains a "fundamental and flagrant contradiction." The contradiction she accuses Marx of is maintaining that man is essentially a laboring animal while seeing the goal of social revolution as freeing men from labor. But Marx held only that men were to be liberated from just that labor "determined by want and external utility," not from what labor would become in a realm of freedom. Marx's thought provides a better perspective on "the human condition" than does Arendt's.
- SUCI, George J** and Tannenbaum, Perry H and Osgood, Charles E. *The Measurement Of Meaning*. Urbana 1957.
Two interrelated theories of meaning are defended in this volume. The first proposes that a term, S, means T to a human being, H, if some of the responses H had made to an object or property, T, are elicited from H by the term S. To account for the acquired powers of S to elicit responses, the authors argue that H had frequently co-experienced S and T. The second theory is based upon the following three

assumptions: a) Suitable pairs of contrary terms may be considered ends of a meaning dimension; b) Sets of meaning dimensions can serve as axes of a meaning space or semantic space, upon which a distance function can be defined and in which an origin can be determined; c) by asking a subject, H, to associate a term S with those employed in defining a semantic space, L, psychologists can locate the place of S for H in L. To relate the first theory to the second, the authors reason that the direction of S in L will correspond to the reactions elicited by S; its distance from the origin, to the intensity of the elicited responses.

SUMBERG, Theodore A. La Mandragola: An Interpretation. *Journal Of Politics* 23,320-340 1961.

The first gem of Italian comedy, Machiavelli's play is a ribald spoof of marital fidelity. It is also, under the surface, a serious guide on how to carry out a conspiracy against a corrupt regime. A new republic is sketched in the hidden plot that touches at many points the famous tracts of the political philosopher. The opportunity that the

dialogue gave to Plato of speaking in assumed names this comedy gave to Machiavelli.

SUMBERG, Theodore A. The More Abundant Life. *Amer J Econ Soc* 21,1-9 1962.

This article examines the moral and political presuppositions of the increasingly worldwide surrender to the ideal of a higher and higher standard of living. Moral disaster ensues where the attack on poverty is put as the sole, or even chief, end of society since that attack favors the natural avarice of men increasingly used by technology. The practical wisdom of statesmen is also ousted in the egalitarian sovereignty of consumers immersed in vulgar self-indulgence.

SUMBERG, Theodore A. Toynbee And The Decline Of Western Civilization. *Social Research* 14,267-284 1947.

This article reviews Toynbee's scheme of world history as a successive series of encounters between man and the totality of his environment, physical and cultural, and criticizes his prescriptions for averting the allegedly impending disaster facing Western civilization—the disaster of industrialized warfare of national states cut loose from divine guidance. Evangelist as much as historian, Toynbee falls into an Augustinian conception of history as a catechism of errors whose chief lesson today is the need for Christian renewal to support a new unitary world civilization.

SUN, Stanislaus. The Doctrine Of The Li In The Philosophy Of Chu Hsi. *Int Phil Quart* 6,155-188 Je 66.

In this article the author intends to bring out two important points which seem to have been neglected by most commentators on Chu Hsi. First, admitting that the Li, in its physical aspect, is the immaterial principle which, together with the material force, enters into the constitution of all things, the author emphasizes that the Li is a moral principle and that all things, both animate and inanimate, in virtue of their sharing in the Li, are moral beings, and the whole universe is a moral universe. Second, the Supreme Ultimate is the Highest Li which comprehends all Li. It is one and immanent in each and every thing constituting the essence of all things. The author agrees with J Percy Bruce that it is the Supreme Being, but differs from him in the sense that this Supreme Being is not the Christian God.

SUPKE, Ivan. The Task Of Philosophy Today. *Phil Phenomenal Res* 24,117-124 S 63.

SUPPE, Frederick (ed). *The Structure Of Scientific Theories*. Urbana 1974.

This volume contains the proceedings of a symposium on the structure of scientific theories. The editor has prefaced the proceedings with an essay on the traditional or axiomatic account of scientific theories, a number of alternative accounts, and the historical evolution of the current spectrum of philosophical thinking on the problem. Symposium contributions are by Carl Hempel, Patrick Suppes, I B Cohen, Peter Achinstein, David Bohm, R L Causey, Jeffrey Bub, Bas C van Fraassen, Thomas Kuhn, Frederick Suppe, Dudley Shapere, Thomas Nickles, and Stephen Toulmin.

SUPPES, P (ed) and Hintikka, K J J (ed) and Moravcsik, J M E (ed). *Approaches To Natural Language*. Boston Reidel 1973.

The papers are arranged under three sub-titles, viz. Grammar, Semantics, and Special Topics. Part I on Grammar contains papers on stress, phonology, syntax, transformational grammars, and the like. Part II on Semantics contains, among other things, papers on the relations between grammar and logic, on quantification in ordinary English, on mass terms in English, and on belief sentences. Special topics treated in Part III are topicalization and self-reference. Some papers in parts II and III are followed by special comments. The volume contains 27 essays.

SUPPES, Patrick (ed) and Hintikka, Kaarlo Jaakko Juhani (ed). *Aspects Of Inductive Logic*. NY Humanities Pr 1967.

SUPPES, Patrick (ed) and Tarski, Alfred (ed) and Nagel, Ernest (ed). *Logic, Methodology And Philosophy Of Science: Proceedings Of The 1960 International Congress*. Stanford CA Stanford Univ Pr 1962.

This volume contains the 63 papers under the auspices of a division of the "International Union of History and Philosophy of Science." The work of the congress was divided into eleven sections: (1) Mathematical Logic; (2) Foundations of Mathematical Theories; (3) Philosophy of Logic and Mathematics; (4) General Problems of Methodology and Philosophy of Science; (5) Foundations of Probability and Induction; (6) Methodology and Philosophy of Physical Sciences; (7) Methodology and Philosophy of Biological and Psychological Sciences; (8) Methodology and Philosophy of Social Sciences; (9) Methodology and Philosophy of Linguistics; (10) Methodology and Philosophy of Historical Sciences; (11) History of Logic, Methodology, and Philosophy of Science.

SUPPES, Patrick Colonel (ed). *Space, Time And Geometry*. Boston Reidel 1973.

SUPPES, Patrick. *Axiomatic Set Theory*. Princeton NJ Van Nostrand 1960.

Although this substantial book is intended to serve mainly as a textbook there is much in it of interest to mathematicians, logicians and philosophers who would not have this use in mind. The Zermelo-Fraenkel system is developed (with some modifications

by the author) and many of the standard topics discussed: paradoxes, algebra of sets, relations, cardinal and ordinal numbers, denumerability, transfinite induction, and the axiom of choice. Some mathematical maturity—but no specific knowledge of Cantorian set theory or of symbolic logic—is presupposed. Numerous and detailed exercises are also included.

SUPPES, Patrick. The Philosophical Relevance Of Decision Theory. *J Phil* 58,605–613 O 61.

This paper sets out to show that decision theory has the kind of primary relevance for philosophy that we associate with quantum mechanics or the theory of sets. For instance, in the area of normative theory, Milnor's work in decision theory has shown that there is no simple coherent set of principles capable of precise statement that corresponds to naive ideas of rationality. Similarly, Arrow's impossibility theorem indicates that our naive intuitions about justice cannot be counted upon to yield a coherent and consistent theory.

SUZUKI, D T and Fromm, Erich and De Martino, Richard. *Zen Buddhism And Psychoanalysis*. NY Harper 1960.

Growing out of a workshop on Zen Buddhism and Psychoanalysis, sponsored by the Department of Psychoanalysis of the Medical School of the National University of Mexico in 1957, the book consists of three lectures which, according to Erich Fromm in the Foreword, "will be of particular value to psychiatrists and psychologists and to many other thoughtful people interested in the problem of man...." In the opening

essay, "Lectures on Zen Buddhism," D T Suzuki discusses Zen Buddhism with special reference to its treatment of psychological problems, such as the unconscious and the self. In the second lecture Erich Fromm undertakes to show how the concepts of Zen Buddhism are relevant to, suggestive for and clarificatory of the theory and technique of psychoanalysis. In the concluding lecture, Richard De Martino provides "a general consideration of Zen Buddhism in its relation to the human situation."

SWABEY, William Curtis (ed). *Ethical Theory: From Hobbes To Kant*. NY Philosophical Lib 1961.

What is the foundation of morals? Hobbes and Spinoza find it in nature (self-preservation) via reason; Locke, in natural laws prior to the state (vs. Hobbes) and sanctions by God; Cudworth, Clarke, and Wollaston; and later Balguy and Price, in the moral intuitions of reason into the nature of things; Shaftesbury and Hutcheson, in a moral sense (Butler stands between Clarke and Hutcheson); Hume and Adam Smith, in moral sentiments and approval; Bentham, in utility; Kant, in the universal moral law of reason. Naturalism wars with the transcendent view. For Hobbes and Spinoza "God" loses traditional meaning. Locke and the rationalists equivocally appeal to God. Shaftesbury, Hutcheson, Butler, Hume, and Smith base morals on human nature; they are emotivists. Bentham, seeking foundation in utility, defines the platform of a sect. Finally, Kant severs ethics from theology. His postulate of God is really a faith in the ethical tendencies of man.

SWANSON, J W. Linguistic Relativity And Translation. *Phil Phenomenol Res* 22,185–192 D 61.

The purpose here is to give different interpretations of the notion of linguistic relativity. Parallels are drawn between Whorf and Kant; knowledge is a joint

product of raw experience and language. Such experience is organized into meaningful patterns by metaphysical categories implicit in a given language. The main point is to defend the linguistic relativist's strong claim that certain items in one language are not translatable into some other language. Evidence is presented for this thesis, where information is lost or distorted as a result of translation.

SWANSON, J W. On The Kemeny–Oppenheim Treatment Of Reduction. *Phil Stud* 13,94–96 1962.

SWANSON, J W. The Singular Case Of The Null Individual In The Empty Domain. *J Phil* 63,772–775 D 66.

The author examines a recent proposal by R M Martin to assimilate the logic of quantification in the empty domain to general quantification theory by means of supplementing all domains with a so-called "null individual." On Martin's proposal, the null individual is not actually in the empty domain but merely a fictitious component in some sense. One of the welcome consequences of this strategy—so Martin claims—is to preserve truth of sentences of the form $(\exists x)(\forall x \sim Fx)$ in all domains. In reality, however, Martin's suggestion amounts ultimately to the old-fashioned proposal that all domains dealt with in quantification theory be regarded as non-empty. The so-called "null individual" turns out to be a full-fledged, if somewhat eccentric, member of any domain with which it is associated; and the proposal to regard any domain as containing at least the null individual turns out to be a picturesque way of stipulating non-emptiness for all domains.

SWEENEY, Leo (ed) and Daves, Vincent F (ed) and Holloway, Maurice R (ed). *Wisdom In Depth: Essays In Honor Of Henri Renard*. Milwaukee Bruce 1966.

SWEENEY, Leo. Idealis In The Terminology Of Thomas Aquinas. *Speculum* 33,497–507 O 58.

In his Thomas Lexicon, Ludwig Schutz mentions fifteen passages in which Thomas uses the word 'idealis'; but there are thirteen passages in Thomas's commentary on the 'Liber de Causis', of which Schutz lists only one. The article examines these thirteen passages. In these passages 'idealis' is derived from 'idea' in its Platonic sense, and refers to the condition of anything which belongs within the order of subsistent Forms. Thomas applies 'idealis' to 'omnis forma', 'forma intelligibilis', 'natura separata', and (at least six times) to First Intellect. This last application of 'idealis' is significant in that it leads Aquinas to raise Intellect to a higher level than did the Platonists: Thomas considered it a Form.

SWEENEY, Leo. "The Origin Of Participant And Of Participated Perfections" in *Wisdom In Depth*, L Sweeney And Others (eds), 235–265. Milwaukee Bruce 1966.

This chapter studies the positions taken by Proclus, influential upon medieval, renaissance and modern authors, on participation as a process, on the genesis of the perfection participated and of the participant. Conclusions: Proclus' *Elements of Theology* presents no doctrine of creation but a genuine cosmogony, where at least two sorts of causality are operative: a process of participation by which participants are completed and perfected through the participations they receive, and, secondly, a process by which the participations and participants themselves originate mysteriously, spontaneously and necessarily from their monads.

SWEENEY, Leo. Analogy And Being. *Mod Sch* 39,253–262 Mr 62.

This article defends analogy by inserting it within an inductive and authentically existential metaphysics. "Being" as "that which actually exists" is a genuine concept or intelligibility because it is an intelligible realization of what beings are precisely as being—whether those beings are material existents or the components discovered within them by inference or God as the Existent who efficiently, exemplarily and telically causes them.

SWEENEY, Leo and Ermatinger, Charles J. Divine Infinity According To Richard Fishacre. *Mod Sch* 35,191–212 Mr 58.

Influenced by the Paris condemnation of 1241, Richard Fishacre spoke of divine infinity while discussing the beatific vision in his "In I Sent," written just before 1245. The primary aspect of God's infinity is power, which is established by the "distantia" argument: a maker's power is as great as the distance between what is made and what it is made from; the distance between nothing and something is infinite, and God created matter from nothing. His power is infinite in that He is infinitely separated from what accounts for passivity and limitation—matter. Therefore, His infinite power is not merely an external attribute, but depends on His very being which, being completely free from matter and its limiting determination, is infinite. Conclusion: Fishacre may be the first to present infinity as a perfection of the being of God, a doctrine common after 1250.

SWEENEY, Leo. Another Interpretation Of *Enneads*, VI, 7, 32. *Mod Sch* 38,289–303 My 61.

This article begins by isolating what Plotinus intends when he describes the beloved as infinite in Chapter 32 of *Enneads* VI, 7, so that we may understand what he means by similarly characterizing love. Since the Good is the principle of absolutely everything, He is also the source of each soul, who seeks Him through the love He Himself has bestowed. He is, therefore, the cause of an infinite love since He Himself is infinite. But exactly how is the Good (God) infinite? Because of His rising above the intelligible and sensible universes. He thus is simultaneously implied to be infinite in His own unique reality. He is infinite, then, through His transcendence and nonentity. Accordingly, Plotinus' metaphysics is much different from Aquinas', in which both form and matter, act and potency, are real and genuine determinants. In

Plotinus, though, matter and potency are neither real nor actual determining factors. The two metaphysics, nevertheless, do have some similarity.

SWEENEY, Leo. Are *Apeiria* And *Aoristia* Synonyms? *Mod Sch* 33,270–279 My 56. Plotinus' uses of 'apeiria' and 'aoristia' are examined in order to shed light on the development of the Christian notion of infinity. Three series of Plotinus texts are examined, and then compared with texts from Proclus and Pseudo-Dionysius. It was found that either term can be used to express a condition of formlessness or non-entity, though 'apeiria' can also refer to infinite power. Conclusion: in all cases in which 'apeiria' is intended to convey formlessness and non-entity, it is synonymous with 'aoristia'.

SWEENEY, Leo. Divine Infinity: 1150–1250. *Mod Sch* 35,38–51 N 57.

Before 1150, Christian theologians hardly mentioned divine infinity; yet after 1250, almost all, including Bonaventure, Albert the Great, Henry of Ghent and Thomas Aquinas, held that God is infinite in His very being; so this doctrine may have originated between 1150 and 1250. Neither the author of "Ysagoge in Theologiam" nor Robert of Melun mentions divine infinity. Peter Lombard uses infinity by extrinsic denomination to express the power and wisdom of God and as synonymous with "eternal." By contrasting Plotinus with thirteenth-century theologians, one can determine whether a writer is using infinity in a post-1250 sense. For Plotinus form determines its recipient and is identical with being, so that infinity is identical with formlessness or non-being; for later writers matter and potency also are determining and limiting factors. Therefore, a being without matter or potency is both infinite and perfect.

SWEENEY, Leo. Existence/Essence In Thomas Aquinas' Early Writings. *Proc Cath Phil Ass* 37,97–131 1963.

SWEENEY, Leo. Existence: A Speculative Problem. *P7–14* 1966.

This article is a metaphysical consideration of "existence," especially as outlined by Milton K Munitz. Munitz asks "why is there a world," thus pointing to what he calls "the mystery of existence." Because the existence of the world is at least inexplicable and at most incomprehensible, one is led to a philosophical agnosticism, which eliminates God as the cause of the world's existence. Munitz's book, though he has arrived at an erroneous conclusion, is important insofar as it takes seriously metaphysical questions. These are answered not by any sort of phenomenology, but by what J Maritain calls authentic existentialism and in which primacy is given to existence as that by which something actually is.

SWEENEY, Leo. Existentialism Authentic And Unauthentic. *New Scholas* 40,36–61 Ja 66.

Existentialism (a philosophical position in which primacy is given to "existence") is authentic if "to exist" means "actually to be," but is unauthentic if it means "to be human." This challenges the interpretation of Heidegger, Marcel, and other philosophers of subjectivity. After contrasting subject/object with supposit/nature, the article considers subjectivity, solipsism and monism, especially with reference to Gabriel Marcel.

SWEENEY, Leo. Research Difficulties In The *Liber De Causis*. *Mod Sch* 36,109–116 Ja 59.

Three major obstacles face a reader of the *Liber*. First, the anonymous author is both near to and far from Proclus. He paraphrases or quotes from Proclus' "Elements of Theology," but then inserts his own qualifying phrases and clauses, or substitutes his own statements. Second, the author attempts too much in too little space. Robert Steele's edition contains all thirty-two propositions of the *Liber de Causis* in twenty-six pages; yet within that space a complex, four-tiered, hierarchic universe is unfolded along with relationships between levels and between items on the same level. Hence, one suspects that much relevant and necessary information on the author's other doctrines has been omitted. Third, there are many apparent and puzzling inconsistencies, most of which however, are reconcilable. An anticipation of these three obstacles should make research into the *Liber* an easier and less disconcerting task.

SWEENEY, Leo. The Mystery Of Existence. *Mod Sch* 44,57–73 N 66.

After first considering that the "amazing thing about the universe is that it exists," the author seeks to refute Milton K Munitz's position of "philosophical agnosticism"—namely, that the actual existence of the universe is inexplicable and unintelligible and, therefore, a reflection upon existence cannot rationally lead one back to God. Munitz's conclusion is based on a misconception by equating existence with activity. If, on the other hand, existence is an intrinsic perfection in which existents find themselves no longer as intramental but as actually being, then metaphysics can culminate in an affirmation of God's existence.

SWEET, Albert M. A Semantic Explication Of Metaphysical Analogy. *Phil Phenomenol Res* 23,595–604 Je 63.

SWEET, Albert M and Chiaroviglio, Lucio. The Pragmatics Of Truth Functions. *Notre Dame J Form Log* 5,191–198 1964.

SWEET, Albert M. Toward A Pragmatic Explication Of Epistemic Modalities. *Notre Dame J Form Log* 4,145–150 1963.

SWEET, Paul M. *The Theory Of Capitalist Development: Principles Of Marxian Political Economy*. NY Oxford Univ Pr 1942.

The book falls into four parts. Part I expounds leading topics such as use-value and exchange value, abstract and concrete labor and surplus value and profit, and brings them into relation with the thought of non-Marxian economists and schools, past and contemporary. The second part, dealing with capitalist accumulation, considers the problem of applying the law of value to labor power, as a commodity. In the last part, Sweezy discusses such topics as fascist economics and the prospects of liberal reform and examines the problems entailed by the possible emergence of new socialist states in Europe in the midst of declining world capitalism.

- SWIGART JR, John W** and Stewart, John P. Another Look At Fact, Fiction, And Forecast. *Phil Stud* 10,81-88 1959.
The article seeks to correct some major misunderstandings of Goodman's important book on induction, notably those published by Professor A Pap. A brief, technical exposition is given of the sections on dispositional terms and possible events, with lengthier examination of the problems of criteria for projectible, lawlike hypotheses and their relation to paradoxes such as "grue" and "bleen"—all without commitment to a platonic ontology. Additional insights are thus provided into Goodman's program for confirmation theory and the other areas above, as well as the general problem of counterfactual conditionals.
- SWIGART JR, John W.** On Sameness Of Meaning. *Phil Stud* 9,38-41 1958.
Professor N Goodman has provided a new approach to the traditional problem of synonymy in natural language. I re-examine his efforts, certain criticisms of them, and then strengthen his requirement for sameness of meaning along strictly nominalistic lines. The following condition is added to his criterion: for any two expression-events to have the same meaning, it must also be the case that all their replica occurrences with identical primary extensions have the same secondary extensions in all the compounds whose additions themselves have identical primary extensions. Advantages gained include adequate treatment of terms similar in meaning and of ambiguous words.
- SWIGART, John.** Carnap's Ontology And Challenges. *Phil Sci* 30,71-80 Ja 63.
In various articles Professor R Carnap examines the relationships between ontological commitments and linguistic analysis. I want to appraise his own position and respond to his challenges concerning an extensionalistic, instead of an intensionalistic (such as his), method of analysis. Critical objections to the latter are developed for both formalized languages and natural language. Drawing upon certain studies of R M Martin and N Goodman, plus some previous work of my own, I then show that the vaguenesses and confusions of excessive ontological commitments accompanying intensionalism can be avoided by extensionalistic approaches in which integral concepts can be well defined.
- SWENSON, David F.** *Something About Kierkegaard.* Minneapolis Augsburg 1948.
Swenson believes that Kierkegaard excelled the classical philosophers by facing clearly up to the psychology of ideas. He mapped out the life of the inner spirit and in this and in other ways he was like the unsystematic and the provocative Socrates. He was a hot polemicist, individualist, dialectician and a kind of psychoanalyst; he was an anti-intellectualist and prose-poet. In this volume there is a clear historical delineation of the man's life and his prolific publications.

- SWITALSKI, Bruno.** *Neo-platonism And The Ethics Of St Augustine, Vol I: Plotinus And The Ethics Of St Augustine.* Chicago NY 1946.
The author's goal is to prove that the influence of Plotinus upon St Augustine was notable also in the field of ethical doctrine. He bases his conclusion both on a general comparison of their teachings and on an analysis of specific passages.
- SWYHART, Barbara Ann DeMartino.** *Bioethical Decision-Making: Releasing Religion From The Spiritual.* Philadelphia Fortress Pr 1975.
While this book is classified under ethics, its main thrust may be religious. The framework for moral decision-making is definitely religious—but religion is pushed in the direction of non-denominational pluralism. "Spiritual" considerations are excluded. Among the five listed purposes of the book one is to offer "a clearing ground for pluralistic forms of religious ethics." Chapter 2 presents five aspects of value-seeking: memory, forgetfulness, imagination, importance and transcendence.

- TAKAKUSU, Junjiro.** *The Essentials Of Buddhist Philosophy,* W T Chan And Charles A Moore (eds). Honolulu Univ Of Hawaii 1947.
The author presents the essentials of Buddhist philosophy. The different schools of thought formerly or still existing in Japan are systemized on the theory that these schools have preserved and fairly represent all of the doctrines of both Hinayana and Mahayana Buddhism. There is a brief introduction and historical note tracing the Indian background of Buddhism. Six fundamental principles of Mahayana philosophy are presented. Eleven Japanese Buddhist schools of thought are then discussed. These brief expositions include remarks as to historical derivation and the essential elements of the philosophy involved.

- TAMURA, Kwansei.** Some Developments Of The Buddhist Approach To Reality. *Int Phil Quart* 4,562-580 D 64.
The concept of reality is studied throughout the main schools of Buddhism after Buddha himself. In early Buddhism, this phenomenal world is characterized by impermanence and insubstantiality, summed up in the law of Dependent Origination. Authentic reality is what lies "beyond" or "behind" this phenomenal world, understood by negation of the above characteristics. Some later schools moved in the direction of a pluralistic realism, playing down the insubstantiality of all things, especially in the case of the soul, and dividing the world into various combinations of basic elements. A movement to restore the purity of primitive Buddhism with its stress on impermanence and insubstantiality ensued, called in general Mahayana Buddhism. Authentic reality was described in terms of voidness, which does not of course mean total nothingness, though it is indescribable in any conceptual way; spiritual identification with reality in its true state is Nirvana or Buddhahood.
- TANCHER, V K.** A New Phase In The Development Of Scientific Atheism. *Soviet Stud Phil* 3,43-51 Fall 64.
- TANNENBAUM, Frabk.** *A Philosophy Of Labor.* NY Knopf 1951.
This volume is described as "a pioneer work on the position of the labor union in modern society, offering the challenging concept of it as the greatest conservative force of our time." "The union," asserts the author, "is the spontaneous grouping of individual workers thrown together functionally. It reflects the moral identity and psychological unity men always discover when working together."
- TANNENBAUM, Perry H** and Osgood, Charles E and Suci, George J. *The Measurement Of Meaning.* Urbana U1957.
Two interrelated theories of meaning are defended in this volume. The first proposes that a term, S, means T to a human being, H, if some of the responses H had made to an object or property, T, are elicited from H by the term S. To account for the acquired powers of S to elicit responses, the authors argue that H had frequently co-experienced S and T. The second theory is based upon the following three assumptions: a) Suitable pairs of contrary terms may be considered ends of a meaning dimension; b) Sets of meaning dimensions can serve as axes of a meaning

- space or semantic space, upon which a distance function can be defined and in which an origin can be determined; c) by asking a subject, H, to associate a term S with those employed in defining a semantic space, L, psychologists can locate the place of S for H in L. To relate the first theory to the second, the authors reason that the direction of S in L will correspond to the reactions elicited by S; its distance from the origin, to the intensity of the elicited responses.

- TASCHDJIAN, Edgar.** Nonlinear Logic And Life Quality, Systems Thinking And The Quality Of Life. *Soc Gen Syst Res* 45-49 1975.
- Qualities can be measured only in ordinal not in cardinal numbers, and degrees of quality are non-additive. A curve relating intensities of qualitative input with corresponding outputs is non-monotonic and nonlinear. Reasoning about qualities always involves whole-part relations which are not logical, but dialectical. A suitable calculus can be developed on the basis of the information content of the quality which increases with the latter's rarity and improbability.
- TASCHDJIAN, Edgar.** Time Horizon: The Moving Boundary. *Behavioral Science* 22,41-48 1977.
- The specification of a time horizon for a prediction which is intended to validate an explanatory theory is a necessary requirement for its scientific acceptability. Without it, such predictions are prophecies or oracles. The qualification of a prediction as "short range" or "long range" is not sufficient to determine its time horizon. A horizon is a boundary which moves back as we move toward it and a time horizon is a boundary which separates the foreseeable from the unforeseeable future. The problem of moving boundaries is examined in this paper in physicochemical, biological, managerial, socioeconomic and cybernetic systems. It is found that the entropy or uncertainty of transition across the time horizon has a paraboloid distribution and that the diachronic and metamorphic evolution of such systems shows a nonlinear distribution.

- TATARKIEWICZ, Wladyslaw.** Happiness And Time. *Phil Phenomenol Res* 27,1-10 S 66.
- Happiness is an ambiguous word. In this paper it is used in the sense of satisfaction of one's life as a whole. At least some people at some moments of their lives are happy in this sense: this forms a sufficient basis for an examination of the matter. Happiness includes not only an agreeable present but a satisfactory recollection of the past and the expectation of a satisfactory future. For a being who remembers the past and is concerned with the future, things have a bearing which are no longer or not yet in existence. The direct experience of good and evil makes only a fragment, and by no means the most important one of Happiness and unhappiness. The three elements of Happiness, the present, the past and the future are not coequal. Present events play a comparatively minor role, especially if the present has to mean a single moment and not the period which surrounds the moment actually being experienced. Satisfactory past is not indispensable for satisfactory recollection, thanks to the "optimistic tendency of memory." But the future weighs heavily upon our consciousness. Therefore the expectation of good or evil has greater significance for Happiness than its recollection or even experience.

- TATARKIEWICZ, Wladyslaw.** Nomological And Typological Sciences. *J Phil* 57,234-240 Mr 60.
- The author argues for a classification of material (real) sciences into two kinds: nomological and typological. The nomological sciences investigate what in a given field is common to all phenomena. The typological sciences, such as history, geography, and botany, investigate the various forms in which the phenomena occur in these fields.
- TATARKIEWICZ, Wladyslaw.** Objectivity And Subjectivity In The History Of Aesthetics. *Phil Phenomenol Res* 24,157-173 D 63.
- The thesis here is that the objective theory in aesthetics is predominant in the ancient and medieval period, whereas the subjective theory is predominant in modern times. The purpose is to trace the development of the history of aesthetics to the moment when the subjectivistic view was victorious and to show how early it appeared and how late it gained ascendancy. The problem of aesthetics, hence, changed so that now one asks not what is beautiful or what is beauty, but how does one experience it.

- The article is intended to clarify the term 'philosophy of education', through the examination of defining and accompanying characteristics. Special ways of knowing (introspection, intuition, etc) are not defining. Traditional metaphysics and epistemology have accompanied instances of philosophy of education but are not defining, since they have no demonstrated import. Axiology cannot be so dismissed. Critical analysis has accompanied instances of educational philosophizing and has proved to be the major thrust and most enduring aspect of this activity. Philosophy of education is seen to be such a process, rather than a body of completed knowledge.

TAYLOR, John F A. *The Masks Of Society: An Inquiry Into The Covenants Of Civilization*. NY 1966.

An attempt to explore the basic problems of social philosophy by examining the actions of men which lay the foundations of consent on which communities are established. The author's guiding principle is the belief that covenants operate beneath all forms of institutions and social conduct. Covenants are obligatory in consent and provide the basis for the diverse versions of human rights, duties, and approved interpersonal relations. The basic question which this book seeks to answer is: What are the conditions essential to the dignity of persons in any form of human community? The task of answering this question belongs to *juristic* philosophy. The main areas of covenant treated here are those of law, economy, science and art. In the second part of the book the author offers programmatic suggestions for a reconstruction of the human covenant in the domains of private and public enterprise, the frontier of education, morals and politics.

TAYLOR, Overton H. *The Classical Liberalism, Marxism And The Twentieth Century*. Cambridge Harvard Univ Pr 1960.

The author believes that the twentieth century clash between the two opposed philosophies occurs in an environment to which neither is perfectly adapted or relevant. The first lecture sketches the development of classical Liberalism; the second expounds the essentials of Marxist doctrine. In the third the author describes the changes that have been wrought in Marxism to make it into present-day Communism. In the last lecture he argues that Liberalism needs modernization and tentatively suggests possible lines along which revision might be made.

TAYLOR, Overton H. Liberal Education And Liberalism. *Ethics* 55,88-109 Ja 45.

TAYLOR, Paul W. *Normative Discourse*. Englewood Cliffs NJ Prentice-Hall 1961.

This book is an examination of the nature of value judgments and of their justification. The study is not limited to moral judgments, and it includes an analysis of the meaning of prescriptive ("ought") utterances as well as evaluative statements. Four stages of justification (common to both prescriptives and evaluatives) are distinguished: (1) verification by reference to standards and rules; (2) validation of standards and rules themselves; (3) vindication of an ordered system of standards and rules; and (4) rational choice among whole ways of life, where rational choice is conceived as an ultimate normative commitment made under ideal conditions of enlightenment, impartiality, and freedom. An argument against ethical relativism is presented, as well as an explanation of why the naturalistic fallacy is a fallacy.

TAYLOR, Paul W. The Ethnocentric Fallacy. *Monist* 47,563-584 Sum 63.

Taylor discusses Kurt Baier's book *The Moral Point of View* and claims Baier commits an error—the ethnocentric fallacy—by defining the moral point of view in terms of the moral code of western society without saying how we know this point of view is the true criterion for moral convictions. Baier's ethnocentrism undercuts the meaning of "true" and "false" and thus destroys the very concept of moral knowledge which Baier's argument was meant to clarify and justify. Taylor offers an alternative way to account for the differences pointed out by Baier between moral convictions and beliefs about law and custom.

TAYLOR, Richard W (ed). *Life, Language, Law: Essays In Honor Of Arthur F Bentley*. Yellow Springs OH Antioch Pr 1957.

TAYLOR, Richard. *Action And Purpose*. Englewood Cliffs NJ Prentice-Hall 1966.

Taylor sets about an analysis of the notions of causation, human action, purpose, and a whole host of other conceptions such as deliberation, willing, mental acts, and reasons that relate to these key concepts in the philosophy of human action. The issue is, of course, what sort of explanation is suited to grasping the inherent intelligibility of human action.

TAYLOR, Richard. *Freedom, Anarchy, And The Law: An Introduction To Political Philosophy*. Englewood Cliffs NJ Prentice-Hall 1973.

TAYLOR, Richard. *Good And Evil: A New Direction*. NY Macmillan 1970.

Taylor argues that good and evil are a function of human feelings, needs, desires and purposes, rather than of reason of intellect. In Part I, Taylor examines and rejects the dominant rationalistic tradition in ethics. He argues that all rationalists, including Socrates and Kant, error when they assert that the good really exists. Part II begins with Taylor arguing that man is basically goal directed and that the greatest good for an individual is the total satisfaction of his needs. The common good for men is defined as "the maximum satisfaction of their felt desires, whatever these may be, at the least cost—that is, with the minimum frustration of precisely the same aims and desires." In Part III Taylor contends that man is motivated by four motives, which are self love, self-hatred, compassion, and malice.

TAYLOR, Richard. *Metaphysics*. Englewood Cliffs NJ Prentice-Hall 1963.

R Taylor has written the fifth in a series "Foundations of Philosophy." From each of 13 areas a specialist is invited to speak in simple style to those approaching the study of philosophy. The problems Taylor discusses are those of mind and body, freedom and determinism, fate, time and becoming, God. These are topics on which men have opinions and the philosophic task is to clarify arguments that settle, if possible, the issue of what is known. The author's approach uses the moves of analysis not to disparage the meaningfulness of metaphysical propositions, but to show their significance for other beliefs.

Teichmann considers two objections to the claim that there are such things as propositions, the objection that the notion is superfluous, and that it is obscure. She devotes most of her discussion to the latter objection, especially to the claim that no satisfactory criterion of identity has been given for propositions. She considers several analyses of propositions, and shows how criteria, though perhaps not necessary and sufficient conditions, can be worked out for propositions.
- TEITELBAUM, Harry A.** Rhythmic Activity Of The Nervous System. *Phil Sci* 20,42-58 Ja 53.
- TEJERA, Victorino.** *Art And Human Intelligence.* NY 1965.
Tejera aims to show that "the contempt in which aesthetics has been held is quite unwarranted." His thesis is that man is basically a creative animal and that the process of creativity binds together all human activities, including art, technology, science, and conduct. The author scrutinizes Aristotle's theory of mimesis and concludes that it doesn't mean "imitations" but "expressive making." His own explication of expression in art is based primarily upon Dewey's *Art as Experience*, with experience defined as a creative and social process which functions as discovery. The book contains chapters on the influence of psychoanalysis, Gestaltism, and Existentialism in art.

In *Reason and Conduct* Henry David Aiken maintains that there is an antimony of moral objectivity and freedom. Freedom requires that we each choose our own moral principles while objectivity requires that there be universally binding principles. He resolves the antimony by proposing a principle of objectivity consistent with a diversity of moral codes, thus forsaking universalizability in ethics. However, his notion of freedom is too stringent and his objectivity inadequate in not encompassing universalizability. Still, Aiken's concept of objectivity is important in pointing to the defeasibility of all our moral positions.

- THALBERG, I.** False Pleasures. *J Phil* 59,65-73 F 62.
If a man asserts, "I'm pleased," can we ever impute an error to him? Following the suggestions of Plato in the *Philebus*, this paper argues that there are situations in which it makes sense to say something rather uncommon: "You were delighted, but mistakenly." After Plato's view of false pleasures is explained and the more obvious objections to it answered, the paper argues that his strange doctrine illuminates the neglected propositional aspect of the moods we characterize as "enjoyment," "amusement," or "pleasure."
- THALBERG, I.** Looks, Impressions And Incorrigibility. *Phil Phenomenol Res* 25,365-374 Mr 65.
Phenomenalistic theories of perception entice us because they inoculate one class of statements, namely those describing current appearances and sense-data, against doubt. Consequently it will weaken the spell of phenomenalism if we can explain why appearance and sense-datum statements are not really immune to challenge and correction. In the course of the argument, crucial distinctions are suggested between various types of appearance-statements, and statements concerning sense-data and impressions. Finally, it is asked whether the possibility that a man should be mistaken or ignorant about the way things look to him requires us to distinguish between the "apparent" and the "real" looks of things.
- THALBERG, I.** Natural Expressions Of Emotion. *Phil Phenomenol Res* 22,387-392 Mr 62.
- THALBERG, Irving** and Gale, Richard M. The Generality Of Predictions. *J Phil* 62,195-210 Ap 65.
The contention of this paper is that any statement whose logical subject refers to a future individual, i.e., one that does not yet exist, must be general, while statements whose logical subjects refer to a past individual, i.e., one that no longer exists, may be singular. The reason for this asymmetry between prediction and retrodiction is that future individuals, unlike bygone things, cannot now be identified. There are two relevant senses in which individuals are identified: (1) by means of a demonstrative, and (2) by the use of a proper name. Future individuals are not identifiable in either sense, but past individuals may be singled out in sense (2). Why not name future

individuals now? This suggestion misses the important difference between giving a name to an individual and making up a name for an individual. Future individuals may be referred to by the use of definite descriptions, but this is not identifying. A woman may describe her assailant but be unable to identify him.

THALBERG, Irving. Freedom Of Action And Freedom Of Will. *J Phil* 61,405-414 JI 64. If we say, "He can perform his duties, but is he able to make up his mind that he will perform them?" or He acted according to his own decision, but did he decide freely?", we imply that, besides liberty of action, there is something analogous which belongs to the will. Indeed, some philosophers attack determinism because it seems to exclude freedom at the deliberative stage. Yet could there be any volitional counterparts for our powers, capacities, opportunities and rights of doing things? Could anyone be deprived of the means, or the authority, to make up his mind? Again, do we find parallels between voluntary deeds and certain types of decision? To contend that someone acted freely—or intentionally, willingly, and so forth—is, *inter alia*, to rule out mishaps like ignorance, mistake, inattention, accident, duress and overwhelming emotion.

THALHEIMER, Alvin. *Existential Metaphysics*. NY Philosophical Lib 1960.

"The program of this treatise will be to: (1) point out the meaning our term 'existence' has; (2) to identify various entities whose existence or nonexistence customarily concerns philosophers... (3) then to determine whether or not these entities exist in our sense of 'existence'." For the author existence is represented adequately by singular existential propositions and ten universal negative propositions. An example of the latter: "No entity is real which is presented as generally discredited." The book consists of twenty-five chapters in various stages of completeness, the last eight being simply titles followed by the author's tentative remarks as to how he would treat the problems mentioned.

THAYER, H S. *Meaning And Action: A Critical History Of Pragmatism*. Indianapolis Bobbs-Merrill 1968.

The thesis of the work is that pragmatism is a theory of meaning and action; it is the "most ambitious and important effort in our time" "to develop in one inclusive framework a reliable interpretation of scientific knowledge and ethical judgment." The author sees pragmatism's effort to accomplish a critical synthesis of natural knowledge and moral values as resulting in "a theory of knowledge as valuation." The book is divided into two parts: the first a study of American pragmatism with chapters on Charles Sanders Peirce, William James, John Dewey, C I Lewis, and George Herbert Mead; the second, entitled "Speculations," with chapters on "The Meaning of Pragmatism," "Pragmatism and American Life," and a "Conclusion."

THIÊN-ÂN, Thich. *Zen Philosophy, Zen Practice*. Emeryville CA Dharma 1975.

The author attempts first to lead the reader to an understanding of the historical development of Zen Buddhism. He then presents theory and technique of Zen, systematically from chapter to chapter, in a way that can be easily comprehended by the beginner. The photographs illustrate some of the practices in a California setting. There are two appendices: one dealing with the soul problem and the other containing a Zazen poem. The book concludes with a glossary.

THODY, Philip. *Albert Camus: A Study Of His Work*. NY Macmillan 1957.

THOMAS JR, Sid B. Is The Appeal To Ordinary Usage Ever Relevant In Philosophical Argument? *Monist* 48,533-546 O 64.

This article attempts to show that certain appeals to the way terms are used in ordinary discourse, when those appeals occur in the course of a philosophical argument, involve their user in a kind of paradox. This paradox consists in the fact that the appeals themselves involve the use of key terms in a non-ordinary way, and which, if their appeal is justified, is unjustified. This point is illustrated by detailed

examination of two of Wittgenstein's remarks concerning our knowledge of another's pain, and, Norman Malcolm's discussion of the question, "Can I discover in myself whether I know something or merely believe it?" At the end, an analysis is given of why appeals to ordinary language of the sort discussed cannot escape this paradox and why they therefore must be ineffectual as criticisms of philosophical positions.

THOMAS JR, Sid B. Morality As Institutionalized Benevolence. *Ethics* 74,269-280 JI 64.

A type of emotivism is used here in order to reconcile the fact that a real difference exists between right and wrong with the fact that rightness and wrongness are not objective properties of acts, although moral distinctions may become institutionalized in such a way that disagreement about them is syntactically possible. Language comes to include "feeling predicates," the logic of which implies that no act can be both right and wrong—in spite of the subjectivity of feeling. Only one emotion, benevolence, is capable of being objectified into such a system of evaluation of acts affecting others' interests.

THOMAS, D A Lloyd. Some Remarks On The Use Of The Word 'Moral'. *J Phil* 59,281-292 My 62.

This paper discusses some uses of the word 'moral' and considers some problems that arise out of an investigation of those uses. The principal problem considered is whether a moral philosopher who says "x is a moral issue" is making a remark that is neutral with respect to moral argument or whether he thereby commits himself to some moral position. Analysis of the sentence "x is a moral issue" entails that a moral philosopher is committing himself to a moral position when he uses that sentence but that the position is not one that anyone would want to challenge.

THOMAS, E J. *History Of Buddhist Thought*. NY Barnes & Noble 1951.

THOMAS, George F. *Christian Ethics And Moral Philosophy*. NY Scribner's 1955.

Professor Thomas interprets Christian ethics, not as a comprehensive legalistic code, but as an attempt to set forth as morally fundamental the principles of love of God and of neighbor. After sketching the background of Hebrew tradition, he discusses more fully the teachings of the gospels and of St Paul, together with the contributions of Augustine, Aquinas, Luther, Calvin, Wesley, and such contemporary figures as Niebuhr and Brunner. The moral theories of the hedonists, Kant, Hartmann and Perry are analyzed briefly, and the author advances the thesis that Christians may learn much from such moral philosophers but must "transform" their insights in the light of Christian faith and love.

THOMAS, George F. *Philosophy And Religious Belief*. NY Scribner 1970.

This book is a constructive answer to the crisis of belief. Clarifying and evaluating Western theism's religious beliefs in light of experience's whole range and rational argument, the book rejects an analytic approach, eschews metaphysical system, has dialogue with other positions, deals with metaphysical questions, and offers the following views: religion is a unique intuitive experience validated by experience and reason; the ontological argument for God, not valid as proof of God's existence, specifies God's nature; the cosmological argument does not show God is perfect; the teleological argument, relying on nature's whole order, is more reasonable than naturalism's explanation; the moral argument is valid; naturalism mistakenly stresses contingent things, efficient causes, and impersonal, valueless nature; God is spiritual, personal Being; natural evils, not "directly willed" by omnipotent God, are "incidental effects" of regular natural order; pursuing spiritual values, thinking, and religion, man is spiritual activity transcending nature; man's freedom is inherent in his moral and creative life.

THOMAS, George F. The Relation Of Philosophy And Religion. *Phil Rev* 55,564-571 S 46.

THOMAS, George. Abilities And Physiology. *J Phil* 61,321-327 My 64.

Arnold S Kaufman argues for the following analysis of ability statements: "A is able to x" means "A is in the appropriate physiological state, P, such that, given opportunity, P causes A to succeed in x'ing an appropriate number of times (as determined by the relative complexity of P), if he tries to x." Thomas discusses and criticizes Kaufman's reasoning in the above.

THOMAS, James D. *Facts And Faith, VI: Reason, Science And Faith.* Abilene TX Biblical Res Pr 1966.

THOMAS, John Heywood. *Paul Tillich: An Appraisal.* Philadelphia Westminster Pr 1963.

The author gives a brief summary of the main currents of Tillich's theological thinking. At the end he raises the question exactly why Tillich is important. It is partly that he has grappled with the fundamental anxiety of modern man in its characteristic form, the sense of the meaninglessness of life, but while modern in his mood his intellectual standpoint is more that of the nineteenth century. It is rather his readiness to do justice to psychology and all forms of culture that J H Thomas most admires.

THOMAS, Sid. Professor Sellars On Meaning And Aboutness. *Phil Stud* 13,68-74 1962.

Professor Sellars has written a paper in which he holds that the statement (1) "Karl's mind believes it is raining" is logically equivalent to a statement of the form (2) "Karl's body is in state 'p.'". In Thomas' analysis of these two statements he argues that the plausibility of this position depends upon whether the facts expressed by (1) and (2) possess the same sort of "intentionality" and "aboutness." He offers various formulations of these statements which he argues show that what is expressed in (1) is *intentional* and has *aboutness*, but is not just a fact about Karl's body. Thus, (1) and (2) do not possess the same sort of "intentionality" or "aboutness."

THOMAS, Stephen N. *The Formal Mechanics Of Mind.* Ithaca NY Cornell Univ Pr 1976.

This treatise provides a general account of the nature of psychological states, subjects' knowledge that they are in such states, and these states' relationship to physical events and processes in organisms' nervous systems. This theory's explanation of the difference between the mental and the nonmental ("physical") states of an organism enables it to be understood how a neural network having the known properties of the human nervous system could have "mental" states, including states of conscious experience. The theory also is shown to explain various hitherto puzzling psychological experiments and observations, and to entail surprising empirical psychological predictions, some reportedly verified already by laboratory tests.

THOMASON, Richmond H and Stalnaker, Robert C. A Semantic Theory Of Adverbs. *Linguistic Inquiry* 4,195-200 1973.

We semantically represent an adverb such as 'slowly' in 'John walks slowly' as a function taking propositional functions into propositional functions, where a propositional function (the semantic representation of a predicate) is a function taking possible worlds into sets of individuals. We give a model theoretic interpretation along these lines of an extension of first order logic including such adverbs, as well as an abstraction operator for forming complex predicates, and

discuss how this logic can be used in formalizing English so as to account for valid inference patterns that involve adverbs. Also, we formulate criteria for distinguishing sentence and predicate adverbs in English.

THOMPSON, Josiah. *Kierkegaard.* NY Knopf 1973.

THOMPSON, Josiah. *The Lonely Labyrinth: Kierkegaard's Pseudonymous Works.* Carbondale S Illinois Univ Pr 1967.

The early pseudonymous works must be regarded as progressive explorations by Kierkegaard of various aspects of his own sickness and imaginative attempts at finding a cure, a way out of the "labyrinth" which consciousness creates but cannot escape by itself. The author studies the genesis of Kierkegaard's project in his journal entries prior to the publication of his pseudonymous work, analyzes this work in terms of content and biographical significance. Unable except in fleeting moments of spontaneous joy to recover the "circle" of wholeness symbolized by childhood and by marriage, Kierkegaard suffers from the "discontinuity" consciousness introduces into every experience and which persist especially in efforts to escape it. Aware of the insufficiency of "infinite resignation" to his own condition, he explores the outlines of a faith realized only in the paradox of a divine "thunderstorm" breaking down the walls of thought and, by creating a "second immediacy," curing the sickness of consciousness.

THOMPSON, Samuel M. *A Modern Philosophy Of Religion.* Chicago Regnery 1955.

The author's aim is "not to explore various philosophies of religion, or to provide a guidebook to the maze of religious thought, but to lead the reader through the development of a positive argument." He presents a philosophy of religion at considerable length in the form of a case for "realistic theism" as providing a

philosophical context for a sympathetic discussion of many of the doctrines of Western religion. Alternative philosophical points of view are discussed only insofar as they provide either a support for, or disagreement with, the author's own brand of theism. Each chapter is provided with notes, bibliography, and questions and topics for study.

THOMPSON, Samuel M. Impersonal Law And Personal Freedom. *Ethics* 73,157-166 Ap 63.

The rule of law in our society is responsible for preserving personal freedoms in spite of a regulated economy. Thinking about law, historically, has moved from personal or authoritarian law to natural law to a theory of consent or contract. Contract depersonalizes human relations, in being regulated by impersonal agencies, opening the way for government regulation. But this regulation is only of those areas of life which are impersonal and leaves people free with regard to the ends of life. One danger to freedom in a controlled economy is the growth of administrative law.

THOMPSON, Samuel M. Religion, Nature, And The Autonomy Of Law. *Ethics* 73,1-9 O 62.

THOMPSON, Samuel M. Syllogistic Logic In Linear Notation. *Phil Sci* 9,362-366 O 42.

THOMPSON, Samuel M. The Authority Of Law. *Ethics* 75,16-24 O 64.

This essay presents several theses concerning the relation between law and morality. It interprets the authority of law as situational, not normative. The authority of law is distinguished from the criterion of legislation. This authority "transcends force and brings force into submission to itself." The relationship between law and morality is described as a moral one and the authority of law is claimed to be deeper than positivist theories would allow.

The Thomsons criticize Searle's argument in "How to Derive 'Ought' from 'Is'" (*Philosophical Review* Volume LXXIII (1964), Pages 43-58), on the grounds that the *ceteris paribus* clause he requires for his argument will have to sneak in evaluative premises if he wants (4), "Jones is under an obligation to pay Smith five dollars," to entail (5), "Jones ought to pay Smith five dollars."

THOMSON, Judith Jarvis. Grue. *J Phil* 63,289-309 My 66.

The article discusses Goodman's puzzle (which appears in *Fact, Fiction, and Forecast*) and attempts to answer one question raised by it. Without trying to prove that a certain principle about reasons is correct the article attempts to show that if the principle is acceptable, then we can explain the preferability of 'green' over 'grue' for certain subject-classes.

THOMSON, Judith Jarvis. More Grue. *J Phil* 63,528-533 S 66.

Thomson defends her paper "Grue" from Professor Gordon's comments on it which seem to her irrelevant. For example, Gordon writes that she seeks "a definition of projectibility in terms of the notoriously obscure notion of observability" and attributes to her the view that "Green" is an observation-predicate while 'grue' is not... because we can tell whether a thing is green but not whether it is grue by simply looking at it in a good light." He says further that she gives no ground for saying 'grue' is not an observation-predicate. But Thomson was not trying to define "projectibility" at all, and so in particular was not trying to define it in terms of 'observability' or 'observation-predicate' which terms do not even appear in her paper.

THOMSON, Judith Jarvis. Private Languages. *Amer Phil Quart* 1,20-31 Ja 64.

THORSON, T L. *The Logic Of Democracy.* NY 1962.

Here a significant question is faced: Is there a rational justification of democracy? Both the absolutistic, natural-law approach to this question, the method of induction, and the relativistic, positivistic approach, are rejected. Analysis of the primary political context—men in groups confronted by the need to make decisions of allocating values and by the necessity of uncertain predictions concerning facts and values—shows that the rightness of decisions cannot be proved. But "the general recommendation that serves as the foundation of political philosophy" is: "Do not block the possibility of change with respect to social goods." This principle is absolutely justified unless it can be proved (and it cannot) that some state of affairs is absolutely right. The principle implies popular sovereignty, political equality, individual political rights, majority rule, and free expression as an absolute. In short, democracy can be rationally justified, in the sense that "rational" means assent to the rule, "Do not block the way of inquiry."

THORSON, Thomas Landon. Albert Camus And The Rights Of Man. *Ethics* 74,281-291 Jl 64.

Certain aspects of Albert Camus's thought are important to political philosophy. Political philosophy should not be so narrowly defined as to exclude a philosopher like Camus, whose work has strongly aesthetic and existentialist orientations. Camus's ideas of the absurd and revolt have important implications for the issue of the power of states and rights of individuals against the state.

TILGHMAN, Benjamin R (ed). *Language And Aesthetics: Contributions To The Philosophy Of Art.* Lawrence Univ Pr Of Kansas 1973.

The book is made up of an introduction plus nine essays. The essay which is likely to attract the most attention is the lead paper on "Wittgenstein's Aesthetics" by Morris Weitz. This is not simply a rehash by Weitz of his earlier "The Role of Theory in Aesthetics"; the new essay clarifies many of the issues of the old one, but also goes beyond it in interesting ways.

TILGHMAN, Benjamin R And Others. Problems And Perplexities. *Rev Metaph* 16,380-391 D 62.

TILICH, Paul J. *Morality And Beyond.* NY Harper & Row 1963.

TILICH, Paul Johannes. *Dynamics Of Faith.* NY Harper 1957.

Faith is defined as "the state of being ultimately concerned." It is not an act of knowledge, willing or feeling, but "a centered act of the whole personality." It must be expressed in symbols and myths "because symbolic language alone is able to express the ultimate." The truth of faith "cannot be judged by any other kind of truth, whether scientific, historical or philosophical." It must be judged by "whether or not it is alive" ("creates reply, action, communication") and whether "it expresses the ultimate which is really ultimate." The author maintains that "no one is completely without an ultimate concern" and that "the radical self-criticism of Christianity makes it most capable of universality."

TILICH, Paul Johannes. *My Search For Absolutes.* NY Simon & Schuster 1967.

TILICH, Paul. *Biblical Religion And The Search For Ultimate Reality.* Chicago Univ Of Chicago Pr 1955.

This book is "a slightly extended version of the James W Richard Lectures... delivered at the University of Virginia in the fall of 1951." It attempts to show that there is no necessary conflict between philosophy as ontology and biblical religion. On the contrary, the biblical symbols presuppose ontological questions, while their theological answers necessarily employ ontological categories. In fact, biblical religion is, in many respects, the counterpart of philosophy's search for ultimate reality or "being-itself."

TILICH, Paul. *Christianity And The Encounter Of The World Religions.* NY Columbia Univ Pr 1963.

Professor Tillich gives one Protestant view of the present situation in religion and quasi-religion, Christian principles of judging non-Christian religions, a Christian-Buddhist conversation and Christianity judging itself. Tillich here defines religion as "the state of being grasped by an ultimate concern." Religion usually defines the ultimate concern as gods, god, or a highest principle. He defines a quasi-religion as one which has genuine similarity with religion; it should not be confused with pseudo-religion.

TILICH, Paul. *Love, Power, And Justice: Ontological Analyses And Ethical Applications.* NY Oxford Univ Pr 1954.

In the eyes of the author, love, power, and justice present problems and confusions to anguished men in a world estranged. The three concepts are "usually treated" with "vague talk, idealism, and cynicism." To avoid anything of the sort, the author feels obliged to undertake an ontological excursion into Being-itself (or God), there to find the root and basic unity of Love, Power, and Justice. "Love is the drive toward unity of the separated"; Power is "the power of being" (over non-being); Justice "is the form in which the power of being actualizes itself."

TILICH, Paul. *Systematic Theology, Vol II: Existence And The Christ.* Chicago Univ Of Chicago Pr 1957.

TILICH, Paul. *Systematic Theology, Volume III, Life And The Spirit, History And The Kingdom Of God.* Chicago Univ Of Chicago Pr 1963.

TILICH, Paul. *The Courage To Be.* New Haven Yale Univ Pr 1952.

TILICH, Paul. *The Future Of Religions,* Jerald C Brauer (ed). NY Harper & Row 1966.

This book includes three essays on the occasion of Tillich's death and four lectures by Tillich on some of the ideas he was working with just prior to that time. His discussion of "progress" is particularly important in its attempt to revive an idea which has been in disrepute among contemporary thinkers.

TILICH, Paul. *The New Being.* NY Scribner's 1955.

Twenty-three sermons on the Pauline concept of "New Creation" comprise this book. Man, belonging to the old order of things and experiencing the shaking of its foundations, catches a glimpse of a new being fully manifested in Jesus Christ, and is called to participation therein. As a renewal of the old order of creation, New Being yields such things as physical and mental health, the courage to be, and religious certainty. It can be characterized generally as love: freedom from enslaving anxieties, desires, and hostilities; and the fulfillment of true selfhood.

TILLMAN, Frank A and Gale, Richard M and Mc Gee, C Douglas. Ryle On "Use," "Usage," And "Utility". *Phil Stud* 15,57-59 1964.

The article examines Ryle's analysis of "Use," "Usage," and "Utility," charging that Ryle obscures rather than illuminates the distinctions between these concepts. The authors point out that central to Ryle's discussion is an analogy between words and tools, arguing that the analogy fails when Ryle attempts to make a distinction between use and usage. They argue that this failure can be seen in a disanalogy between words and tools in that words, unlike tools, are characteristically used in communication. To use a word correctly, they point out, the speaker must use it in conformity with linguistic custom; the use of a tool requires no such consonance with the customary usage of a group.

TILLMAN, Frank A. Explication And Ordinary Language Analysis. *Phil Phenomenol Res* 25,375-383 Mr 65.

The business of philosophical analysis is clarification, but explicators and ordinary-language philosophers disagree about how to achieve it. Their mutual criticisms or attempts at arbitration are made at such a level of generality as to leave the basis for dispute or settlement obscure. By focusing on supposedly competing analyses of truth—Tarski's semantical and Strawson's performative conceptions of truth—the paper makes clarification itself the subject of clarification in an attempt to determine the basis of dispute.

TILLMAN, Frank. Phenomenology And Philosophical Analysis. *Int Phil Quart* 6,465-482 S 66.

Phenomenology is a little known to philosophical analysts as philosophical analysis is to phenomenologists. Yet despite their isolation, both analysts and phenomenologists share a set of common problems which they seek to treat in related ways. For both Ryle and Husserl, philosophy is an activity; for each stage of Husserl's phenomenological reduction there is a counterpart in Ryle's technique of linguistic analysis. At least one part of these two techniques is designed to clarify concepts. What Husserl discriminates as the invariant features of certain conscious acts are not radically different from what Ryle identifies as the invariant features of the use of certain words; e.g., perceptual verbs. One difficulty with phenomenology is that it provides no criterion for evaluating its results. However, the technique of analytic philosophy provides a powerful and perspicuous way of displaying its results. To the extent that these ways of doing philosophy converge, they are competitors; but analytic philosophy may also be a contributor to the solution of problems of mutual concern.

TIRYAKIAN, Edward A. *Sociologism And Existentialism: Two Perspectives On The Individual And Society.* Englewood Cliffs NJ Prentice-Hall 1962.

"The present study is an attempt to reunite... sociology and philosophy" through a consideration of sociologism and existentialism. The sociologist most closely studied, in the first part, is Durkheim, whose sociologism and conception of society are examined in methodological perspective and whose concern with the "moral crisis of modern society" is emphasized. The second part of the book is concerned with the background of existentialism, the thought of Kierkegaard, Nietzsche, Heidegger, Jaspers, Sartre, Berdyaev, and Marcel. In a "confrontation of sociologism and existentialism" both are taken to be basically "reactions to the disorganization of the modern world" which tend, however, to supplement and reinforce rather than undermine each other.

TITIEV, Robert J. Computer Presentation Of Topics In Measurement Theory. *J Educ Data Processing* 11,12-17 1974.

The paper describes a computer program written to illustrate aspects of the Scott-Suppes theory of measurement and its relationship to the axioms that characterize semiorders.

TITUNIK, Irwin R (ed) and Matejka, Ladislav (ed). *Semiotics Of Art: Prague School Contributions.* Cambridge MA MIT Pr 1976.

The editors have brought together twenty-one representative papers. The selections are divided into five parts: (I) the programmatic paper on aesthetic semiotics; (II) Bogatyrev's four studies on the semiotic analysis of folklore, multifunctional structures and hierarchical transformations; (III) studies of sign systems as pertaining to the

- theater and cinema; (IV) the influential articles on the semiotic analysis of verbal art and its aesthetic function dealing with literary works, the evolution of literary systems and their interrelations with other systems of linguistic use; (V) two papers on the theoretical problems of the visual arts and the structure of semiotic systems in painting.
- TITUS, Harold H.** *What Is A Mature Morality?* NY Macmillan 1943.
- Professor Titus has written a book that has a real and vital message for these times. He begins by describing the moral confusion of the period. "We have lost," he thinks, "a sense of the meaning and goals of living." That is much more serious than the prevailing ignorance of American History, which has just been revealed. It will take more than a book on mature morality to recover the sense of the meaning and goals of life but the book is a contribution in the right direction. The author is on right lines when he insists that human personality is an enduring manifestation of an eternal spiritual order. All ethical and religious issues hang on the answer to that question.

- TODD, William.** Infinite Analysis. *Phil Stud* 13,24-26 1962.
- TODD, William.** Intentionality And The Theory Of Meaning. *Phil Stud* 17,55-62 1966.
- The article examines two traditional theses about meaning, viz., (i) a sentence has a meaning if it has a consistent usage and there are criteria for deciding whether its usage is consistent, and (ii) that meaning is not an intentional concept. The author gives an example of mistaken identity to point out that statements may be true or false depending on the correctness or incorrectness of identification. He concludes from this example that the above theses are inconsistent unless carefully qualified.
- TODD, William.** The Ethical Functions Of The Novel. *Ethics* 75,201-206 Ap 65.
- The psychologizing which is often found in novels differs from scientific psychology in serving a normative or ethical function of evaluating and judging the characterological traits of persons. Therefore, novels center upon ethically interesting traits. In this respect novel writing is similar to everyday conversation, but is also useful in extending our imagination beyond the actual, organizing complex moral thinking, and permitting us to see into the heart of moral questions. The novel has an ethical function, but this need not imply the novelist is trying to persuade the reader of anything.
- TODES, S J and Dreyfus, H L.** The Three Worlds Of Merleau-Ponty. *Phil Phenomenol Res* 22,559-565 Je 62.
- TODES, Sam and Daniels, Charles B.** Beyond The Doubt Of A Shadow: A Phenomenological And Linguistic Analysis Of Shadows. *Sel Stud Phen Exist Phil* 5,86-93 1975.
- The following statements are explained and supported. A counterexample shows one of them as false. (1) A shadow must be cast by something. (2) An object upon which no light falls cannot cast a shadow. (3) A shadow cannot be cast through an opaque object. (4) If a shadow is cast by two things, A and B, it follows that A casts some of it and that B casts some of it. The nature of philosophical inquiry is also discussed.
- TODOROVICH, Miro (ed)** and Hook, Sidney (ed) and Kurtz, Paul (ed). *The Idea Of A Modern University*. Buffalo NY Prometheus Books 1974.
- This work consists of forty-five essays, comments, and replies by scholars who convened to consider the plight of the American university. The work responds to an obvious need—the need to consider foundational problems of the university from a variety of viewpoints. It is divided into three parts: the first devoted to universal higher education; the second to politicalization of the university; the third to a miscellany of problems including collective bargaining, the affirmative-action program of HEW, and tenure.
- TODOROVICH, Miro (ed)** and Hook, Sidney (ed) and Kurtz, Paul W. (ed). *The Philosophy Of The Curriculum: The Need For General Education*. Buffalo NY Prometheus Books 1975.
- This book is an anthology representing an essentially liberal and meliorist view of educational reform. The essayists offer a critical review of the situation of the undergraduate curriculum. The essays are organized under traditional rubrics—humanities, social sciences, sciences. Critics of the curriculum from left and right, e.g., those concerned with "de-schooling" society, or with radicalizing the university, or with re-establishing essentialist education—are absent.
- TOLER, Colette.** Willa Cather's Vision Of The Artist. *Personalist* 45,503-523 Autumn-O 64.
- TOLLEFSEN, Olaf** and Boyle, Joseph M and Grisez, Germain. *Free Choice: A Self-Referential Argument*. Notre Dame Notre Dame Univ Pr 1976.
- The question—does man have freedom of the will? The authors of this book agree that this may be true. In a remarkably detailed way, the authors devote entire chapters to examining the various arguments that have been advanced, historically, to show that there are, sometimes, free choices. Other chapters are devoted to historical arguments that there are no free choices, and the arguments that "free choice" and "no free choice" are compatible. The authors are convinced that the two positions are not compatible. The authors finally argue that sometimes people do make free choices.
- TOMAS, Vincent.** A Note On Creation In Art. *J Phil* 59,464-468 Ag 62.
- This is a reply to a criticism, by Carl R Hausman, of the author's view of creativity in art. Hausman tries to show that the view does not adequately account for "that data which, on Tomas's admission, must be explained." According to Hausman, the view fails to do justice to the datum that to be a work of art, the work must be novel; it "ignores novelty." It is suggested that some ambiguities as to what the data are has led Hausman to his conclusions. The note accordingly attempts to clarify the data and therewith to meet Hausman's objections.

- TOMBERLIN, James E.** About The Problem Of Truth. *Phil Phenomenol Res* 27,85-89 S 66.
- The purpose is to discuss the kinds of things that may not be true. A new theory of truth is not presented; neither is there a theory of meaning. The question is raised, of what sort of things can truth be affirmed, predicated, or assigned? The author suggests that the probable bearer of truth is the "statement," although he does not attempt to define this. One needs to have some awareness of what a statement is not, of what it is that may not be true.
- TOMBERLIN, James E.** The Science Of Politics And Ethics. *Phil Phenomenol Res* 25,414-415 Mr 65.
- TOMKINS, Silvan S.** Affects—Primary Motives Of Man. *Humanitas* 3,321-346 Wint 68.
- TOMLIN, E W F.** *Simone Weil*. New Haven Yale Univ Pr 1954.
- The author grants that "the writings of this marvelously endowed, if sometimes maddening young woman," Simone Weil, "lie outside the conventional literary and philosophical currents," but claims that they can tell us more about "being poised on the edge of the abyss" than "the most subtle of the Existentialists." Simone Weil made an agony of waiting humbly for grace, choosing "scepticism shot through with faith, with all its torments," rather than "faith shot through with scepticism." Her claim to "a new kind of sanctity possible for modern man" lies "not in her conversion at a particular time, but in the steady convergence of her whole being upon a point which throughout life she kept clearly in view."
- TOMLIN, E W F.** *The Great Philosophers—The Eastern World*. NY Wyn 1952.
- This book is an account of the life and work of several important philosophers of the Orient. Separate chapters are devoted to Egyptian philosophy, Babylonia and Israel, Zoroaster, and there is a separate section on Mohammed. The purpose has been to recount not only the individual lives of these Oriental thinkers, but to outline the philosophies characteristic of these various cultures, and in measure to point out some of the common themes involved.

- TONER, Jules J and Mc Glynn, James V.** *Modern Ethical Theories*. Milwaukee Bruce 1962.
- All ethical theories begin with certain moral facts—the distinctions between good and bad and right and wrong, and the senses of obligation, freedom, and responsibility. The ethical systems of moral sense, formalism, utilitarianism, naturalism, analysis, existentialism, and psychoanalysis may be criticized according to whether they explain these facts adequately. All of them (except relativists and subjectivists) implicitly hold to the principle that what is "in keeping with [man's] nature will be considered good." Thus moral arguments resolve into the question of the ultimate end of man, and turn the question of the ultimate nature of man. The authors hold that man's ultimate obligation (derived from God's creation) is "to be morally creative" of values over and beyond specific "do's" and "don't's"

TOOHEY, John J. The Term 'Being'. *New Scholas* 16,107–129 Ap 42.

TORMEY, Alan. *The Concept Of Expression.* Princeton NJ Princeton Univ Pr 1971.

The author, in analyzing typical forms of human expression, seeks to make evident a relation between human behavior and characteristic states of a person. His analysis reveals that intentionality is a necessary condition of actions which express. From his analysis of expression the author draws distinctions among linguistic expressions, assertions, beliefs and nonverbal behavioral expressions. His analysis is also applied to art where he shows that previous uses of the term expression are confused and misleading. His proposal for art is that expressive properties be construed as the "properties of art works whose names also designate intentional states of persons." This proposal enables the author to indicate the relation between the expressive and nonexpressive properties of a work of art.

TOULMIN, Stephen. *Foresight And Understanding: An Enquiry Into The Aims Of Science.* Bloomington Indiana Univ Pr 1961.

This book is an expansion of the thirty-fourth series of Mahlon Powell lectures, delivered at Indiana University in March, 1960. It is an attempt "to focus on science something of the insider's judgment and the outsider's breadth of vision alike," to stand back from the particular specialties and ask the wider questions: What is explanation? What makes an investigation a scientific one? What makes a scientific theory a successful or unsuccessful one? Such critical questions need to be co-ordinated with the factual studies of a representative selection of classic theories, and a critical analysis of the standards to which they appeal. The main chapters of the book deal with forecasting and understanding, the ideals of natural order, forms and styles of theory, and the evolution of scientific ideas. There is a foreword by Jacques Barzun, and a brief index of names.

TRAVIS, D C (ed). *A Hegel Symposium.* Austin Univ Of Texas 1962.

It has been argued that in Hegel we can find justification for all philosophic positions and, indeed, this collection of essays substantiates this argument.

TREDWELL, R F. On Moore's Analysis Of Goodness. *J Phil* 59,793–801 D 62.

It is argued, against Moore, that goodness is not a property; it is not a *property*; it is not nonnatural; it is not indefinable; and its perception does not depend on a special kind of intuition. On the positive side, it is argued that goodness is a number of relations sharing several formal features; that these features can be specified without much trouble; and that, if we first answer the question, "A good *what*" we can generally specify the properties (all of them natural) which lead us to say a thing is good.

TREDWELL, R F. The Problem Of Counterfactuals. *Phil Sci* 32,310–323 O 65.

TRELOGAN, Thomas K (ed) and Care, Norman S (ed). *Issues In Law And Morality.* Cleveland OH 1973.

Each symposium consists of a main paper, comments by a second speaker, and a reply. In Symposium I, Ted Honderich provides a very strong argument against political violence. Edmund L Pincoffs provides the comments centering on the concept of violence, uncritical presuppositions, and a distinction between "symbolic and non-symbolic violence." In Symposium II, Graham Hughes addresses disruption of legal processes and two types of justificatory account. The comments by Hyman Gross are directed to the assumption of a *prima facie* moral obligation to obey the law, and Hughes's claims as to what can count as justification for disruption. In Symposium III, Joel Feinberg argues first that if there are private immoral acts that cause no harm, there is no justification for their suppression by the state. Michael challenges Feinberg's approach more than his conclusions, and reaching normative conclusions from intuition in particular cases. In the final Symposium, Gerald G Maccalum Jr deals with the relationship between law and action in accordance with a person's conscience. Hugo Adam Bedau offers the critical comments.

TRIVUS, Sidney. Dissolving A Muddled In Economics, Or Dr Marx Meets Lord Russell. *Reason Papers* 1-14 Fall 75.

Some important discussions in the controversy over the concept of economic value are reviewed, uncovering a major conceptual muddle. Then, by adapting Russell's method in his analysis of the concept of number, a sound definition of economic value is laid down. The result is a definition which (1) is objective, (2) is quantitative, (3) is not open to the criticisms that cripple previous proposals, and (4) offers a conceptual clarification for economics. The main point of the paper is a formalization and defense of the thesis that the economic value of anything is just what it will fetch in the market.

TRIVUS, Sidney. The Irrelevance Of The Subjective. *Reason Papers* 90-98 Fall 76. In response to criticism by Michael Gorr of my paper, I show that the definition of economic value in terms of equivalence relations over the set of commodities is a purely conceptual clarification, and, in particular, is independent of both the subjective use-value doctrine of the Austrian school and the labor theory advocated by Marx. Criticism of the subjective use-value theory in its role as a causal theory is defended and amplified, and the thesis that what people do is not always what they want to do is defended.

TROELTSCH, Ernst. *Christian Thought; Its History And Application* (ed By F Von Hügel). NY Meridian Books 1957.

The material for this volume was delivered as lectures in England during 1923. Part I, "The Place of Christianity among the World Religions." Part II, "Ethics and the Philosophy of History." Part III, "Politics, Patriotism, Religion."

TRUEBLOOD, David Elton. *Alternative To Futility.* NY Harper 1948.

TRUEBLOOD, David Elton. *Foundations For Reconstruction.* NY Harper 1946.

TRUEBLOOD, David Elton. *Philosophy Of Religion.* NY Harper 1957.

"The purpose of this book is to develop and to expound the essentials of a philosophy which enables men and women of this century to be both intellectually honest and sincerely devout." Part I considers: Faith and Reason, Truth, Knowledge, and Evidence. Part II presents the theistic hypothesis and the various types of experiences which are said to validate it. Part III examines the challenges of dialectical materialism, Freud, and logical positivism. Part IV discusses the basic philosophical problems of the natural and the supernatural, evil, plurality of religions. Part V concludes with God, Freedom, and Immortality.

TRUEBLOOD, David Elton. *The Logic Of Belief: An Introduction To The Philosophy Of Religion.* NY Harper 1942.

This volume represents an inquiry into the structure, types, evidences, and difficulties of belief. "The claims of religion are so revolutionary for human life," writes the author in introducing his work, "that no philosophy can afford to let them remain unanalyzed. To accept these claims uncritically is as unsatisfactory as to reject them uncritically." Thereupon, the nature of belief in general, and religious belief in particular, is examined.

TRUEBLOOD, Elton. *Declaration Of Freedom.* NY Harper 1955.

Dr Trueblood delivered the substance of this book as the Colver Lectures at Brown University in 1954. As a program for the eventual ending of "the present division of the world," he offers "six positive freedoms: to learn, to debate, to worship, to work, to live, and to serve." In his view, "the free society involves a belief in objective morality" ultimately based upon theistic religion; "man becomes an object of value only if his value is derivative."

TSANOFF, Radoslav A. *Civilization And Progress.* Lexington 1971.

This study examines the course of civilization to determine what upward and forward trends are manifested. It rejects the view that progress is inevitable; it suggests rather that the history of civilization is marked by a display of the increasing range of man's capacities for good or for evil. History reveals how much higher men could rise—or how much lower men might sink, depending on their choice of great contending values. Civilization manifests the expanding capacity for human activity to reach in both directions. The future will continue to depend upon choices men make.

TSANOFF, Radoslav A. *Religious Crossroads.* NY Dutton 1942.

"The purpose of this book is to deal critically but also constructively with problems which religious experience presents to reflective thought." The first two chapters outline the historico-comparative method followed in the book. The next two

chapters deal with the "beginnings of religion in primitive societies" and the development of the Old and New Testament traditions. Chapters V-XVII deal with: the relations of religion to morality; the problems of nature and the supernatural; the belief in God—its origins and early forms; the idea of divine unity—pantheism and monotheism; grounds for belief in God; God's character and attributes; sin, salvation, and atonement; religious conversion; prayer; mysticism; the idea of immortality; the problem of evil; the ideal of divine perfection. The final chapter deals with "modern thought and the Christian position."

TSANOFF, Radoslav A. *The Ways Of Genius.* NY Harper 1949.

The purpose of this book is to investigate the creative activity of mind. Superlative manifestations of creative power may be studied in the works of genius. This study turns for evidence to many sources: great artists and poets, scientists and inventors, seers and prophets. In the masterpieces of genius nature is seen in a new and revealing light. As this is the highest expression of being that we know, we are inclined to esteem it as the heart of reality. The conviction that in its creative activity the mind somehow reaches the summit of reality has marked poet and sage and saint.

TSANOFF, Radoslav A. *Worlds To Know.* NY Humanities Pr 1962.

Reality may be conceived in two ways: as substance or as process. The first way has given rise to many problems, primarily associated with the mind/body dualism and with the attempts to overcome it. The second view, given prominence in this study, emphasizes the activist understanding of reality and invites us to conceive of the world in terms of evolution, history, and cosmic drama.

TSANOFF, Radoslav A. Moral Principles And National Interests. *Ethics* 62,11-15 O 51.

TSANOFF, Radoslav Andrea. *Ethics.* NY Harper 1947.

The book provides an outline of a moral philosophy of life. It covers a broad range of topics, including the nature and range of morality, the problems of value and personality, and the main types of ethical theory. It applies the theoretical discussions to concrete situations, arising in personal and social contexts, such as vocational ethics, economic systems, citizenship, and international relations. It ends with a discussion of the relation of morality to religion, and of the idea of progress in the development of civilization.

TURBAYNE, Colin Murray. *The Myth Of Metaphor.* New Haven Yale Univ Pr 1962. Professor Turbayne analyzes metaphors as 'sort-crossings', a notion like that of 'category-mistake'. Metaphors can be recognized as such, or mistaken for literal descriptions of reality. When so mistaken the result is a metaphysics which can first stimulate but tends later to paralyze scientific thought, a history which Turbayne

- illustrates by references to Descartes and Newton. He applies this Berkeleyan notion to visual perception in order to show its illuminative power to be superior to that afforded by naive mechanistic theories of perception.

- This article discusses various medieval answers to the question of how the ancients, who had no opportunity to learn of Christ, could gain salvation. Medieval scholars often sought answers in the statement in the Apostles' Creed that Christ descended into hell during the time his body was in the tomb; many interpreted this as meaning that Christ went to offer salvation to Jews and/or gentiles who were there. Differences among medieval views are traced and analyzed.

- This article offers an explanation for the symbolism in the Petrine passage in Milton's *Lycidas*. The author's thesis is that previous theories have not found any unity in this passage, but that recent investigations in Seventeenth century thought now make a unified interpretation possible. The author believes that the central fact about the passage is that Peter is introduced in his office as the great Pastor, and only in this character. The specific symbolic representations resulting from this are then presented.

- This is the fifth and final symposium volume presented by the Committee on Chinese Thought of the Association for Asian Studies. Earlier studies treated Confucianism in its relation to various institutions and the political process, or showed how Confucianism has appeared in diverse aspects of Chinese culture. The present volume studies the effects of Confucianism in the lives of twelve important Confucians between the sixth and twentieth centuries. Obscure periods and aspects of Chinese history also receive attention. The symposiasts are twelve distinguished scholars from five countries.
- TYLER, Forrest** and Mc Clure, George. Policy Decisions In Science. *Journal Of General Psychology* 77 1967.
- Two kinds of arguments are used to defend the thesis that value judgments and judgments of fact are inseparably intertwined, and interdependent: One drawn from psychology, shows the interdependence of discrimination and preference: experimental animals cannot exhibit a preference without also exhibiting a discrimination, and vice versa. At the level of sophisticated scientific study, the second argument shows that value judgments are requisite in the course of ordinary experimentation, physical or social. Based on this thesis, the further claim is made that value-fact investigations are spiral, or dialectical, and that no circularity is involved in the spiral, but that, on the contrary, more adequate research can now be done on both facts and values.
- TYLER, Forrest** and Mc Clure, George. Role Of Value In The Study Of Values. *Journal Of General Psychology* 77,217-235 1967.
- After a survey of a large number of empirical value studies, we conclude that all such studies are flawed by their failure to realize the interdependence of value judgment and factual judgment. Studies of preference are also, whether it is realized or not, studies of discrimination-ability, and vice versa. There can be no value-free studies of value, nor can there be fact-free studies of fact or value either.
- TYMCZAK, Adolph.** The Essence Of The Sacrifice Of The Mass. *Thomist* 17,525-557 O 54.

- TYMIENIECKA, Anna Teresa.** *Leibniz' Cosmological Synthesis.* NY Humanities Pr 1965.
- This study attempts a comprehensive outline of the Leibnizian metaphysics presented in the form of "an integral point of view." "By such an integral point of view we understand the explanation of the entire system, with all its complexity and profusion of ideas, through its underlying pattern of implicit laws. It is our contention, indeed, that there is such a pattern of laws to be discovered in Leibniz' thinking which is a kind of latent code and gives the framework for the organization of his ideas into an organic body of thought." The author renounces any attempt to trace the historical influences on Leibniz' thought in favor of "an intrinsic analysis of Leibniz' thought in its major ramifications."
- TYMIENIECKA, Anna-Teresa.** *Phenomenology And Science In Contemporary European Thought.* NY 1962.
- Implications of phenomenology and some recent results achieved by phenomenological methods are discussed here under three headings: Apodictic Foundation of Knowledge (Husserl, Ingarden, Nicolai Hartmann, Scheler and others); Knowledge of Others (Jaspers, Marcel, Gurvitch, Reinach, Walter Eucken, Schutz and others); and The World (Heidegger, Eugene Minkowski, Bachelard, Sartre and others). The author believes that phenomenology provides the basis for a "new humanism" by undercutting the separations between man and nature and body and mind. In her concluding chapter she writes; "nature, man and Transcendence are, at the initial point of man's emergence from the purely organic level into the meaningfulness of the world, but three dimensions of one scheme of the universe."

- ULICH, Robert.** *Philosophy Of Education.* NY American Book 1961.
- ULICH, Robert.** *The Human Career: A Philosophy Of Self-Transcendence.* NY Harper 1955. James Bryant Conant sums up his philosophy of life in an affirmation of "a unity of religion and rationality: 'rational piety', if you will, or 'devout reasonableness'." He first distinguishes those who have been concerned about the perennial problems of life into three groups: the theonomous, or God-centered, the logonomous, or reason-centered, and the autonomous, or man-centered, no one of which, alone, can furnish solutions. Religion, art, and education are studied as forms of self-transcendence; and a strong plea is made for regarding knowledge as kinship rather than power.

- ULICH, Robert.** What Do We Want: More Schooling Or More Education? *Main Currents* 8,18-19 Mr 51.
- ULLIAN, J S** and Putnam, Hilary. More About 'About'. *J Phil* 62,305-310 Je 65. In an earlier note, published in *Mind*, a question raised by Nelson Goodman was answered: it was shown that if a statement S is absolutely about k, the negation of S must be also. The solution given, however, applied directly to only a special class of cases, and so was open to misunderstanding. Here the authors extend the earlier solution and then provide an alternative treatment which is felt to have independent interest.
- ULLIAN, J S** and Quine W V. *The Web Of Belief.* NY Random House 1970.
- ULLIAN, J.S.** More On "Grue" And Grue. *Phil Rev* 70,386-389 JI 61. In hopes of establishing the positional character of certain Goodmansque predicates, Barker and Achinstein (*Philosophical Review*, Volume LXIX (1960), pages 511-522) developed a Mr Grue and armed him with easel and sketchpad. This paper reinforces Goodman's reply to them (*Philosophical Review*, pages 523-525). The principal argument is that what a person judges as *matching* is well seen as depending on the person making the judgment, so that appeal to matching can only beg the question at hand. The term 'schmolor' is introduced to facilitate the discussion.
- ULLIAN, J.S.** Splinters Of Recursive Functions. *J Sym Log* 25,33-38 Mr 60.
- ULLIAN, Joe.** Kallias And Other Minds. *Rev Metaph* 10,525-528 Mr 57. In his paper "Knowledge of Other Minds" (*Review Of Metaphysics*, Volume IX, June, 1956, pages 565-568), Nicholas Kallias attempts to demonstrate that numerically identical acts of thought can occur in different minds. The cogency of his arguments is questioned. It is contended that some of them rest on a confusion between what is known and what is true.
- ULLIAN, Joseph S.** A Theorem On Maximal Sets. *Notre Dame J Form Log* 2,222-223 1961.
- ULLIAN, Joseph S.** Peirce, Gambling, And Insurance. *Phil Sci* 29,79-80 Ja 62. Peirce writes "It is an indubitable result of the theory of probabilities that every gambler, if he continues long enough, must ultimately be ruined... if he plays long enough he will be sure some time to have such a run against him as to exhaust his entire fortune.... The same thing is true of an insurance company. Let the directors take the utmost pains... according to the doctrine of chances, the time must come, at last, when their losses will bring them to a stop." This note shows that under the most plausible interpretation of the quoted passage Peirce is committed to a mathematical untruth.
- ULLIAN, Joseph.** A Note On Scheffler On Nidditch. *J Phil* 62,274-275 My 65. In a 1961 note P Nidditch attempted to rescue Ayer's revised formulation of the verifiability principle from Church's well-known attack. In a footnote of Israel Scheffler's richly rewarding *Anatomy of Inquiry* (New York: Knopf, 1963, page 154), there is an argument purporting to prove that Nidditch's retrenchment has the unwelcome consequence ("UC") that "every statement S whatever, unless it is simply a logical consequence of an observation-statement, is indirectly verifiable." We show that Scheffler's argument pins somewhat less than UC on Nidditch, but that with a slight modification it delivers UC and much more.
- ULLIAN, Joseph.** Luck, License, And Lingo. *J Phil* 58,731-738 N 61. Taking its departure from Goodman's "Fact, Fiction & Forecast," this paper explores the problem of providing justification for inductive inference. It argues that conventional treatments of inductive inference, which use a class-and-property logic, are insensitive to the fact that the problems of induction are in large measure problems regarding the applicability of the logic itself. Attention to the functioning of language, both ordinary and specialized, is necessary to develop a logic adequate to the task of dealing with induction.

- UNGER, Peter K (ed)** and Munitz, Milton K (ed). *Semantics And Philosophy: Essays.* NY New York Univ Pr 1974. The articles in this collection are concerned with a variety of problems and programs in the philosophical semantics of natural language. The following articles are included: "Meaning and Semantics," "Semantic Rules," "Tensions," "Positions for Quantifiers," "Opacity and Scope," "Questions about Questions," "Attributives and Interrogatives," "Pragmatic Presuppositions," "The Refutation of Conventionalism," and "Truth."
- UNGER, Peter.** On Experience And The Development Of The Understanding. *Amer Phil Quart* 3,48-56 Ja 66. Empiricist philosophers, including Russell, Pierce, and Ryle, have adduced something like the following as what might fairly be called a conceptual or necessary truth: There are certain concepts which can be fully enjoyed only by someone who has (or has had) the appropriate experience. The author argues to show that *in no accepted or reasonable sense* can the foregoing be considered a conceptual or necessary truth. Rather, any concept fully enjoyed by a human might be so enjoyed without his having any experience whatever. The author then notices that in his own case, his conceptual development is dependent on his experience, without which he would be conceptually impoverished. He suggests that, in light of the arguments of this essay, any adequate explanation of 'his autobiographical truth would exclude any dualistic theory of the mind.
- UNGER, Roberto Mangabeira.** *Knowledge And Politics.* NY Free Pr 1975. The purpose of this book is to present a *total criticism of the liberal doctrine.* The liberal psychology separates understanding and desire, identifies desires as arbitrary, and holds that knowledge is acquired by the combination of elementary sensations and ideas. The liberal political theory contrasts rules and values, asserts that values are subjective, and claims that characteristics of groups are reducible to the qualities of individual members. The coexistence of these principles is ordered in terms of *adequacy, harmony, or appositeness.* But these principles generate antinomies in our conception of the relation between reason and desire and between public rules and private ends.

URMSON, J. O. J. L. Austin. *J Phil* 62,499-507 O 65.

Austin thought he had developed a technique for tackling certain problems pertaining to the nature of language. The justification of this technique was its success in practice. Austin thought it his most important contribution and hoped systematic use of it might lead to the foundation of a new science of language. Urmson tries to give a "fairly full account" of this technique as he himself observed Austin employing it. (He also makes use of some notes of Austin.) Urmson described the technique, tries to show why Austin would want to use it, and adds some comments pertaining to its results.

URQUHART, Alasdair and Rescher, Nicholas. *Temporal Logic*. NY Springer 1971.

USHENKO, Andrew Paul. *The Field Theory Of Meaning*. Ann Arbor 1958.

Ushenko answers the question, "what gives meaning to informative statements?" by combining facts from the psychology of perception with results from logical analysis. His is a restricted contextualist theory of meaning based upon the analogy of dynamic field structures in physics to the total experiential (phenomenological) field. Belief becomes a function of the balance between semantic or response vectors. The vector is both contextually conditioned and an isolable component of the context. As the former it is reached by analysis. As the latter it is derivable from the tensional pattern of vector distribution. The concept of "standard context" reduces this duality to a single type of term. The pattern of cognitive meaning in existence propositions is the same as that of cognitive perception, for both fields "exemplify the experience of information." Pepper's careful prefatory summary makes this approach extensible to aesthetic experience.

VAHANIAN, Gabriel. *The Death Of God: The Culture Of Our Post-Christian Era*. NY Braziller 1961.

The central theme of this book is that our culture is neither anti-Christian nor non-Christian but post-Christian and this is what is expressed metaphorically in the title. The first part of the book argues that Christianity itself is now post-Christian and lives on only in an unfortunate religiosity which makes God a projection of a culture that has forgotten the living Biblical God. The second part of the book argues that our culture is post-Christian and that there is no point in trying to make it into a Christian culture. The author only hints at positive solutions to the religious-cultural crisis—perhaps a secular culture and a God who is "the Wholly Other." There are suggested readings but no index.

VALDÉS, Mario J. *Death In The Literature Of Unamuno*. Urbana 1964.

The reader who does not know Spanish will find this study of little value since all the crucial quotations are in Spanish, even though the book itself is written in English. Valdés analyzes the theme of death in the writings of Miguel de Unamuno (1864-1936), relating it to his existentialist philosophy. Unamuno viewed being as an eternal flux which affirms existence and non-being. All existence is threatened with annihilation, and the personal "yo" which is the living consciousness must undergo an "in-struggle" to exist. While fame and children can keep the "yo" alive, the only meaningful recreation of man can be achieved through the word. His writings are divided into three categories, reflecting the three ways in which they deal with the theme of death: the first type is concerned with the death of the "yo" that is part of the world but exists outside the consciousness of the individual; the second type concentrates on the "personal" "yo" and its confrontation with death, and the third type describes the "yo" that is created in others.

VAN DE VATE JR, Dwight. Disagreement As A Dramatic Event. *Monist* 49,248-261 Ap 65.

Currently, the philosophy of logic is dominated by the mathematical analogy in which logical rules are discovered and described, not made. But logic also has a function: it makes possible the social act of persuading. I argue that one creates oneself by role-playing, by persuading others of one's identity. Therefore, the necessity of persuading is fundamental, and nothing—not even logic—is a descriptive last resort. Logic as a codified affair is a public invention, a response to the necessity of having ways to persuade. It follows that analogies drawn from ethical and political theory are at least as useful to the logical theorist as the customary mathematical ones.

VAN DE VATE JR, Dwight. Other Minds And The Uses Of Language. *Amer Phil Quart* 3,250-254 JI 66.

Wittgenstein held that language has no essence. My purpose in this paper is to show the sense in which language-games have a single final cause, that is, the sense in which language has an essence. In the first section, I argue that Wittgenstein's well-known refutation of solipsism is circular. In the second section, I refute my own refutation of Wittgenstein's refutation, drawing the moral that the final cause of language is personification. Speech presupposes speakers, who must identify themselves to one another as communicants and define for one another the range of solicitations in terms of which each is accessible as a communicant. Such a range of solicitations may be called a "social role."

VAN DE VATE, Dwight. Ehman's Naturalism. *Rev Metaph* 17,135-140 S 63.

In his 1963 article, "Moral responsibility and the Nature of the Self," Robert R Ehman argued that the conflict between determinism and libertarianism rests upon two opposed conceptions of self, respectively the naturalist and the transcendentalist. The author of this article agrees with Ehman's formulation of this conflict, but disputes his reasons for concluding that the self cannot be reduced to an object. Because Ehman fails to see that self and world are co-implicates, his argument leads back to naturalism. The author then suggests another way of understanding the difference between the naturalist and transcendentalist conceptions of the self.

VAN DEN BERG, J. H. *The Phenomenological Approach To Psychiatry: An Introduction To Recent Phenomenological Psychopathology*. Springfield IL Thomas 1955.

The author applies the Husserl-Binswanger approach to phenomenological psychiatry to a number of examples in order to introduce this relatively new psychiatric perspective. The philosophical difficulty is overcome when "the phenomenologist

tries to give a description of the world that has become reality for the patient," or by realizing that man is his world. The book's final chapter contains a brief historical survey of relevant phenomenological literature.

VAN FRAASSEN, Bas C and Lambert, Karel. *Derivation And Counterexample: An Introduction To Philosophical Logic*. Encino Dickenson 1972.

This is a logic textbook aimed at philosophy students with little background in logic. The standard propositional calculus and quantification theory are developed in the first two parts, using both interim and tableau rules constructed for a free logic; i.e., to permit valid inference for all domains, including the empty one. Part three extends this system with a logic of singular terms. Part four treats the metalogical problems of completeness and soundness, and part five briefly explores some philosophical implications of free logic.

VAN FRAASSEN, Bas C. Capek On Eternal Recurrence. *J Phil* 59,371-375 Jl 62.

Milik Capek argues that the theory of eternal recurrence, or the cyclical theory of time, is incompatible with recent developments in physics. He argues that, in view of the theory of relativity and quantum physics, the concept of instantaneous states of the universe—the meaningfulness of which is presupposed by the theory—loses its physical significance. The present paper argues against this contention. It next tries to show that the cyclical theory of time and the theory of eternal recurrence are in fact two distinct theories, contrary to Capek's assumption. Finally, it examines Capek's discussion of the logical difficulties involved in the concept of cyclical time.

VAN FRAASSEN, Bas C. Singular Terms, Truth-value Gaps, And Free Logic. *J Phil* 63,481-494 S 66.

The position has been advanced, most notably by P F Strawson, that a simple statement containing a non-referring singular term is neither true nor false. It is argued that the adoption of this view does not entail the rejection of standard propositional logic and quantification theory. Secondly, it is shown that a natural extension of identity theory to non-referring terms leads to a system known as *free logic*. The final section of the paper is concerned with the effect which the admission of truth-value gaps has on formal semantics, dealing specifically with the principles of bivalence and excluded middle, and with Tarski's criterion for the definition of truth.

VAN ITEN, Richard J. Berkeley's Analysis Of Mind. *Phil Phenomenol Res* 24,375-382 Mr 64.

The article attempts to demonstrate that Turbayne and Grave are mistaken in their analysis of Berkeley's substantialist view of mind. It is suggested that Berkeley first gave a Humean analysis of mind as merely a congeries of perceptions and later shifted to a substance view. He had to allow for mind in his ontology, so he introduced notions, as that by which minds are known. It is concluded that there is confusion, because notions and minds are identified in order to avoid scepticism and yet cannot be identified.

VAN KAAM, Adrian. *Existential Foundations Of Psychology*. Pittsburgh Duquesne Univ Pr 1966.

This study is a "dialogue between the field of scientific psychology and the newly emerging awareness of the structure of man in relation to his world." That awareness, for Van Kaam is expressed in the "perspectival" or existential approach to psychology. He believes that "psychology will be forced to assimilate perspectivity and its implications into the fundamental structure of psychology." Existential psychology is understood as a temporary movement which psychology will assimilate in its proper development. Among the themes taken up in this book are: "The Nature and Meaning of Science," "The Science of Psychology," "Anthropological Psychology," "Anthropological Phenomenology as a Method," and "Anthropological Psychology and Behavioristic Animal Experimentation." The developments the author traces lead to an "existential humanistic psychology" which respects the contributions of "a rationalistic and a behavioristic humanism" and also gives rise to their re-evaluation. A bibliography is included at the end of the book.

VAN LAER, P Henry. *Philosophy Of Science, Parts One & Two: A Study Of The Division And Nature Of Various Groups Of Sciences*. Pittsburgh Duquesne Univ Pr 1962.

Part One of this work, titled *Science in General*, was published in 1956 as Volume 6 of the Duquesne Studies, Philosophical Series. The author points out that the term "science" is used in a broad way so as to include philosophy and theology as well as the physical sciences. The book is primarily concerned with the subdivision of this broad field of science into appropriate categories and groups. The first chapter discusses the importance of a good division in general, chapter two surveys some traditional divisions such as those of Aristotle, the medieval philosophers, Francis Bacon, Comte, and Spencer. Chapter three sets forth some criteria for adequate division, such as the distinction between theoretical and practical sciences, the distinction between supernatural and natural origins, the distinction between philosophy and the special sciences, and finally the distinction between ideal or formal, such as mathematics, and experiential.

VAN LAER, P Henry. *The Philosophy Of Science: Part I, Science In General*. Pittsburgh Duquesne Univ Pr 1956.

This is the first of two volumes growing out of lectures delivered by Professor Van Laer of the State University of Leyden while he was a visiting professor at Duquesne University in 1953. The present volume discusses science as a system, the role of abstraction and necessity, the object and foundation of science, and scientific methods.

VAN LEEUWEN, Arend Theodoor. *Critique Of Earth*. NY Scribner 1974.

The main argument of *Critique of Earth* is that understanding of Marx's critique of religion and theology is not to be found in his opposition to "religion" in the current sense of the term, but in his critique of political economy. Leeuwen's intent is to pave the way toward a critical theology. Indeed he says, "Marx's 'Critique of earth' impels us toward a transformation of our theological categories and an interdisciplinary critique of our theological method."

VAN MELSEN, A G M. The Impact Of Science On Culture. *Int Phil Quart* 1,503-512 S 61.

VAN MELSEN, A G M. The Impact Of Science On Culture. *Int Phil Quart* 1,503-512 S 61.

VAN MELSEN, Andreas G. *Science And Technology*. Pittsburgh Duquesne Univ Pr 1961.

This book is published in both English and Dutch. The author, a Dutch professor, analyzes scientific method. He finds physical science to be a typically human discipline. He analyzes the nature of technology and its influence upon man. The author interprets man as "spirit-in-matter" and he finds both limitless possibilities and great danger inherent in our technological civilization.

VAN NUYS, Kelvin. *Is Reality Meaningful: Static Contradictions And Dynamic Resolutions Between Facts And Value*. NY Philosophical Lib 1966.

This book performs a task which is very much due, and is perhaps as much a turning point in the history of philosophy as anything could be: to explore the results in epistemology, ontology and axiology of dynamizing our theory of value as we have dynamized that of the facts. This move makes it possible to deal with the question "Is Reality Meaningful?" in a new way. That question seems as important as any in philosophy today, when many claim that the sense of meaninglessness and profaning of life is modern civilization's deepest problem. A central aim of the book, then, is to find a basis for holiness, or the sacralization of life. The Problems of Evil, Mechanism and Knowledge are treated especially carefully.

VAN NUYS, Kelvin. *Science And Cosmic Purpose*. NY Harper 1949.

This book is a study of Whitehead, Dewey and Wieman to consider whether their concept of value or good is dynamic as is their concept of reality. The conclusion is that they retain a static conception of value, and that this is the source of their inability to defend a cosmic purpose for good, that is an omnipotent God, and their defending only a limited God, or agnostic humanism. A concept of dynamic value is

presented, and how it solves problems of mechanism and evil is discussed, with the claim that it makes a cosmic or omnipotent God logically defensible. The dimension of holiness is argued to require a cosmic God who designs reality as required by dynamic good.

VAN SANT, George M. A Proposed Property Of Relations. *J Phil* 56,25-30 Ja 59.

The article briefly summarizes the history of the logic of relations and describes how relations have traditionally been defined in terms of their properties, e.g., dyadic, symmetric, transitive, etc. The purpose of the article is to propose a new relational property denominated "constitutivity," and suggests that all relations should be distinguished as to whether they are "constitutive," "inconstitutive," or "medio-constitutive." Some consequences of the distinction are traced. It turns out that, since "constitutive" relations are really complex expressions (actually, definite descriptions), there is a question as to whether constitutive relations should be treated as relations at all in formal systems.

VAN STEENBERGHEN, Fernand. Thomism In A Changing World. *New Scholas* 26,37-48 Ja 52.

VAN STEENBURGH, E W. Berkeley Revisited. *J Phil* 60,85-88 F 63.

Berkeley's main argument against matter *qua substratum* rests on an analogical principle of meaning and therefore not on one of verifiability. But, actually, I have an additional reason for revisiting Berkeley. If he is using an analogical principle of meaning on which 'matter' but not 'God' is meaningless, this difference must be grounded in a limitation on use of analogy. I am also concerned with this limitation. Not only does it correct the medieval analogical tradition, summed up in Cajetan's *Analogy of Names*, but it is, as far as I know, new to philosophy.

VAN STEENBURGH, E W. Metaphor. *J Phil* 62,678-688 N 65.

'Literal' and 'metaphorical' are analyzable as semantical predicates on the same logical footing with, e.g., 'true'. Just as a statement is either true or false, but not both, so the meaning of an expression is literal or metaphorical, but not both. I then characterize *perspective metaphor*, showing that it is not susceptible of equivalent literal paraphrase no matter how much the literal vocabulary of the language is enriched. That perspective metaphors have what recent positivists called "pictorial" meaning is not disputed. However, it is shown that *root metaphor*, in the sense made familiar through the work of Pepper, differs from perspective metaphor and by this difference escapes the charge of having pictorial meaning. *prescinding metaphor*, by use of which meaning for technical philosophical terms is frequently developed, is then shown to differ from both.

VANDENBERG, Donald. *Being And Education: An Essay In Existential Phenomenology*. Englewood Cliffs NJ Prentice-Hall 1971.

This book attempts the application of a radically individualistic philosophy to a common historic institution, i.e., the development of a phenomenological existential view in educational theory and practice. Often complex and idiosyncratic in language and style, the author nevertheless does manage to convey his meanings clearly. The work is a useful corrective to modern behavioral and technical

interpretation of education. It introduces to continental thinkers ideas not usually brought into the study of the philosophy of education. Simultaneously, significant American contributions to educational thought, e.g., Dewey's experimentalism, are re-interpreted as continuous with recent philosophic development. Abstract considerations in the book are connected to practical matters of school policy, social policy in education, and classroom practice.

VANDER VEER, Garrett L. Austin On Perception. *Rev Metaph* 17,557-567 Je 64.

Against J L Austin's criticism, the author defends the idealist position that perception involves inference. To establish his thesis he first examines Austin's distinction between seeing and hearing and discusses Austin's position on visual perception. He then argues that, although ordinary usage limits the term "inference" to deliberative judgments, perception should be considered inferential in an extended sense of the term because all perceiving shares important characteristics with what we normally call inference. These shared characteristics include going beyond the given, using evidence, and possibly being mistaken.

VEATCH, Henry B. *Rational Man: A Modern Interpretation Of Aristotelian Ethics.* Bloomington Indiana Univ Pr 1962.

Professor Veatch uses the ideas of Socrates, Plato, and Aristotle to formulate his own normative ethics. He rejects mere analysis, ethical relativism, utilitarianism, and existentialism.

VEATCH, Henry B. *Two Logics: The Conflict Between Classical And Neoanalytic Philosophy.* Evanston IL 1969.

VEATCH, Henry Babcock. *Aristotle: A Contemporary Appreciation.* Bloomington Indiana Univ Pr 1974.

As Aristotle is the philosopher of common sense for our author, Veatch traces this common sense approach in Aristotle's *Physics* with the notion of change and the four causes explaining change; in his *De anima* with the notion of *psyche* explaining animate objects; in his *Ethics* with the notion of final cause; in his *Metaphysics* with the notions of substance, matter and form; and in his *Organon* with the unity of the categories and concrete reality through the inductive method. The author defends Aristotle's common sense approach against the approach of modern science—nature has a final cause, which is not a conscious seeking of an aim—and modern thought.

VEATCH, Henry Babcock. *For An Ontology Of Morals: A Critique Of Contemporary Ethical Theory.* Evanston IL 1971.

VEATCH, Henry Babcock. *Intentional Logic; A Logic Based On Philosophical Realism.* New Haven Yale Univ Pr 1952.

This book challenges today's opinion that logic is simply either mathematical or symbolic. Starting from the presuppositions of classical realistic philosophy, the argument is directed toward showing that such realism demands a logic of its own. Examining the three traditional items of logic—concepts, propositions, and arguments—it is shown how they can be interpreted from a realistic or intentional point of view.

VEATCH, Henry. *Realism And Nominalism Revisited.* Milwaukee Marquette Univ Pr 1954.

The author derives both realism and nominalism in contemporary logic from the adoption of Frege's function-argument scheme and the identification of functions with universals and arguments with particulars. By way of a critical discussion of the views of Bertrand Russell and W V Quine, he develops his thesis that the traditional principle of intentionality, which recognizes both the instrumentality of concepts and their difference. The analytic school of philosophy and those who cast doubt on the more hopeful claims of science in knowledge and practice are strongly attacked.

VEATCH, Henry. Matrix, Matter, And Method In Metaphysics. *Rev Metaph* 14,581-600 Je 61.

Taking metaphysics in its Aristotelian sense to mean the investigation of being qua being, the author contends that its "matrix" (its place of origin, field of operations, and continuing and ultimate point of reference) is everyday life, characterized by its practical or existential inescapability. He then examines the charge that the truths of metaphysics illegitimately claim to be both necessary and factual, and argues in response that the objection rests upon a confusion of the character of one's intentional instrument (the sentence or proposition) with that of the object intended.

VEATCH, Henry. Non-Cognitivism In Ethics: A Modest Proposal For Its Diagnosis And Cure. *Ethics* 76,102-116 Ja 66.

Non-cognitivism relies for its defense upon G E Moore's open question argument for a naturalistic fallacy. But this argument is invalid as applied to real definitions, which are not analytic truths. G E Moore's own conclusions about goodness are definitions in this sense. A definition of the good is possible. A valid one will allow for the non-cognitivist's points that goodness reflects some pro-attitude, that goodness is supervenient, and that goodness cannot be equated with the properties of a thing. An Aristotelian, naturalist definition in terms of a thing's natural perfections or potentialities meets these criteria while also making goodness knowable and objective.

VEATCH, Henry. The Truths Of Metaphysics. *Rev Metaph* 17,372-395 Mr 64.

The author contends that there can be universal and necessary metaphysical principles whose truth is guaranteed by an appeal to the law of contradiction. Although it is now commonly assumed that the necessity of such truths arises from purely logical or linguistic relationships within the statements themselves, in fact it is because of a necessity in the things the propositions are about that they come to have their characteristic of logical or linguistic necessity. Thus the author argues against Kant that metaphysical truths can be analytic and against analytic philosophers that such truths are truths about the world.

VEATCH, Henry. Tillich's Distinction Between Metaphysics And Theology. *Rev Metaph* 10,529-533 Mr 57.

VEAZIE, Walter B. John Dewey And The Revival Of Greek Philosophy. *Univ Of Colorado Studies* 1-10 1961.

After some personal reminiscences of Dewey, leading to Dewey's own claim to be identified with "the revival of Greek philosophy," the question of "What Greek philosophy?" is addressed. Dewey's roots in Aristotle, particularly in Aristotle's biology, are traced; Dewey's derivation of "habit" from Aristotle's *hexis*, the origins of his views on intelligence and freedom, on teleology and mind, on value, on contingency and chance are all carried back to Aristotle.

VENABLE, Vernon. *Human Nature: The Marxian View.* NY Knopf 1945.

VENDLER, Zeno. *Linguistics In Philosophy.* Ithaca NY Cornell Univ Pr 1967.

Seven papers, attempting to explain and illustrate how the methods and results of linguistic science, especially of transformational grammar, can be used to cast light upon central problems of analytic philosophy. In the new papers an effort is made to reconcile the empirical basis of linguistic science with the *a priori* nature of philosophical reasoning, to understand the nature of singular terms, and to evaluate Austin's position concerning the nature of language and reality. Among other things it is argued that the use of formal linguistic techniques is a natural extension of the "ordinary-language" approach, that an understanding of syntax is necessary for an understanding of problematic utterances, and that the crucial differences in meaning between words like 'cause' and 'make', 'effect' and 'result', 'fact' and 'event', 'good' and 'yellow', are given by syntax.

VENDLER, Zeno. Comments On Jerrold Katz's "The Relevance Of Linguistics To Philosophy". *J Phil* 62,602-605 O 65.

VENDLER, Zeno. Reply To Professor Dubs's "Language And Philosophy". *Phil Rev* 67,395-396 Jl 58.

VENDLER, Zeno. The Grammar Of Goodness. *Phil Rev* 72,446-465 O 63.

Vendler explains what is behind Moore's intuition that goodness is a "non-natural" quality, that it is somehow more remote from the thing than the thing's color, shape, or other "natural" qualities. He does so by showing that the adjective "good" is more remote from the grammatical subject than are adjectives like "yellow" and "round." "Good" is tied to a subject in a more complex and less immediate way than other adjectives are.

VERHAAR, John W M (ed). *The Verb 'Be' And Its Synonyms: Philosophical And Grammatical Studies*, Parts II-IV. NY Humanities Pr 1969.

This volume examines the concept of "being" in three non-Indo-European languages: Twi (an African language native to Ghana), Modern (Mandarin) Chinese, and Arabic. The implicit aim of the series is to see whether there are universal conceptions of being.

VERNON, Thomas S. Descartes' Three Substances. *S J Phil* 3,122-126 Fall 65.

VERSENYI, Laszlo. *Heidegger, Being And Truth*. New Haven Yale Univ Pr 1965.

This is an account of the development of Heidegger's thought from its relatively humanistic beginnings to its rejection of what Heidegger terms anthropological and metaphysical philosophizing. The study concludes with a criticism of Heidegger's attempt to transcend traditional philosophy by way of a more original, non-humanistic thinking.

VERSENYI, Laszlo. *Man's Measure: A Study Of The Greek Image Of Man From Homer To Sophocles*. Albany NY Univ Of NY Pr 1974.

This is a study of the pre-philosophical development of the Greek image of man from its Homeric beginnings to its Fifth Century culmination. Instead of attempting to be all-inclusive, the discussion concentrates on a few crucial turning points—such as the Iliad, the Erga, some lyric poetry, the Oresteia and the Oedipus Tyrannus—in this development, and emphasizes the close correspondence between the form and content of the literary representations that laid the groundwork for later philosophical reflections on human existence.

VERSENYI, Laszlo. *Socratic Humanism*. New Haven Yale Univ Pr 1963.

The aim of this study is to give a coherent account of Socratic thought in its purity, free of the constructions placed upon it by its disciples. The study is introduced by a discussion of the work of Socrates' immediate predecessors, the Sophists; it is concluded by an Epilogue on some un-Socratic elements in Plato's middle dialogues and an Appendix on the Socratic Problem.

VERSENYI, Laszlo. "Plato And Poetry: The Academicians' Dilemma" in *Ancient And Modern: Classical Antiquity In Comparative Perspective*, J W Eadie (ed). Ann Arbor 1977.

This paper argues that Plato's criticism of poetry in Book 10 of the *Republic* is based on and is the logical concomitant of his epistemology, ethics, and psychology, and that, therefore, in the ancient quarrel between philosophy and poetry Platonists have to choose sides: they must either accept the substance of Plato's criticism or reject the rest of his thought.

VERSENYI, Laszlo. Dionysus And Tragedy. *Rev Metaph* 16,82-97 S 62.

The author discusses the madness provoked by Dionysus' epiphanies and analyzes his relationship to Apollo before examining Dionysian characteristics of fifth-century drama. He discerns three such aspects; first, the use of the mask, a Dionysian symbol, and the actors' possession by their roles; second, the intense involvement of the audience in the play; third, tragedy's effect of catharsis. However, he submits that there is one aspect of tragedy for which the Dionysian analysis is inadequate: Dionysian ecstasy fails to resolve the problem of being a man, for the absolute dissolution of self and nature in ecstasy is ultimately inhuman.

VESEY, G N A. Knowledge Without Observation. *Phil Rev* 72,198-212 Ap 63.

Vesey criticizes Anscombe's account of knowledge without observation as knowledge in which there are not separately describable sensations, having which is in some sense our criterion for saying something. On this definition, he argues, we would not be allowed to say, e.g., that when a person sees that something is red, he is observing that it is red, he offers another analysis of what Anscombe was trying to get at, using his dis-tinction between "proper-object" perceptions and "association-mediated" perceptions, and uses this analysis to comment on some wider issues in mind-body theory.

VESEY, Godfrey N A. *Perception*. Garden City NY Anchor Books 1971.

The author offers an alternative to causal explanations of perception. His contention is that a major problem with the causal explanation hinges on the relationship of appearance to reality. He develops this contention by an extensive discussion and criticism of Descartes's version of this relationship. He would eliminate the difficulties of the Cartesian view by distinguishing epistemic appearances, which are non-causal and which are the seeing of things as being things of a certain sort, from optical

appearances and resemblances. His alternative is based upon D W Hamlyn's contention that the relation of appearance to reality lies in our concepts.

VICKERS, John M. Some Features Of Theories Of Belief. *J Phil* 63,197-201 Ap 66. A psychological theory of belief faces three fundamental questions. (I) The question of evidence. What is to count as evidence that a subject has or does not have a given belief? (II) The question of *a priori* laws. What are the implications holding among distinct belief statements? (III) The question of ontology. What objects are asserted to exist by the theory in question? This paper is a brief comment on what may have been heretofore ignored, that these questions are intimately related. In particular it is argued that if betting behavior is evidence for what an individual's beliefs are then the laws of probability are *a priori* laws of belief and there are objects of belief which have at least a truth functional structure.

VINCENT, R H. The Paradox Of Ideal Evidence. *Phil Rev* 71,497-503 O 62.

Popper has cited what he calls "the paradox of ideal evidence" as a reason for rejecting the subjective theory of probability—the theory that probability is a measure of the rationality of our beliefs. Vincent considers the supposed paradox, argues that what Popper finds "startling" is not startling, and concludes that it is no paradox at all—hence it does not provide grounds for rejecting a subjective theory of probability.

VIRTANEN, Reino. *Claude Bernard And His Place In The History Of Ideas*. Lincoln 1960.

The life and writings of Bernard are here examined with a view to establishing the philosophic status and influence of his ideas. His thought is related to that of Descartes, Pascal, Leibniz, Kant, and Goethe, and a chapter is devoted to distinguishing his positivism from that of Comte. The influence of Bernard's conceptions of scientific method, the physico-chemical conditions of life, and determinism is briefly traced through some modern developments in physiology, psychology, the logic of science, and philosophy; and his impact on the novels of Zola and Paul Bourget is discussed. There are notes and an index included in the book.

- VISSCHER, Maurice Bolkes (ed).** Humanistic Perspectives In Medical Ethics. Buffalo NY Prometheus Books 1972.
- VISSCHER, Maurice Bolkes.** Ethical Constraints And Imperatives In Medical Research. Springfield IL Thomas 1975.
- The thesis of this book is that "there is an ethical imperative for physicians as a group to promote medical research, including studies on human subjects." The author views many of the current restrictions regarding such research as resulting from "paranoid fears or sectarian bias." The basic ethical principle of science is "complete truthfulness," or "complete honesty." Given this principle and an introduction to ethical considerations as a part of his medical education, the medical practitioner or researcher should have all the moral guidance he needs with respect to his investigations. The author discusses specific ethical problems concerning experimentation with fetuses, children, prisoners, mental patients, animals, and drugs. Codes of ethics and laws concerning medical research are also examined.

- This book is an analysis and explication of metaphysical explanation and its special techniques. A defense of traditional metaphysics against the attacks of recent positivism is presented. The fundamental difference between the analysis of reality which characterizes positivism as against traditional metaphysics is developed. Aristotle's *Metaphysics* provides the subject for the first chapter. Positivist criticism of Aristotle and the positivistic view of causation follows. The remainder of the book is a defense of Aristotle's metaphysics, a reconstruction of the traditional concept of causation, and the religious implications of traditional metaphysics.

- VON BERTALANFFY, Ludwig.** Robots, Men And Minds: Psychology In The Modern World. NY Braziller 1967.
- The so-called gap between science and the humanities is largely illusory. What the real gap amounts to is intellection for profit versus intellection for insight and aesthetic satisfaction. Science may be like bookkeeping (positivistic, behavioristic, commercialistic) or it may be humanistic. One surprise in Bertalanffy's defense of the theoretical history of Vico to Sorokin. He claims that Spengler's work has often proved correct—especially in an organismic, systems, way. His model is no more absurd than the billiard balls of mechanistic analysis of Descartes' animal machine. The American robot model also leaves much to be desired. What are needed are relevant models which do not neglect or deny human concerns. This requires a system or grand view instead of the twisted gimmickism of the establishment and its slick but ignorant purveyors in the sciences and technology.

- VON ECKHARDT, Ursula M.** The Pursuit Of Happiness In The Democratic Creed; An Analysis Of Political Ethics. NY Praeger 1959.
- "The pursuit of happiness" is analyzed, first in the terms understood by Jefferson and his contemporaries, and then in terms of modern knowledge of man and society. The author defines "a genuine liberal... as one who considers individual personal liberty a prime value in all just human associations," one who is "not necessarily a progressive" and "more likely to be a conservative since he does not believe in externally imposed changes, even if these changes reflect the advancement of science." The pursuit of happiness is a revolutionary doctrine. The individual's right to rebellion is the inevitable consequence of his natural liberty, and "The right to secession, therefore, is prior to any obligation of loyalty." The political consequences of the pursuit of happiness require "absolute repudiation of a nihilistic metaphysics"; and "the yardstick of historicity" must give way to the yardstick of scepticism. The political philosophy does not "necessarily imply" democratic government "in the

formal sense," but does insist that governments derive their power from the consent of the governed.

VON FRITZ, Kurt. *The Theory Of The Mixed Constitution In Antiquity, A Critical Analysis Of Polybius' Political Ideas.* NY Columbia Univ Pr 1954.

Originating in Plato and recurring in Aristotle, the theory of the mixed constitution has exerted great influence upon the political theory and practice of the modern world. The author includes a discussion of Hobbes' theory of sovereignty in its relation to the theory of Polybius, because Hobbes "is finding so many adherents in our time." Three appendices provide excerpts from Polybius dealing with political theory, and discussions of his concept of *tyche* and of his criticisms of the idealizations of Cretan political and social institutions.

VON KUEHNELT-LEDDIHN, Erik. *Liberty Of Equality: The Challenge Of Our Time,* John P Hughes (ed). Caldwell ID Caxton 1952.

This book deals with the relationship between equality and liberty, as they are extended to their limits in political contexts. Neither arbitrary equality nor complete liberty are possible, the author asserts, but there is a solution to this dilemma and the author seeks to point out this solution, one that can only very roughly be regarded as resting on the rule of reciprocity, in this volume.

VON LEYDEN, W. *Remembering: A Philosophical Problem.* NY Philosophical Lib 1961. This book is a persuasive attack on Ryle's notion that "remember" is an achievement verb, and on Russell's view that all acts of memory might be entirely misleading. Although we can never be sure in any particular case that our memories are veridical, we need not adopt total scepticism.

VON LEYDEN, W. 'Existence': A Humean Point In Aristotle's *Metaphysics*. *Rev Metaph* 13,597-604 Je 60.

Hume first criticized the ontological proof by showing that existence is not an attribute. The author argues that two lines of inquiry discernible in the *Metaphysics* bring Aristotle close to Hume's point. The first consists of attempts to show that existence is not a descriptive word; the second consists of attempts to show that existence is a formal concept. Citing relevant passages, the author discusses the relation between existence and genus, substance, element, and essence, and the doctrine that there are many senses in which things are said to be. He then submits that Aristotle, like Hume, does not explicitly state what function an existential statement has.

VON LEYDEN, William. Antiquity And Authority: A Paradox In Renaissance Theory Of History. *J Hist Ideas* 19,473-492 O 58.

VON MERING, Otto. *A Grammar Of Human Values.* Pittsburgh Pittsburgh Univ Pr 1961.

This is the twenty-first volume of the series "A Comparative Study of Values in Five Cultures," sponsored by the Laboratory of Social Relations, Harvard University, under a grant received from the Rockefeller Foundation. On the basis of valuation statements recorded by the author in interviews with individuals in two communities of southwestern United States, a classification of values into "simplistic," "isolative personal," "comprehensive," and "inclusive interpersonal" is presented, and its implications are discussed. The author also supplies extensive data on the methodology of the study.

VON MISES, Ludwig. *The Ultimate Foundation Of Economic Science: An Essay On Method.* Princeton NJ Van Nostrand 1962.

VON MISES, Ludwig. *Theory And History; An Interpretation Of Social And Economic Evolution.* New Haven Yale Univ Pr 1957.

This is a book in economic philosophy in which the author distinguishes between the unique epistemological problems to be found in the social sciences, metaphysics, history and the physical sciences. He argues that human behavior is essentially enigmatic. The work is divided into four Parts: I Value, II Determinism and Materialism, III Epistemological Problems of History and IV The Course of History.

VON NEUMANN, John. *The Computer And The Brain.* New Haven Yale Univ Pr 1958.

VON NEUMANN, John and Morgenstern, O. *Theory Of Games And Economic Behavior.* Princeton NJ Princeton Univ Pr 1944.

This is a difficult technical book, the product of collaboration between an outstanding mathematician and a distinguished economist, and is addressed primarily to mathematicians and mathematical economists. It initiates a radically new direction in constructing a mathematical analysis of human behavior, and it also has important implications for the theory of inductive inference.

VON RINTELEN, Fritz-Joachim. A Realistic Analysis Of Values. *Int Phil Quart* 4,419-442 S 64.

The author sketches out the main lines of a theory of value, analyzing first the value phenomenon in general, then the principal areas of value: political, cultural, esthetic, ethical, religious. With regard to the value phenomenon in general, its essential characteristics are as follows: (1) a qualitative content of meaning, (2) toward which a positive or negative attitude of approval (or disapproval) is taken (3) by a person; (4) involving him in a dynamic tendency toward actual realization of the value idea in the concrete order of real existence, (5) according to different degrees of intensity of perfection. Values have both an intrinsic and relational worth, the intrinsic character increasing the more closely the value is connected with the personal. The characteristics of the different major areas of value are then analyzed.

VON URBAN, Rudolf. *Beyond Human Knowledge: A Consideration Of The Unexplained In Man And Nature.* NY Paget Pr 1958.

The reflections of a seventy-eight years old physician, the book sketches very briefly for "the average reader" scientific theories of the development of life, viz., biology, physiology and psychology. The conclusion is offered that there are as many mysteries in these sciences as in "supernormal phenomena" or "the nature of the Creator." Narration of numerous personal experiences of a mysterious kind is directed to show that telepathy, clairvoyance and prophecy are probably genuine. Additional mysterious personal experiences are cited in explanation of the writer's belief in God and life after death.

VON WEIZSÄCKER, Carl Friedrich. *The Relevance Of Science: Creation And Cosmogony.* NY Harper & Row 1964.

VON WRIGHT, G H. *Form And Content In Logic.* NY Cambridge Univ Pr 1949.

VON WRIGHT, Georg Henrik. *Causality And Determinism.* NY Columbia Univ Pr 1974.

Von Wright analyzes cause and effect as a "conditionship relation" and not a functional relationship. His treatment of the nature of actions is brief. He confines himself mainly to showing that universal determinism (meaning that nothing happens without a sufficient cause) is compatible with free action. Parts of the book, including a short appendix, are devoted to formalizations of the model and tensed logics which von Wright uses to interpret his views.

VON WRIGHT, Georg Henrik. *Essay In Modal Logic.* NY Humanities Pr 1953.

VON WRIGHT, Georg Henrik. *Explanation And Understanding.* Ithaca NY Cornell Univ Pr 1971.

The main theme of the book is the investigation of the interrelationships between

causal and teleological explanations (the "Two traditions"). Von Wright's main thesis is that although an adequate explanation of human actions must involve teleological or intentional considerations, this is not to deny that actions do have causes. The last chapters deal with the implications of the earlier treatment for explanations in the social sciences, primarily history. Many interesting questions are raised which, in accordance with the author's intentions, remain open. The book is a programmatic summary and survey of some major problems in the philosophy of "actions."

VON WRIGHT, Georg Henrik. *Logical Studies.* NY Humanities Pr 1957.

VON WRIGHT, Georg Henrik. *Norm And Action: A Logical Enquiry.* NY Humanities Pr 1963.

After some preliminaries on the logic of change and the logic of action the author develops an extended theory of norms in this companion volume to his *The Varieties of Goodness*. Although the book will be of particular interest to deontic logicians, its philosophic value is greatly enhanced by a concern for broader issues, including problems in the ontology of norms.

VON WRIGHT, Georg Henrik. Carnap's Theory Of Probability. *Phil Rev* 60,362-374 J1 51.

VON WRIGHT, Georg Henrik. Ludwig Wittgenstein, A Biographical Sketch. *Phil Rev* 64,527-545 O 55.

VON WRIGHT, Georg Henrik. Practical Inference. *Phil Rev* 72,159-179 Ap 63.

Von Wright examines practical inferences of the form: One wants to attain x. Unless Y is done, x will not be attained. Therefore Y must be done. He discusses the senses of "must" and "ought," the relation of inference to action in first and third person forms, wanting ends and wanting means, making oneself do something, and derived obligation.

VOORHEES, Richard J. Marcel Aymé And Moral Chaos. *Personalist* 39,48-59 Wint-Ja 58.

VREE, Dale. *On Synthesizing Marxism And Christianity.* NY Wiley 1976.

Vree became curious about the viability of the movement of recent years for a "dialogue" between Marxism and Christianity. Faced at the outset of his investigation with the existence of "many versions of Marxism and Christianity," he chose for analysis those versions which "are normative and paradigmatic." It may even be, according to Vree, "that a Christian can be a Marxist, as long as he or she does not buy the whole package." Furthermore, "Marxists and Christians can engage in dialogue, they can work together." As to a thorough merger or synthesis, however, the "price to be paid" is, unfortunately, a radical revision of one or both of the two viewpoints, which can scarcely be accepted by confirmed adherents of either.

VROOMAN, Jack R. *René Descartes: A Biography.* NY Putnam 1970.

Vrooman's biography links the development and publication of Descartes' works to his personal friendships and associations, and to the climate of opinion which existed during his time. A special feature is Vrooman's translation of much of Descartes' personal correspondence. However, Descartes seems to reveal little of himself, even in letters to his closest friends, and Vrooman frequently indulges in speculation concerning his personality and character.

VYVERBERG, Henry. *Historical Pessimism In The French Enlightenment.* Cambridge Harvard Univ Pr 1958.

The presence of concepts of decadence and historical flux in the thought of eighteenth century France is pointed out by this study. Antecedents of eighteenth century optimism and pessimism are indicated in brief sketches on seventeenth century thinkers; the eighteenth century doctrine of optimism is characterized by accounts of the principal forms optimism took; and pessimistic views are related to various intellectual elements of the time. Examinations of the social, historical, and scientific theories of leading writers, from Montesquieu to Sade, are offered as evidence of the intermixture of pessimism with the more characteristic optimism of the era.

WADE, Francis C. "St Thomas Aquinas And Teaching" in *Some Philosophers On Education*, Donald Gallagher (ed), 67-85. Milwaukee Marquette Univ Pr 1956.

Aquinas' theory of teaching is based on his theory of man, that man is a being whose process of knowing requires sense experience in order to get him in touch with the

world he lives in. What stands between teacher and student is reality. What each uses are the self-evident principles of reality (what is, is; what is not, is not; what is can be). No one teaches these for they are necessary as preconditions for affirming or denying with certainty. I work out fully in an example what this means. To teach a fact demands appealing to sense experience or the word of another, where principles come into play indirectly, again fully exemplified.

WADE, Francis C and Earle, William and Stallknecht, Newton P. Freedom And Existence: A Symposium. *Rev Metaph* 9,27-56 S 55.

WADE, Francis C. Causality In The Classroom. *Mod Sch* 28,138-146 Ja 51.

This article raises the question: What does a teacher do when he teaches? He does not stir up the student to remember (Plato), nor merely encourage the student to rearrange what he already knows (J Dewey), nor does he give the student knowledge as one might give him a pencil. What a student knows, and no one can teach him, are the principles of being (what is, is; what is not, is not; what is, can be). With these, he can from examples begin to see what it is that the examples involve. I conclude that the causality of the teacher is intentional causality, which is in the line of specification rather than efficiency.

WAGAR, W Warren. *The City Of Man: Prophecies Of A World Civilization In Twentieth Century Thought.* Boston Houghton Mifflin 1963.

professor Wagar's stated aim is to study the search for a philosophy of world order. The major sections are concerned with attempts to set goals of unity and reason on the international scene. They include discussions of Eastern as well as Western proposals. In the twentieth century the collapse of time-tested moralities make a search for world order even more imperative than previously.

WAGAR, Warren W (ed). *European Intellectual History Since Darwin And Marx.* NY Harper & Row 1966.

This book is a compilation of essays by Helmut Kuhn and Mikel Dufrenne on existentialism, and by eight other scholars on such subjects as "Darwin and Religion," "Fate and Will in the Marxian Philosophy of History," and "The Origins of Freud's Political Psychology." The introductory essay surveys the dominant conceptions of intellectual history as a discipline and the main threads of thinking in the arts and sciences, in literature, philosophy, and religion, and in political and social organization, during the positivistic first post-Darwinian generation, the neo-romantic second post-Darwinian generation, the disenchanted generation of 1919-1945, and the current "glacial age of the spirit," a generation "which has avoided disillusionment simply because it never allowed itself any illusions at all."

WAGERS, Herndon. *Christian Faith And Philosophical Inquiry.* Lexington KY Col Of The Bible 1961.

The author attempts to construct a "Biblical metaphysics," which starts with the Christian affirmation that "God is love." All of the attributes of the Deity are defined in relation to this central affirmation. God is beyond man's highest thought, He is the ground of all that is and may be, but He has also revealed Himself in terms of human categories, that is, in terms of love. The Biblical metaphysics is an effort to gain a reasoned perspective on the ultimate ground of human existence as such existence is seen and experienced within the context of the Christian faith. The author relates his affirmation to the traditional concepts of Christian faith.

WAGNER, Geoffrey. Wyndham Lewis And The Vorticist Aesthetic. *J Aes Art Crit* 13,1-17 S 54.

WAGNER, Roy. *The Invention Of Culture.* Englewood Cliffs NJ Prentice-Hall 1975.

This work analyzes the concept of culture employed in anthropology. Separate chapters show how these two cultural types differently invent and conceive the self and society. The final chapter shows how anthropology itself distorts tribal and religious cultures by interpreting them as alternative responses to our, rather than their, realities.

WAINWRIGHT, William J. Paul Tillich And Arguments For The Existence Of God. *J Amer Acad Relig* 39,171-185 Je 71.

In the first section I show that one can construct arguments for God's existence from Tillich's remarks which Tillich would be forced to regard as sound. The second section

- considers reasons offered by Tillich for the claim that arguments for the existence of God are always illegitimate. I argue that these reasons are inadequate. The final section considers the notion of a good argument or proof and attempts to show why Tillich could not regard the sound arguments set out in Section I as proofs.
- WAINWRIGHT, William J.** *Stace And Mysticism.* *Journal Of Religion* 50,139-154 Ap 70.
- In *Mysticism and Philosophy*, Stace argues that mystical experiences are neither subjective nor objective, that there is a universal Self with which all (pure) selves are identical, and that because of its unitary character logic applies neither to mystical consciousness nor to the claims which are based upon it. I attempt to show that Stace has failed to establish any of these contentions.

- WALHOUT, Donald.** *Interpreting Religion.* Englewood Cliffs NJ Prentice-Hall 1963.
- This book deals with a selection of religious problems: the nature of religion, truth in religion, the nature of faith, faith and reason, science and religion, the nature of religious language, proofs for God's existence, the nature of sin, immortality, interpretation of the Bible. The author chooses to deal with these selected problems in Religion by the use of 1) a text which poses the problems with suggested solutions, and 2) readings in the general area of the problem. A wide range of viewpoints are represented, and the author reveals his clear-cut philosophical approach to religion, a position which he calls "religious interpretation." He assumes a number of things about religion and articulates them clearly: a) religion is a distinct category not reducible to any other category; b) religion is an "avenue of truth"; c) religion has value in a non-emotive way; and d) religion can be expressed rationally. The author accepts a "neo-orthodox" Protestant religious position, but unlike traditional neo-orthodox theologians, insists that a rational and natural theology is possible.
- WALHOUT, Donald.** A Critical Note On Potter's Interpretation Of Karma. *Phil East West* 16,235-238 Jl-O 66.

- WALHOUT, Donald.** Categories. *Phil Today* 6,60-69 Spr 62.
- WALHOUT, Donald.** Garnett's New Analysis Of Ethical Concepts. *Ethics* 75,132-140 Ja 65.
- A E Garnett's theory of ethics in *Ethics: A Critical Introduction* is a teleological, naturalist theory which makes crucial use of a concept of perfection in its analysis of "ought" and "good." Garnett describes a natural perfection of mankind, i.e., the good of its kind, in terms of the perfection of the general characteristics of voluntary conduct. However, although it is true that the requirements of perfect voluntary conduct are those of partial self-realization, they do not necessarily imply full self-realization as Garnett seems to think.
- WALHOUT, Donald.** In Which Direction Should Philosophy Go? *Personalist* 42,28-37 Wint-Ja 61.
- WALHOUT, Donald.** Is And Ought. *J Phil* 54,42-47 Ja 57.

- WALKER, Edwin Ruthven.** Verification And Probability. *J Phil* 44,97-103 F 47.
- WALKER, Jeremy Desmond Bromhead.** *A Study Of Frege.* Ithaca NY Cornell Univ Pr 1965.
- Frege's theory of functions, concepts, and objects is first studied; then naming and describing are related to predication and thence to concepts; the notion of the sense of words and expressions, and then the notion of truth, especially as picture-truth, is analyzed with their assistance. The last sections view Frege's general idea of the use of language and symbols, the nature of scientific laws, and the nature of numbers. The author sees Frege as tending to shift his interest from logic to ordinary language and so to the problems of expressions in general; this view is reflected in the book itself. The affinities which the author sees with the work of Frege and Wittgenstein is only occasionally treated, but he does make it clear that the *Tractatus* owes much to Frege.
- WALKER, L.** *Feudal Society*, By Marc Bloch. *Hist Theor* 3,247-254 1963.
- WALKER, Marshall.** *The Nature Of Scientific Thought.* Englewood Cliffs NJ Prentice-Hall 1963.
- This book on the philosophy of science covers the range of scientific inference thoroughly: measurement, predictability, model theories, the nature of mathematics, and so on. The author spends much time on the concept of models, pointing out the physical, biological, and social factors affecting models.
- WALKER, Wanda.** *Philosophy Of Education.* NY Philosophical Lib 1963.
- Professor Walker claims that education is "a social process from the cradle to the grave." She uses the categories made famous by Theodore Brameld but uses material from a wider selection of thinkers from Rugg to Brubaker. Philosophical problems are mentioned but not seriously discussed. Consequently, two-thirds of the book is taken up with the usual problems of non-philosophical-oriented professional educators: responsibilities of students, teachers, administrators, and community, educational finances, and curriculum. It is evident that the word "philosophy" is mentioned in the title by courtesy.

- WALLACE, James D.** Pleasure As An End Of Action. *Amer Phil Quart* 3,312-316 O 66.
- My aim in this paper is to describe some of the philosophically important ways in which things done for pleasure differ from things done for certain other reasons. The main contention of this paper is that things done for pleasure are paradigms of "free" acts, but that the same features which make these paradigms of "free" acts also make the agent particularly vulnerable to certain sorts of criticism, should the agent in doing something for pleasure do something wrong. This is so because the very fact that someone does something for pleasure puts a certain range of excuses and justifications beyond his reach, should he be called upon to defend his actions.
- WALLACE, John R.** Goodman, Logic, Induction. *J Phil* 63,310-328 Mr 66.
- Two principles connecting a logical theory with a theory of induction are stated. One concerns the notion of logical equivalence and is a generalization of Hempel's equivalence condition. The other concerns the notion of definition and is intended as an articulation of the idea underlying Goodman's riddle about "grue." When Goodman's theory of projectibility is examined in the light of the principles, several paradoxes emerge, the most striking of which are: (i) for every hypothesis H_1 there is a hypothesis H_2 such that H_1 is eliminable in favor of H_2 and H_1 is not eliminable in favor of H_2 ; (ii) for every hypothesis H_1 there is a hypothesis H_2 such that H_1 is eliminable in favor of H_2 and H_2 is eliminable in favor of H_1 ; (iii) "grue" and "green" enjoy the same degree of entrenchment.
- WALLACE, John R.** Lawlikeness = Truth? *J Phil* 63,780-781 D 66.
- WALLACE, John R.** Sortal Predicates And Quantification. *J Phil* 62,8-13 Ja 65.
- The term 'sortal' is derived from Locke's use of 'sort' in his *Essay*. "That there is an important distinction to be drawn between predicates like 'man', 'horse', 'chair'—i.e., sortal predicates—and others, is recognized by philosophers representing many different points of view." Wallace seeks a formula for distinguishing sortal predicates from others by extracting them (the formulas) from other discussions of sortal predicates, especially that of Geach.

- WALLACE, William A.** *Causality And Scientific Explanation, Vol I: Medieval And Early Classical Science.* Ann Arbor Univ Of Michigan 1972.
- This first volume discusses concepts of causality and scientific explanation from Grosseteste [1175-1253] to Newton. The first chapter sets out the issues and briefly

discusses the contributions of Aristotle and Plato. Chapter II is on Medieval Science at Oxford and discusses Grosseteste and his followers Bacon and Peckham and the Mertonians, William of Ockham, Bradwardine, Heytesbury, Dumbleton and Swineshead. Chapter III discusses the contributions of the Paris school, Albert the Great, Aquinas, Peter of Maricourt, Theodor of Freiberg, Buridan, Albert of Saxony and Oresme. Chapter IV discusses the Paduans, from Paul of Venice to Copernicus. Chapter V treats the founders of classical science, Gilbert, Kepler, Galilei, Harvey and Newton. Wallace's aim is to provide, through historical analysis, a context for discussing current issues concerning the nature of scientific explanation and the nature of scientific truth.

WALLACE, William A. *Causality And Scientific Explanation*, Vol II. Ann Arbor Univ Of Mich Pr 1974.

Short sketches are provided of the main ideas of seven major philosophers of the 17th and 18th century, Descartes to Kant, concentrating on their views on causality. Similar treatment is given of six major methodologists of classical science, Francis Bacon to Claude Bernard. The book also treats philosophers and scientists of the contemporary period who have discussed the idea of causality, both those rejecting the concept and those advocating its legitimacy. The purpose of the author is to promote an "expansion of causal thinking beyond the narrow domain of Humean causation."

WALLACE, William A. *The Role Of Demonstration In Moral Theology: A Study Of Methodology In St Thomas Aquinas*, Vol II. Washington DC Thomist Pr 1962.

Father Wallace offers a study of the logic of moral discourse as practised by Thomas Aquinas and members of the Thomistic school. It is in terms of Aristotelian syllogistic that the discussion is carried on and the bibliography is almost entirely restricted to Scholastic authors. However, the problems faced are often very similar to those treated in British metaethics. These and many similar queries are very thoroughly discussed. Readers who are familiar with the views of J M Ramirez will find that Wallace has a very similar approach to his subject.

WALLRAFF, Charles F. *Karl Jaspers: An Introduction To His Philosophy*. Princeton NJ Princeton Univ Pr 1970.

This first book-length introduction to the 'Existenzphilosophie' concentrates on philosophical topics and approaches which are not particularly technical, e.g., the scientific and the philosophical character of clarity, evidence, feelings and cognition, institutions and professions, freedom and communication. Although some of Jaspers' own books, now available in English in paperback editions, are fine introductions to his philosophy, this volume will be a valuable addition.

WALLRAFF, Charles F. *Philosophical Theory And Psychological Fact: An Attempt At Synthesis*. Tucson Univ Of Arizona Pr 1961.

This attempted synthesis is launched via discussion of theories of immediacy. The first and last two of nine chapters are metaphysical, presenting the negative view that the academic, analytic conception of philosophy is a mistake and the positive view that philosophy is metaphysics. Philosophy or metaphysics is explained to be cosmic interpretation. The author's development of these difficult theses is independent, but often unsatisfying. He indicates an indebtedness to Jaspers, but he omits a discussion of Kant and Husserl whose brilliant development of similar views stands behind both Jaspers and himself.

WALLRAFF, Charles F. *Sense-Datum Theory And Observational Fact: Some Contributions Of Psychology To Epistemology*. *J Phil* 55,20-31 Ja 58.

WALLWORK, Ernest. *Durkheim, Morality And Milieu*. Cambridge Harvard Univ Pr 1972.

Durkheim's sociological theories rest upon philosophical foundations, distinctively

moral, which have not been adequately investigated and appreciated. Guided by the assumptions of dialectical method, neo-naturalism and relationalism, his efforts toward a science of morality included a normative and a meta-ethics. Society as source and standard of and for morality explains the network of values and obligations such as interpersonal sympathy, group loyalty, family, religion, education, occupation, profession, patriotism, state and related aims and ideals.

WALSH, George. *Herbert Marcuse, Philosopher Of The New Left*. *Object* 9, no 9 S 70.

Marcuse's crucial theses are: (1) that there is in the human mind a biologically based archetype of an effortless, tension-free life, which archetype functions as a basic need; (2) that to satisfy this need, or at least alleviate it, an even distribution of the burdens of life is called for; but (3) that this can only be effected by the violent destruction of the present "repressive" individualistic order. Marcuse's theories are wrong, but they are a consistent expression of "the flight from tension syndrome" which is the characteristic New Left sense of life.

WALSH, James J. *Aristotle's Conception Of Moral Weakness*. NY Columbia Univ Pr 1960.

A central philosophic problem both in ancient ethics and in modern is that of choice and decision in relation to reasons and causes. This book examines Aristotle's treatment in E N VII 1-10 in the context of the Socratic denial that one can knowingly choose the less good, and in relation to several recent interpretations of Aristotle's notoriously difficult text. There is a chapter on the development of Plato's treatment of the problem, a detailed analysis of all Aristotle's passages on this and related topics, and a sifting out of the various interpretations that have been proposed. The theory presented is that moral choice involves both appetite and reason in the selection of ends and also in the selection of means; moral weakness is therefore a failure both of knowledge and of desire, and Aristotle is both a cognitivist and a emotivist. The scholar can find the results this book arrives at but the student probably cannot; there should have been a summary exposition. There are excellent notes and a bibliography included with the book.

WALSH, James J. *Buridan And Seneca*. *J Hist Ideas* 27,23-40 Ja-Mr 66.

A study of Buridan's commentary on the *Nicomachean Ethics*, this article considers the question of the extent of Buridan's influence on modern thought. The author examines Buridan's evaluation of ancient philosophers, particularly his opinion of Seneca. Buridan's remarks seem to undermine the belief that the Renaissance began with little historical prelude; rather, it is argued that Buridan presages the Renaissance. By pointing out the importance of Seneca, Buridan emphasizes a non-Aristotelian tradition in moral philosophy that acquires more significance in later history.

WALSH, James J. *Remarks On Thought And Action*. *J Phil* 60,57-64 Ja 63.

One of Stuart Hampshire's aims, in *Thought And Action*, is "to bring the philosophy of mind nearer to moral argument." However, what Hampshire says about action in the two is difficult to bring together; for in the former he seems to defend a subjectivist conception of action, whereas in the latter he moves to an objectivist view. Hampshire's moral doctrine prompts the question how action, whose meaning is said to lie wholly in the thought of the agent, can have a nature and quality discoverable only by disregarding that thought. Hampshire's assertions about art and aesthetics give rise to additional problems of interpretation.

WALSH, Vivian Charles. *The Status Of Welfare Comparisons*. *Phil Sci* 31,149-155 Ap 64.

WALSH, Vivian-Charles. *Scarcity And Evil*. Englewood Cliffs NJ Prentice-Hall 1961.

The economic concept of scarcity is used to clarify the ethical words we use in discussing evils. Abstract moral concepts are related to concrete moral situations. Ascriptions, judgments which both assign responsibility and evaluate, are distinguished from appraisals, judgments which evaluate only. It is claimed that ascriptions are defeasible in the light of circumstances involving scarcity. Thus many things are undeniably regrettable which are not in the least blameworthy. Walsh argues against any attempt to deny the moral importance of scarcity. The goodness of the will cannot be divorced from the limitations in its accomplishments, nor can

one say that such lack of accomplishments is ultimately unreal. Yet, the reality of scarcity does not rule out moral responsibility.

WALTON, Craig (ed) and Anton, John P (ed). *Philosophy And The Civilizing Arts: Essays Presented To Harbert W Schneider*. Athens Ohio Univ Pr 1974.

Following the editorial preface and a brief autobiographical sketch of Schneider, the third section offers four essays in ancient philosophy. There follows a section of studies in social theory. The closing section of essays are by Professor Schneider.

WALTON, Craig. "Hume And Jefferson On The Uses Of History" in *Philosophy And The Civilizing Arts*, Craig Walton And John P Anton (eds), 103-125. Athens Ohio Univ Pr 1974.

Though Jefferson is normally lauded as the "Champion of the Free Mind," one of several instances of his attempts to censor books is here explored to attempt to go beyond the view that such instances were only slips or uncharacteristic acts: Jefferson's campaign against Hume's History of England, included efforts to publish Baxter's "exurgation" of Hume. Close analysis of Baxter's History and of Jefferson's reasons for preferring it, lead to the hypothesis that it was not moral "lapses" but a conflicting version of the Enlightenment science of man and politics which underlies Jefferson's action. The uses of history theme serve to illustrate these too, at least partially conflicting, enlightenments.

WALTON, Craig. "The *Philosophia Prima* Of Thomas Hobbes" in *Thomas Hobbes In His Time*, Ralph Ross And Others (eds), 31-41. Minneapolis, 1975.

This study of Hobbes's 1655 *De corpore* first places Hobbes's logic in relation to that of Ramus, then indicates what in Aristotle, the "Schoolmen" of his own day, and of Descartes, Hobbes undertook to critique. The bulk of the study argues from the texts that Hobbes's central concepts of body, endeavour, cause-as-multilateral, and ACT as an interdependent and mutually-constitutive event, all lay a groundwork for fruitful analyses of final causes and purposive action within and among bodies biological, political and social, as well as spiritual. It is incident to this that the analysis shows why and how Hobbes cannot be seen as a materialist, mechanist or ontological dualist.

WAND, Bernard. The Content And Function Of Conscience. *J Phil* 58,765-772 N 61.

This paper criticizes two interpretations of the nature of conscience: C D Broad's intellectualist account, which focuses on the content of conscience, and Gilbert Ryle's pragmatic account, which stresses the function of conscience. On Broad's view, one cannot explicate the sense of 'ought' which is expressed by the sentence 'A person ought always to obey his conscience'. On Ryle's view, which identifies conscience and conscientious action, one cannot explain the role of conscience as a reason for acting. A complete description of conscience must preserve both the intellectual content and the practical function of conscience. This is possible if one recognizes that, in appealing to conscience, a person, by that very appeal, is committing himself to act morally.

WARNOCK, G. *Contemporary Moral Philosophy.* NY St Martin's Pr 1967.

This study offers a critical discussion of intuitionism (Moore, Prichard and Ross), emotivism (Ayer and Stevenson) and prescriptivism (Hare).... The author proceeds to argue that all these types of theory err in being excessively formalistic, and that greater centrality must be assigned to the content of moral thought, and to the consideration of human needs and satisfaction. There follows a discussion of naturalism in connection with the issues of moral reasons and moral arguments. There is a bibliography included at the end of the book.

WARNOCK, Mary. *Existential Ethics.* NY St Martin's Pr 1967.

This essay examines the philosophical mood in which the main existentialist writers approach ethical topics. Although these philosophers do not, on the whole, sharply distinguish between ethics and the rest of philosophy, the preoccupation with the basic ethical question "How ought man to live?" is seen as their common pursuit. Brief chapters on Kierkegaard and Heidegger are followed by a more detailed account of Sartre's position, which also receives more detailed criticism, since, in the author's opinion, it exemplifies most clearly the moral 'tone of voice' which, rather than any systematic assumption or execution of argument, constitutes existentialist ethics.

WARNOCK, Mary. *Imagination.* Berkeley Univ Of Calif Pr 1976.

Through an examination of imagination in the writings of Hume, Kant, Coleridge, Wordsworth, Sartre and Wittgenstein, the author concludes that the imagination ascribes meaning to things and interprets experience in unfamiliar and mysterious ways. Hume and Kant describe the role of the imagination as that of forming images both in the presence and in the absence of objects. In Wordsworth these functions coincide and the image is construed as something that generates feeling and value. The theories of Sartre and Wittgenstein result in the view that the images of the imagination are our way of thinking about the world. Thus the author argues that educational policy should encourage the cultivation of the imagination since it determines our awareness of the world and the values we attribute to it.

WARREN, W P. *Masaryk's Democracy: A Philosophy Of Scientific And Moral Culture.* Chapel Hill Univ N Carolina Pr 1941.

Masaryk's philosophy is largely an adaptation of earlier theories to the political and social problems of his time. His theory of democracy attempts to reconcile freedom with authority in terms of a functional Platonism mellowed with Kant. His philosophy is a scientifically critical constructive realism activated by a firm belief in the absoluteness of moral and cultural values. Masaryk's aim was to create an ideology adequate for life in democracy, a culturally valid *modus vivendi* orientated by an "ideational perspective" superior to that of the present masters of Czechoslovakia and part of the ideological backdrop to the present world struggle.

WARREN, W Preston. The Mote In The Eye Of The Critic Of Critical Realism. *Phil Phenomenol Res* 26,35–50 S 65.

In his "Story of American Realism," William P Montague recognizes six "unofficial" realists of whom he takes no further note. Yet all had published distinctive realistic writings. Some of these were significantly relevant to the epistemology of critical realism, which Montague asserted was simply a reformulation of "the epistemological dualism... explicit in Locke and Descartes, and implicit in Hobbes, Spinoza..." though Santayana's concepts of essence and animal faith expressed an original effort to go beyond Lockean epistemology. This attribution of dualism is challenged particularly with reference to the biologically oriented, referential realism of R W Sellars, but also on behalf of the pragmatic element in Santayana and the intentionalist component in the realisms of Lovejoy and Pratt. Neither this pragmatism nor this intentionalism, however, has a clear basis. Sellars' realism has such a basis, but it is nonetheless open to complementation by the work of Macintosh and Boodin.

WARTOFSKY, Marx W. *Conceptual Foundations Of Scientific Thought: An Introduction To The Philosophy Of Science.* NY Macmillan 1968.

This study is an introduction to philosophy of science. Its main divisions are (1) The Genesis of Scientific Thought, (2) The Methods of Science, (3) Some Fundamental Concepts in the Sciences, and (4) Science, Values, and the Humanistic Understanding. Four appendices deal with the concept of motion from Aristotle to Galileo, some developments of Greek science after Aristotle, logical notation, and bibliographical notes. The last covers fifty pages of closely-packed sources, nearly all published in the last thirty years. Many sources from a realistic rather than phenomenalist point of view are listed, which are often overlooked in Anglo-American accounts of philosophy. The breadth of the book is unusual.

WARTOFSKY, Marx W. Temporal Description And The Ontological Status Of Judgment, Part I. *Rev Metaph* 14,18–47 S 60.

The author argues that judgment must be seen both as caused product and as causative event. Examining Moore's views on "The Nature of Judgment" (1889), he first criticizes the "fallacy of the ultimate given." He then discusses Roy Wood Sellars's and Justus Buchler's positions on the causal category in human agency and explains his conception of the temporal bidimensionality of judgment. After considering Mead and Lewis on the predictive function of judgment and Ayer on temporal relations among events, the author presents his own ideas on dispositional judgments, simultaneity, and succession. Finally, focusing on historical judgment, he closes with remarks on facts and values.

WASS, Meldon C. *The Infinite God And The Summa Fratr Alexandri.* Chicago 1964. A study of the *Summa fratris Alexandri*, a work attributed to Alexander of Hales (but more probably the work of Alexander's disciples in the Paris monastery 1230–1245), which deals especially with the concept of infinity. The author concentrates on the Christian's use of infinity as an intrinsic and essential perfection of the divine essence. He argues that, although the *Summa fratris Alexandri* is a "mosaic" of the theological opinions of a whole school of thinkers in Paris, and in spite of Aristotle's recent impact upon theology (by way of Avicenna), the concept of infinity presented is a fairly consistent one. Wass says that the *Summa* considered infinity as a perfection (not an imperfection as with Aristotle), belonging properly to God. He further maintains that this work (*Summa*) attempts to give "a complete and comprehensive presentation of all theological questions in a systematic way." And as such, it served as a model for the later *Summas* of Albert, Aquinas and the later Scholastics.

WASSERMAN, Earl R (ed). *Aspects Of The Eighteenth Century.* Baltimore Johns Hopkins Pr 1965.

This book contains thirteen essays dealing with such subjects as: Herder and the Enlightenment, Diderot and Historical Painting, 18th Century Music, the Poetry of Pope, Vegetation Symbols in Goethe's *Faust* and Divergent Loyalties to Newton.

WASSERSTEIN, A. Some Early Greek Attempts To Square The Circle. *Phronesis* 4,92–100 1959.

WASSERSTROM, Richard A. *The Judicial Decision: Toward A Theory Of Legal Justification.* Stanford CA Stanford Univ Pr 1961.

A critical analysis and evaluation of recent legal philosophies in terms of their contributions to a solution of the question of the desirable procedure for adjudication. As against the deductivism of appeal to the rule of *stare decisis* and the intuitionism of appeal to equity in the particular case, the writer urges a "two-level" procedure of justification: deducibility from some legal rule is a necessary (but not sufficient) condition of justification, and the rule itself must be shown to be conducive to the production of socially desirable consequences.

WASSERSTROM, Richard A. Disobeying The Law. *J Phil* 58,641–652 O 61.

The author casts doubt upon three arguments which seem to support the assertion that disobedience of the law is never justified: (1) that there is something logically odd about asking why one ought to obey the law, (2) that disobedience of the law can be readily seen to be unjustified once the question "But what if everyone did that?" is

- posed, and (3) that an act of disobedience is not justified unless the entire logical system can be shown to be undesirable.
- WASSERSTROM, Richard.** Rights, Human Rights, And Racial Discrimination. *J Phil* 61,628-640 O 64.
- Wasserstrom attempts to delineate schematically the form of one set of arguments for "natural or human rights" by (1) considering certain important and distinctive features and functions of rights in general, (2) describing and defining characteristics of human rights and certain specific functions and attributes they have, (3) delineating and evaluating one kind of argument for human rights as so described and defined, and (4) analyzing one particular case of a denial of human rights—that produced by the system of racial discrimination as it exists in the South today.

- WATON, Harry.** *A True Monistic Philosophy: Comprehending The Absolute, God, Existence, Man, Society And History.* NY 1947.
- Mr Waton tells us that a true idea has a historic destiny to realize itself in material form and such destiny "overrides and overrules all plans, schemes and plots of men." Our author maintains that "good and evil are correlatives, neither can exist without the other, and each grows and develops in proportion as the other grows and develops." He then counsels unquestioning acceptance of human destiny as determined by God and conceived by Marx, and says that "man should be grateful that God uses him to realize his own purposes." As for the individual himself, "there is no salvation for any individual human being without salvation for all of mankind."

- WATTS, Alan W.** *Nature, Man, And Woman.* NY Pantheon Books 1958.
- This book is a protest against the excesses of Western, Christian, urban thought, particularly as regards the radical separation of man from nature. The virtues of man's reentrance into the whole of nature, as exemplified in Oriental philosophies in general and Zen Buddhism in particular, are set forth. And the conclusion suggests the application of the principles of Zen to sexual relations, as a means of overcoming the isolation of man from his fellows and thus as a step toward overcoming the isolation of man from the rest of the universe.
- WATTS, Alan W.** *The Meaning Of Happiness: The Quest For Freedom Of The Spirit In Modern Psychology And The Wisdom Of The East.* NY Harper 1940.
- Happiness is neither achieved by changing our environment nor by changing ourselves. It is rather gained by realizing that one already has it and by clearing away the hindrance to its enjoyment.
- WATTS, Alan W.** *This Is IT And Other Essays On Zen And Spiritual Experience.* NY Pantheon Books 1960.
- The six essays in this volume have a common focus: "the spiritual or mystical experience and its relation to ordinary material life." But the author also emphasizes that the spiritual cannot be separated from the material, nor the wonderful from the ordinary. The "IT" of the title is "the entire and ultimate point for the existence of a universe" and is not separable from everyday and immediate experience.
- WATTS, Alan Wilson.** *Behold The Spirit, A Study In The Necessity Of Mystical Religion.* NY Pantheon Books 1947.
- WATTS, Alan Wilson.** *Supreme Identity: An Essay On Oriental Metaphysic And The Christian Religion.* NY Noonday Pr 1957.
- "In practice," writes the author, "our religious and educational institutions are providing neither the wisdom nor the power to cope with the political, economic and psychological predicament in which we find ourselves." Neither, he continues, does much to give man the consciousness that the deepest center or "ground" of his being is that eternal Reality which, in the West, is called God. Yet from this realization comes the serenity and spiritual power necessary for a stable and creative society.

- WAX, Muray (ed)** and Churchman, C West (ed) and Ackoff, Russell L (ed). *Measurement Of Consumer Interest.* Philadelphia Univ Of Penn Pr 1947.
- This book is an attempt upon the part of a group of philosophers to put into practice what they have been preaching. It sets out to show that philosophy should immediately undertake an important role in science. It should act as a coordinator of research in the sense that it supplies general criteria for the adequacy of an experimental investigation. The new role of philosophy is that of a critique of experimental techniques; it attempts to define the most general conditions under which a procedure is said to be experimental, a process is said to be in experimental control, a question is said to have meaning.
- WAYMAN, Alex.** *The Buddhist Tantras; Light On Indo-Tibetan Esotericism.* NY Weiser 1973.
- In an introductory section the author, after touching upon some methodological questions, discusses, with interesting references, the early literary history of Buddhist tantrism, the beginning of the tantric tradition, and the nature of Buddhist esotericism. The second section considers the foundation of the Buddhist Tantras. It also includes, among others, chapters on ritual, and interpretations of the symbolism of the Tibetan mandala. A final section, Special Studies, deals with such esoteric subjects as the 9 orifices of the body, the inner Zodiac, female energy, and the five-fold ritual symbolism of passion.

- WEAKLAND, John Hasl.** Method In Cultural Anthropology. *Phil Sci* 18,55-69 Ja 51.
- WEAVER, Richard M.** *Ideas Have Consequences.* Chicago Univ Of Chicago Pr 1948.
- In this criticism of our civilization, Mr Weaver protests against the prevailing attitude of indifference toward ideas at work. They do matter, because they have practical consequences; they often matter more than facts. Apart from recognition of this truth, even the best ideas—such as democracy, freedom, progress—will not work, will not remain healthy, enduring, victorious. The only thing that can be done about it is for all of us to learn to be serious and rational about the use of ideas.
- WEAVER, Richard M.** *The Ethics Of Rhetoric.* Chicago Regnery 1953.
- WEAVER, Richard M.** *Visions Of Order: The Cultural Crisis Of Our Time.* Baton Rouge 1964.
- The author defines a "philosophical" conservative as a critic of the official egalitarian creed. Whereas the commonly held view is that class stratification is inimical to justice and freedom, Weaver claims there should be social classes. Unless men fit into a hierarchy, they cannot live in justice and freedom. The issue is whether one ought to subordinate lower to higher, if indeed one can so rank men. Weaver's argument, when not autobiographical (he is an ex-Socialist) rests upon metaphysics, psychology, and rhetoric. The metaphysical argument appeals to "a deep-laid order of things." The psychological argument claims the priority of "the inner order of the soul" to "the outer order of society." The rhetorical argument is that radicals disorder language whereas conservatives preserve well-ordered persuasion.

- WEBB, C W.** Could Time Flow: If So, How Fast? *J Phil* 57,357-364 My 60.
The author sets out to show that statements about the flowing of time, and the rate of flow of time, can, and probably usually do, have a literal, defensible, and easily understandable meaning. The critic of flowing time says that if time flows, we ought to be able to ask how fast it flows. The author finds this question meaningful and answerable: the time measured by any clock can be said to flow relative to the time of some other clock.

- WEINBERG, Julius R.** *A Short History Of Medieval Philosophy.* Princeton NJ Princeton Univ Pr 1964.
One of the main points of this book is to show that philosophy was a vital activity from the first to the fifteen century not merely in spite of but also because of the religious traditions in which it developed. Aside from an informative introduction, the book includes chapters on St Augustine, Pseudo-Dionysius and John Scotus Eriugena, St Anselm, Abelard, the Islamic Middle Ages, the philosophy of the Jews during this period, philosophy in the thirteenth century Christianity, St Thomas, Duns Scotus, William of Ockham, the critical tendencies of the fourteenth century, and a final chapter bringing together highlights and conclusions. The themes which the book treats as running through the periods of medieval philosophy are the debates on faith/reason, the sources of knowledge and the nature of universals, the nature of the soul, and the problem of immortality.
- WEINBERG, Julius R.** *Abstraction, Relation And Induction: Three Essays In The History Of Thought.* Madison 1965.
This book consists of three essays in which Weinberg traces the origins in ancient and medieval philosophy of certain modern philosophic views. "The Nominalism of Berkeley and Hume" is concerned primarily with Berkeley's and Hume's attacks on explanations of abstract ideas that were given by many medieval philosophers as well as by Descartes and Locke. Weinberg shows that the best arguments of Berkeley and Hume are those which discover a contradiction in the doctrines of abstract ideas. In "The Concept of Relation: Some Observations of Its History," Weinberg starts with the view of relations held by the Eleatics, proceeds through the views of Plato, Aristotle, the Stoics, Epicureans, Neoplatonists, medieval philosophers (both Arabic and Christian), and modern philosophers, and concludes with a brief statement of what he takes to be the correct account. "Historical Remarks on Some Medieval Views of Induction" discusses the elaborations by Arabic and Christian philosophers of Aristotle's remarks on induction.
- WEINBERG, Julius R.** *Cogito, Ergo Sum: Some Reflections On Mr Hintikka's Article.* *Phil Rev* 71,483-491 O 62.
Weinberg attacks Hintikka's interpretation of Descartes ("Cogito, Ergo Sum: Inference or Performance," *Philosophical Review*, Volume 71, Pages 3-32). Weinberg insists that Descartes did regard *cogito, ergo sum* as an inference, though not a syllogism; and he offers three Cartesian doctrines to support his interpretation: 1) the mind knows itself directly, 2) existence is a property and a simple nature or notion, and 3) there are necessary connections between simple natures or notions.

- WEINBERG, Julius.** The Idea Of Causal Efficacy. *J Phil* 47,397-406 Jl 50.
An examination of the idea of causal efficacy is taken up by the author because of recent interest in this theory as an adequate means of explaining concepts of natural science which are analogues to real essences. The author answers criticisms of Hume's positive theory of causal belief and attacks the view that knowledge of causes gives some indications of the character of their effects. The conclusion states that grounds for reintroduction of the idea of causal efficacy appear to be insufficient.

- WEINGARTNER, Paul.** Problems And Requirements In Theory Rendering. *Phil Phenomenol Res* 25,85-95 S 64.
The article tries to give an answer to the question: "How can we select the important and significant statements of a doctrine or theory?" This is done by two definitions according to which one can distinguish two senses of the expression "important and significant statement of a doctrine of theory": (1) The statement in question has a high logical content and therefore a low degree of probability. (2) The statement has a high empirical content and also a low degree of probability; i.e., there is a large class of self-consistent, singular existential statements of the form "there is a so and so in the space-time region k!" which are forbidden by the statement in question, i.e., with which it is inconsistent.
- WEINGARTNER, Rudolph H.** *Experience And Culture, The Philosophy Of Georg Simmel.* Middletown CT Wesleyan Univ Pr 1962.
Simmel developed first his *Kulturphilosophie* and later his *Lebensphilosophie*, but a single philosophic position runs through all his work and this is exhibited here. His *Lebensphilosophie* is elaborated under the categories of life as more-life and more-than-life, content and form, freedom, the *a priori*, and the tragic conflict between individual development and the logic of objective cultural forms thrown up

by human life in process. The numerous elements in Simmel's eclectic system are isolated and related, and his *Lebensphilosophie* is largely illustrated in two cultural domains, history and philosophy. Simmel is significant as a transitional figure between German idealism and 20th century existentialism, e.g., philosophy is seen as a system expressive of the need of the individual (who is culturally differentiated) for unity, and expressive of personal attitude.

WEINGARTNER, Rudolph H. *The Unity Of The Platonic Dialogue: The Cratylus, The Protagoras, The Parmenides.* Indianapolis Bobbs-Merrill 1973.

This work comprises three essays whose tie to each other is that each proposes an interpretation of a Platonic dialogue which both depends upon and displays the 'unity' of that dialogue. This unity consists in each dialogue having a theme which "unifies the work and renders it a whole and... makes intelligible its component parts—speeches, arguments, characterizations—in relation to each other." The dialogues are the *Cratylus*, the *Protagoras*, and the first half of the *Parmenides*.

WEINGARTNER, Rudolph H. Explanations And Their Justifications. *Phil Sci* 28,300–305 J1 61.

WEINGARTNER, Rudolph H. The Quarrel About Historical Explanation. *J Phil* 58,29–44 Ja 61.

The author examines the controversy arising from Carl Hempel's paper "The Function of General Laws in History." He contends that what appears to be a dispute about the precise nature of historical explanation is in fact the product of a disagreement about the nature of philosophic method. For instance, the anti-Hempelians object to Hempel's proposal because historians do, as a matter of fact, successfully explain many events using methods quite different from those recommended by Hempel. The anti-Hempelians method, however, the author argues, leads to taxonomy; it precludes philosophy's playing a systematic role.

WEISKE, Thomas. *The Romantic Sublime: Studies In The Structure And Psychology Of Transcendence.* Baltimore Johns Hopkins Pr 1975.

This study is an analysis of the sublime in terms of the dialectical opposition of its negative and positive forms. The negative or metaphorical sublime of Kant and Burke endorses human limitations and an ethos of alienation; while the positive or egotistical sublime of Wordsworth, Keats and Shelley suggests immanence and resists alienation: the author employs these distinctions in his historical study, which integrates psychoanalytic, semiotic and structuralist themes, to render new interpretations of the poetry of William Collins, Wordsworth, Blake and Keats.

WEISS, Paul And Others. Real Possibility: A Colloquium. *Rev Metaph* 8,669–684 Je 55.

WEISS, Paul. *Beyond All Appearances.* Carbondale S Illinois Univ Pr 1974.

Part One examines the depth vectors that move us to inquire. Part Two is devoted to a scrutiny of the finalities toward which contexts and actualities point. In Part Three, the distinctive role of man is stressed as following the leads of appearances and the relations among finalities. Equivalently, this becomes a study of the ideal factor: our recognition of self-identity and obligation, and our responses along the value spectrum in an improvable, civilizable world.

WEISS, Paul. Existenz And Hegel. *Phil Phenomenol Res* 8,206–216 D 47.

WEISS, Paul. *History: Written And Lived.* Carbondale S Illinois Univ Pr 1962.

The author states that "A philosophy of history is a distinctive inquiry, with its own methods, rationals, criteria and achievements." He divides his study into two parts: the first comparing history and science and then dealing with "the problems which are raised by any attempt to know the past and to communicate what one knows" and the second dealing with "the world which the historian presupposes." The second part "points up the fact that that world has a being, a structure and a career different from that possessed by any other." The author relates this book to his previous book *Modes Of Being* as an empirically oriented study "revealing the experienceable significance of (one of the) realities which the systematic study isolated."

WEISS, Paul. *Man's Freedom.* New Haven Yale Univ Pr 1950.

The book is divided into three parts. The first, entitled "Society and the Freedom of Preference," examines human activity as in and of nature but unfolding its boundless range of higher capacities. The second part of the book, "Absolute Morality, Choice, and Law, is a critical study of ethical alternatives. In preference to several proposed basic principles, which he examines, the author settles on the Golden Rule as the most effective. The third part, "The Creative Will," is fruitful reading. Weiss seeks a primary ethical principle and explores the natural ways of its realization in human lives.

WEISS, Paul. *Modes Of Being.* Carbondale S Illinois Univ Pr 1958.

A study bringing to systematic improvement and completion *Reality* (1939), *Nature and Man* (1947), and *Man's Freedom* (1950). Actuality, Ideality, Existence, and God are the irreducible modes of being which affect and complement each other. Actualities energize in the field of Existence toward Ideality (the Good), and God is the unity in which Existence, Actuality, and the Good are sustained. All four modes are indispensable "data for one another," and play independent but mutually qualifying and supporting roles in the interlocking totality of Being.

WEISS, Paul. *Nature And Man.* NY Holt 1947.

WEISS, Paul. *Nine Basic Arts.* Carbondale S Illinois Univ Pr 1961.

A companion volume to the author's *The World Of Art*, this book examines the makings and products characteristic of the long-established individual arts. After a short introduction, which discusses the ways of classifying the arts and quotes with comment the opinions of artists on what the various arts are fundamentally concerned with, the chapters move through the following art forms, discussing each: Architecture, Sculpture, Painting, Music, Story, Poetry, Music, The Theatre, The Dance, Some Compound Arts. A great deal of attention is given to the nature of space and time, of story and poetic form, in order to interpret the arts in their philosophical setting. This might be considered a philosophy of the individual arts.

WEISS, Paul. *Our Public Life.* Bloomington Indiana Univ Pr 1959.

In a very readable book Weiss presents a political philosophy which escapes easy categorization, for he at once believes in natural, social and positive law, laws of nature, and Laws of Civilization, all of which, he claims, are necessary ingredients of our public life. Weiss is concerned not only with the function of existing laws, but also with laws which ought to be recognized if certain goals of societies are accepted. A systematic treatment of political entities in which both individuals and groups find a role.

WEISS, Paul. *Philosophy In Process, V1: 1955–1960.* Carbondale S Illinois Univ Pr 1966.

In Weiss' book one prominent topic is symbolization. Weiss also refines the relations between powers and contexts. He criticizes the analogy between the perceptual factors in knowledge and ourselves and other social objects.

WEISS, Paul. *Philosophy In Process, V2: 1960–1964.* NY Feffer & Simons 1966.

WEISS, Paul. *Philosophy In Process, V5.* Carbondale S Illinois Univ Pr 1971.

This fifth volume of *Philosophy In Process*, containing journal entries from 1965 to 1968, offers Weiss' reflections on a variety of subjects ranging from God and religion to sex and games. The book is notable not only because it covers a wide range of traditional philosophic problems but also because of its treatment of topics not ordinarily studied by philosophers. However, much of the discussion is couched in the technical vocabulary of *Modes Of Being* and would present difficulties for anyone not already familiar with Weiss' work.

WEISS, Paul. *Philosophy In Process.* Carbondale S Illinois Univ Pr 1964.

Weiss has recorded day by day the thoughts that pass through his mind for an hour or so during the morning. Fascicle 4 is the publication of these recorded thoughts, beginning toward the end of a sentence in the last third of the entry for June 21, 1957,

and ending in the middle of a sentence in the middle of the entry for August 12, 1957. This fascicle reveals Weiss's thinking about the four modes: actuality, ideality, existence and God, presented in his *Modes of Being*, and about their togetherness. It also contains an informative passage on the composition of *Philosophy in Process* in which Weiss considers this work to be "an exhibition of an effort at 'open thinking'."

WEISS, Paul. *Religion And Art.* Milwaukee Marquette Univ Pr 1963.

In this extended lecture, Paul Weiss develops some of the religious implications of his esthetic (see his *Nine Basic Arts*, 1961). Architecture, sculpture and painting (all portraying space)—musical composition, story and poetry (creating time)—musical performance, theatre and dance (re-presenting process)—all nine arts are capable of religious orientation. The lecture abounds in highly personal insights and aphorisms. One example: "Religion is not a light matter. It can do irreparable harm." To balance this: "If we wish to reach God we can do nothing better than be religious. If we wish to grasp the nature of God as mediated by Existence, we must practice a religious art."

WEISS, Paul. *Sport: A Philosophic Inquiry.* Carbondale S Illinois Univ Pr 1969.

"Excellence," P Weiss writes, "excites and awes. It pleases and it challenges. It is what ought to be." This is why sport commands the extraordinary allegiance of so many members of the public. As to the athletes themselves, sport offers them, Weiss observes, "the most promising means for becoming excellent." This unique study of sport by a metaphysician affords many insights on the challenge of the body; the interrelations of sport with play and with the phenomenon of the game; the urge to win; the athlete as a man of action; the athlete's submission to stringent rules; and his dedication to the ideal of a superb performance.

WEISS, Paul. *The God We Seek.* Carbondale S Illinois Univ Pr 1964.

This book, one of a series of works in which Weiss expounds his original system of philosophy, has as its major topic "the experience and concern with God in privacy and in a community." Divided into three parts: 1) Experience, 2) The Sacred, and 3) The Quest, this book builds on Weiss's earlier works, in which God is considered speculatively as a mode of Being, and proceeds to explore the ways man establishes contact with God.

WEISS, Paul. *The Making Of Men.* Carbondale S Illinois Univ Pr 1967.

WEISS, Paul. *The World Of Art.* Carbondale S Illinois Univ Pr 1961.

This work aims to uncover the general principles and problems of art, and the special characteristics of its activities and products as they contrast with other enterprises. Philosophic concepts grasp actuality; mathematics and ethics grasp the ideal; worship grasps God. But the artist helps us to grasp the texture of existence. The author maintains that art is to equal to and at times superior to ethics, politics, religion, philosophy, and science. In a chapter on science and art, he attempts to demonstrate that the artist, like the scientist, reveals truth, and that, in fact, the artist is more of an experimenter than the scientist. An art product is unique, ideally complete, and existentially insistent, self-sufficient, final, an emotive creation of a new space, a new time, a new becoming in sensuous embodiment. An art object has 4 distinct modes of determination: actually compositional, existentially situational, ideally representative, and unitary accretive.

WEISS, Paul. *Historic Time.* *Rev Metaph* 15,573-585 Je 62.

The author examines five paradoxical aspects of the historical present: First, the historic present is extended; second, it has three distinctive boundaries and magnitudes; third, in the present there are concurrent events, some of which are completed earlier than others; fourth, the sequence of present occurrences apparently precludes the existence of a single present embracing them all; fifth, since the past is not, there seems to be no series for which the present would be a last term. This paper has been reprinted as a chapter of the author's *History: Written and Lived* (Carbondale, Illinois, 1962).

WEISS, Paul. *History And Historian.* *J Phil* 42,169-179 Mr 45.

WEISS, Paul. *Immortality.* *Rev Metaph* 1,87-103 Je 48.

WEISS, Paul. *Man's Existence.* *Int Phil Quart* 1,547-568 D 61.

WEISS, Paul. *Our Knowledge Of What Is Real.* *Rev Metaph* 18,3-22 S 64.

The "identity theory of knowledge" maintains that the contents of knowledge (images, ideas, etc.) and the known (sensa, structures, etc.) are identical in nature; epistemological dualism sharply distinguishes them. The author discusses these views

and proposes a "functional identity theory of knowledge" which recognizes that identical contents may have different roles in different contexts. He then discusses the non-philosophical notion of knowledge as communally shared opinion, comments on the experiential knowledge of reality, enumerates eight operations involving perception and intelligible structures, and considers the interrelated concepts of objectivity, texture, design, force, and field.

WEISS, Paul. *Pain And Pleasure.* *Phil Phenomenol Res* 3,137-144 D 42.

WEISS, Paul. *Religious Experience.* *Rev Metaph* 17,3-17 S 63.

After briefly considering the differences among the ethical, the aesthetic, and the religious, the author discusses feelings often confused with religious experience and comments on the relationship between faith, religious affirmation, and religious experience. He then examines religious experience in its relation to the secular world. He concludes with a discussion of God as privately encountered in religious experience.

WEISS, Paul. *Sacrifice And Self-Sacrifice.* *Rev Metaph* 2,76-98 Mr 49.

WEISS, Paul. *Social, Legal, And Ethical Responsibility.* *Ethics* 57,259-273 Jl 47.

WEISS, Paul. *Ten Theses Relating To Existence.* *Rev Metaph* 10,401-411 Mr 57.

WEISS, Paul. *The Contemporary World.* *Rev Metaph* 6,525-538 Je 53.

WEISS, Paul. *The Elements Of The Physical Universe.* *Rev Metaph* 15,3-18 S 61.

After noting that the world known to science is the world of common sense bodies made intelligible, coherent, systematic, and abstract, the author examines the meanings of the expression "physical universe" and enumerates the conceptual movements of reflective philosophy by which one can pass from observed quantitative and qualitative features to the beings which make those features possible. He then discusses features as relations among objects and as boundary characters or summaries of the natures of beings themselves. The author concludes with comments on the objectives and methods of philosophy and science.

WEISS, Paul. *The Paradox Of Obligation.* *J Phil* 55,291-292 Mr 58.

WEISS, Paul. *The Past; Its Nature And Reality.* *Rev Metaph* 5,507-522 Je 52.

WEISS, Paul. *The Past: Some Recent Discussions.* *Rev Metaph* 7,299-306 D 53.

WEISS, Paul. *The Perception Of Stars.* *Rev Metaph* 6,233-238 D 52.

WEISS, Paul. *The Purpose Of Purpose.* *Phil Sci* 9,162-165 Ap 42.

WEISS, Paul. *The Quest For Certainty.* *Phil Rev* 55,132-151 Mr 46.

WEISS, Paul. *The Real Art Object.* *Phil Phenomenol Res* 16,341-352 Mr 56.

WEISS, Paul. *The Semantics Of Truth Today And Tomorrow.* *Phil Stud* 9,21-23 1958.

The author goes into the semantical definition of truth contending that the phrase "is true" refers to a correlation, requiring not only 'p' but the determinate fact that p—the assertion and that of which the assertion claims to be about. He argues that it is an error to suppose that expressions about future contingent occurrences are semantically determinate and that this error is avoidable if non-truth functional wholes relating to the future are understood to have components which do not claim to refer to such correlates.

WEISS, Paul. *The Social Character Of Gestures.* *Phil Rev* 52,182-186 Mr 43.

WEISS, Paul. *The Universal Ethical Standard.* *Ethics* 56,39-48 O 45.

WEISS, Paul. *The Use Of Ideas.* *Rev Metaph* 17,200-204 D 63.

The author discerns and examines six steps in the imposition of ideas upon experienced content. Those steps include the readiness or openness of concepts to content, their extralinguistic reference, their introduction into a new context, the bestowal of demanding concepts upon recalcitrant content, the resulting struggle and unification of idea and experience, and the subject's ultimate possession of the content thus mastered. The author then briefly compares his position to the views of analytic and existential philosophers and comments on the use of religious concepts.

WEISS, Paul. *Toward Unity Of Culture: A Program For A Program.* *Zygon* 2,223-230 S 67.

WEISS, Paul. *Twenty-Two Reasons For Continuing As Before.* *Phil Stud* 13,65-67 1962.

WEISSKOPF, Walter A. *Economic Growth Versus Existential Balance.* *Ethics* 75,77-86 Ja 65.

Continuous economic growth is incompatible with human needs on several levels or with an "existential balance" in life. The value system which supports the idea of indefinite growth must create in people a "need" for change. Alfred Marshall perceives that there is a hierarchy of human needs and that "... need satisfaction which continuously increases the supply of means along one level and neglects needs on a different level is contrary to human well-being. What is required is a balanced system of need satisfaction on various levels." This system would be a "balance of existence."

WEISSKOPF, Walter A. *Hidden Value Conflicts In Economic Thought.* *Ethics* 61,195-204 Ap 51.

WEISSKOPF, Walter A. *The Ethical Role Of Psychodynamics.* *Ethics* 62,184-190 Ap 52.

WEISSMAN, David. *Dispositional Properties.* Carbondale S Illinois Univ Pr 1965.

Weissman argues that dispositional properties also are genuine and irreducible elements of the world. Both minds and physical objects are characterized by these properties. Weissman uses a principle that he claims is taken from Kant: "this principle directs us to accept some aspect of experience as given, and to account for this aspect by isolating the categorical factors in thought or in being which are its necessary conditions." In applying this principle, Weissman argues that causes really produce their effects—a necessary connection joins causal conditions to their effects. And causality would not be possible unless there were dispositional properties. Weissman develops his own view by contrasting it to opposing views. The first opposing view that he considers is Hume's. After considering Hume, Weissman turns his attention to some modern accounts of counterfactual conditionals. The two philosophers he discusses are Carnap and Braithwaite. The book concludes with a characterization of dispositional properties.

WEISSMANN, Asriel. The Meaning Of Identity. *Phil Phenomenol Res* 16,461–475 Je 56.

WEISSMANN, Hans Asriel. "Freedom" In Ethics—A Transcausal Concept. *Phil Phenomenol Res* 19,341–353 Mr 59.

The purpose of the article is to show that the undetermined factors of chance are not able to vindicate that man has freedom of decision. By dismissing the assumption that nature is totally caused, we do not open the possibility of giving a foundation to freedom of the will. Freedom does not describe a part of reality, but presupposes consciousness and self-control—all properties which have nothing to do with chance. The author concludes that the Kantian transcendental method has lasting importance in a time which abandons physical determinism.

WEISWURM, Alcun A. *The Nature Of Human Knowledge According To Saint Gregory Of Nyssa.* Washington DC 1952.

WEITZ, Morris. *Hamlet And The Philosophy Of Literary Criticism.* Chicago Univ Of Chicago Pr 1964.

In this book Weitz examines concepts of criticisms by taking criticism of *Hamlet* as a test case. The principal critics considered are A C Bradley, Ernest Jones, G Wilson Knight, T S Eliot, Francis Fergusson, and J Dover Wilson; the criticism of Dryden, Pope, Johnson, Coleridge, and Tolstoy is also touched on. Weitz concludes that four irreducible procedures properly fall under the rubric "criticism"—description, explanation, evaluation, and poetic—and that only the first of these yields conclusions that can be called "true" or "false." Weitz states that the aim of his book is to clarify the conceptual apparatus of criticism and to help bridge the gap between philosophy and the humanities.

WEITZ, Morris. *Philosophy In Literature: Shakespeare, Voltaire, Tolstoy, And Proust.* Detroit 1963.

In this series of four lectures plus epilog Professor Weitz discusses the ways in which *Candide*, *Anna Karenina*, *Hamlet* and *Remembrance Of Things Past* embody various philosophical ideas, and how these ideas function aesthetically in their literary contexts.

WEITZ, Morris. *Philosophy Of The Arts.* Cambridge Harvard Univ Pr 1950.

Professor Weitz sets out to solve certain fundamental issues in contemporary aesthetic theory and in the arts themselves. He offers an organic theory of the nature of art, and discusses in varying detail, as illustrative of this theory, painting, poetry, music, the cinema, sculpture, architecture, etc. His familiarity with the contemporary scene in aesthetic criticism firmly buttresses his methodological technique in getting at the fundamental issues involved.

WELBON, Guy Richard. *The Buddhist Nirvana And Its Western Interpreters.* Chicago Univ Of Chicago Pr 1968.

WELCH, E Parl. *The Philosophy Of Edmund Husserl: The Origin And Development Of His Phenomenology.* NY Columbia Univ Pr 1941.

"The purpose of this book is not only to trace the course of Edmund Husserl's philosophic development from his *Philosophie der Arithmetik* to *Meditations cartesiennes*, but also to give as explicit a statement as possible of 'what I believe to be the principal tenets of his fully developed 'phenomenology'...' the remarks to follow, with the exception of the final section, are deliberately expository." In this aim the author has succeeded in giving both the origin and the development and a summary of the final position of Husserl for the "still comparatively few American philosophers who are intimately conversant with it."

WELCH, E Parl. Edmund Husserl—An Appreciation. *Personalist* 21,159–166 Ap–Spr 40.

WELLMAN, Carl. *Challenge And Response: Justification In Ethics.* Carbondale S Illinois Univ Pr 1971.

The author explains and defends his theory of justification, especially as it applies to the justification of ethical statements. He distinguishes three kinds of reasoning—deduction, induction and conduction—and explains what role each plays in ethics. He then develops an original theory of reasoning as using or following arguments that would persuade the normal person after indefinite critical discussion and a theory of justification as meeting challenges. Finally he distinguishes challenges to truth, truth-value, meaningfulness, validity, validity-value, competence and knowability and explains some of the ways each can be adequately met.

WELLMAN, Carl. *Morals And Ethics.* Glenview IL Scott Foresman 1975.

This introductory text in ethics deals with six pairs of problems, specific moral problems paired with theoretical ethical problems. Each moral problem is defined, the main pro and con arguments are summarized, and the author presents and defends his own solution. Each ethical problem is posed, the main theories intended to solve it explained, and each theory evaluated briefly; the author then explains and defends his own theory very briefly.

WELLMAN, Carl. *The Language Of Ethics.* Cambridge Harvard Univ Pr 1961.

After a critical review of the main types of metaethics, the author presents and defends his own theory of the meaning of ethical sentences. He assesses the strong and weak points in ethical naturalism, ethical intuitionism, the emotive theory of ethics, and the ordinary-language approach. He then distinguishes descriptive, emotive, evaluative, directive and critical meaning. Finally, he argues that words like 'good' and 'bad' typically have evaluative meaning and that words like 'right', 'wrong' and 'ought' usually have critical meaning.

WELLMAN, Carl. A Reinterpretation Of Mill's Proof. *Ethics* 69,268–276 Jl 59.

The purpose of the article is to present a plausible interpretation of Mill's proof for utilitarianism. It is suggested that Mill gave no reasons for accepting a teleological rather than a deontological theory of obligation because he believed that the latter was not a reasonable alternative to his own position. It is suggested that the inference from being desired to being desirable is justified by Mill's presupposition that the only possible criticism of desire is in terms of some further end to which the object of desire is a means. The inference from the happiness of each person to the happiness of all persons is taken to be justified by the logical fact that logical inference by its very nature is implicitly universal.

WELLMAN, Carl. Judgments Of Value And Obligation. *Ethics* 74,143–149 Ja 64.

The author defends the distinction between value judgments and judgments of obligation which he drew in his book *The Language Of Ethics*. He maintains that these kinds of judgments have in common the characteristics of indication (of the subject of evaluation) and assertion-denial, but that value judgments express partiality while judgments of obligation express criticism. The idea that value judgments are not critical and judgments of obligation are not partial are defended against William K Frankena's questioning.

WELLMAN, Carl. Our Criteria For Third-Person Psychological Sentences. *J Phil* 58,281–293 My 61.

The purpose of the article is to show that Norman Malcolm's reply to scepticism with respect to other minds is inadequate because it rests upon several false presuppositions about our criteria for third-person psychological sentences. The author argues that even granted the existence of public criteria for such sentences, the possibility for scepticism remains, and that in fact the criteria that give meaning to descriptions of other minds might well be one's private experiences.

WELLMAN, Carl. The Ethical Implications Of Cultural Relativity. *J Phil* 60,169–183 Mr 63.

The purpose of the article is to distinguish between the genuine implications of cultural relativity for ethics and the spurious conclusions so often drawn by writers in ethics. It is important to distinguish between the relativity of mores, social institutions, human nature, acts, goals, value experiences, moral emotions, moral concepts, moral judgments, and moral reasoning; for each has different implications for ethics. The author argues that the revolutionary and sceptical conclusions so often drawn from cultural relativity are derived from unsound arguments. He also shows how some important ethical conclusions can be inferred from the facts of cultural relativity together with certain additional epistemological and ethical presuppositions.

WELLMAN, Carl. Wittgenstein's Conception Of A Criterion. *Phil Rev* 71,433–447 O 62.

The author explicates and criticizes the conception of a criterion present in the later writings of Wittgenstein. A careful examination of the relevant passages in *The Blue and Brown Books* establishes the main features of any criterion. The author then argues that Wittgenstein is correct in claiming that we often apply descriptive expressions on the basis of several criteria which may be present in varying degrees, that Wittgenstein fails to explain adequately precisely why descriptive language must be grounded in criteria, and that he is mistaken in alleging that our ultimate criteria are public.

WELLMUTH, John J. Some Comments On The Nature Of Mathematical Logic. *New Scholas* 16,9-15 Ja 42.

WELLMUTH, John. *The Nature And Origins Of Scientism*. Milwaukee Marquette Univ Pr 1944.

In this very readable lecture to the Aristotelian Society of Marquette University, Father Wellmuth undertakes to define the philosophical attitude which he names "scientism," and to exhibit some of its medieval manifestations. Scientism, he says, is "the belief that science, in the modern sense of that term, and the scientific method as described by modern scientists, afford the only reliable natural means of acquiring such knowledge as may be available about whatever is real." The predominance of this attitude in the modern period of philosophy is indicated by brief allusions to the mathematicism of Descartes, the physicism of Kant, the positivism of Comte, and contemporary views of philosophy as a set of tentative generalizations from somewhat less tentative scientific findings.

WELLMUTH, John. Two Views On Immediate Inference. *New Scholas* 18,123-146 Ap 44.

WELLS, Albert N. *Pascal's Recovery Of Man's Wholeness*. Richmond VA John Knox Pr 1965.

In "many basic ways Pascal is one of us and... he was never more relevant to any age than he is to our own." This theme is explicated through the interpretation of *Pensées* 792 which is the key passage summarizing the notion of "reality as wholeness," the central thought of the author. The recognition of wholeness provides the insight by which all reality is unified: science and religion, faith and reason, experience and the world, mystery and certitude, revelation and empirical knowledge, and the simplicity and complexity of the world. The conclusion holds to Pascal's vision as a perspective "from which a true Christian philosophy becomes a genuine possibility," and modern problems in science and religion can be approached in terms of their mutual relations.

WELLS, Donald A. *God, Man And The Thinker: Philosophies Of Religion*. NY Random House 1962.

This is a textbook in the philosophy of religion. The subject is conceived in a broad way as simply the attempt "to think critically about the subject of religion." The main concerns are the evaluation of the truth claims of religion and the evaluation of its significance in other ways than truth value. The focus is on the Judaeo-Christian tradition but there is considerable attention paid to Hinduism, Buddhism, and Jainism. Chapters deal with such topics as the nature of religion and the philosophy of religion; the concept of God and arguments for God's existence; the question of religious knowledge; the problems of evil, of immortality, of "inerrant scripture," of "progress" in religion, of fundamentalism, modernism and humanism; issues connected with psychology and religion, church and state, and religion and science. There are summary questions to guide student reading, bibliographies for each chapter, and an index.

WELLS, Harry K. *Pragmatism: Philosophy Of Imperialism*. NY International 1954.

WELLS, Harry K. *Process And Unreality: A Criticism Of Method In Whitehead's Philosophy*. NY King's Crown Pr 1950.

The author attempts to demonstrate that Whitehead's philosophical method is inadequate to deal with the world characterized as process. Because Whitehead's method is rooted in the traditional formal logic, the author maintains that there is a fundamental contradiction between the method and the subject. Part I deals with Whitehead's natural philosophy. It shows how he is led to bifurcate nature into "events" and "objects," with "rhythms" as the only internal relationship between them. Part II investigates the nature and history of the method of formal logic, and at the same time traces the development of a new method based on contradiction from Heraclitus to Hegel. Part II reveals the lengths to which Whitehead is driven in an attempt to coordinate the two worlds posited in his natural philosophy, the world of time and process and the timeless world of "eternal objects."

WELLS, Harry K. *The Failure Of Psychoanalysis: From Freud To Fromm*. NY International 1963.

This is a sympathetic but conclusively devastating analysis of the failure of psychoanalysis. This failure is not accidental, but is endemic to the system which has several major and crucial contradictions. That the most flexible of psychoanalysts such as Horney, Sullivan, and Fromm are unable to extricate themselves from the

postulate of unconscious motives prevents them from calling for empirically open, social reform. The postulate of unconscious motivation, at its best, leads to utopian therapy; at its worst it leads to conformism and continued illness in the present social order.

WELLS, Harry K. Pavlov And Freud: II, Sigmund Freud, A Pavlovian Critique. NY International 1960.

In this work, Freud's theories are compared with Pavlov's science of brain functioning, and are criticized as inadequate. The author maintains that Freudian theory is a product of a temporary gap in the development of cerebral psychology, a gap bridged by Pavlov and his followers. Pavlov's contributions are defended for the light that they throw on mental behavior.

WELLS, Norman J. Existence: History And Problematic. *Monist* 50,34-43 Ja 66.

An initial consideration is given of the tensions involved in the perspective of the historian of philosophy. Thereafter, Greek, Medieval and Early Modern positions on being or existence are discussed. Beginning with Parmenides and terminating with Plotinus, the dominant refrain of Greek philosophy is that being is form. With Avicenna, an aspect of being beyond form is isolated—the existential dimension. However, metaphysics still focuses on the formal; existence remains untapped. In a singular departure from tradition, existence for Thomas Aquinas is no longer a "topping off" of an autonomous essence. It is the primordial, most basic dimension of anything that is *really other than and different from essence*. However, this has always been interpreted with Avicennian or Aristotelian spectacles on. This has led to the position of Suarez affirming the identity of essence and existence. The stage is set for appreciating the concept of existence as completely empty and vacuous.

WELLS, Norman J. Suarez, Historian And Critic Of The Modal Distinction Between Essential Being And Existential Being. *New Scholas* 36,419-444 O 62.

WELLS, Ronald Vale. *Three Christian Transcendentalists: James Marsh, Caleb Sprague Henry, Frederic Henry Hedge*. NY Columbia Univ Pr 1943.

This is a very valuable contribution to the history of the romantic movement in America. In distinction from Emerson, Thoreau, Ripley, and their friends, these three men represent the movement in the church. Of the three, James Marsh is the most systematic philosopher. His absolute being of undivided reason exists or lives its unity in the infinite manifold of individuation. Henry is the least philosophical and is more concerned in applying transcendentalism to political and educational practice.

WELLS, Rulon. Is Frege's Concept Of Function Valid? *J Phil* 60,719-730 N 63.

If a system of concepts achieves a certain technical purpose, such as consistency, this is a kind of fruitfulness and a minimal validity; if, furthermore, no other system achieves that purpose, then by default the system has maximal validity. The present criticism of Frege's concept of function—or of his whole system of concepts—can be put as follows: Frege attempts (though unsuccessfully) to establish minimal validity, but he does not even raise the question of maximal validity.

WELLS, Rulon. What Has Linguistics Done For Philosophy? *J Phil* 59,697-708 N 62.

Of the various ways in which empirical linguistics might be interesting to a philosopher, one is concentrated on here: the interest that may be called practical, or instrumental—Would the study of various particular languages or of the principles of linguistics make one a better philosopher? After criticizing linguists, and notably Whorf, for their own unclarity about identity conditions of a language and the way in which language functions as a cause, the paper concludes that to progress effectively the linguist needs those skills of analysis and theory construction which are a specialty of the philosopher.

WELSH, Paul (ed). *Fact, Value, And Perception: Essays In Honor Of Charles A Baylis*. Durham NC Duke Univ Pr 1975.

These essays fall into three groups. In logic: fact correlates and surrogates; the subject-predicate relation and Baylis' theory of facts; the universality of the proposition 'All men are mortal'. In ethics: reasonableness is the ultimate justification of moral rules; goodness and intentions to distinguish value properties from deontic ones; 'faith' in the Catholic, Calvinist and Lockean traditions; and personal discrimination from the viewpoint of ethical naturalism. In esthetics: views on skill and object; Baylis' realistic interpretation of perception; and the causal relation between the facts and the content of perceptual experience.

WERKMEISTER, W H (ed). *Reflections On Kant's Philosophy.* Gainesville Univ Pr Of Florida 1975.

The book's seven essays discuss aspects of Kant's epistemology: Beck tracing some of the historical sources of the problem of *a priori* synthetic judgments; Gram denying the need for the "double affection" interpretation of Kant's theory of perception; and Van De Pitte suggesting a revision in Kant by viewing purposiveness as a constitutive rather than a regulative principle. G Schrader and G Funke address Kant's moral philosophy. W H Werkmeister argues that Kant goes beyond Newton's physical theories in such a way as to anticipate important developments in modern physics; while T B Humphrey contends that Kant's Copernican Revolution fails to yield a basis for certainty in geometry.

WERKMEISTER, William H. *A Philosophy Of Science.* NY Harper 1940.

This comprehensive volume combines science, the history of science, and the philosophy of science in a manner which is somewhat unique in contemporary literature. The approach is by way of the history of science. The issues which make up the subject-matter of the philosophy of science are then shown to have emerged at a particular time and as a result of a certain configuration of problems. Similar treatment is accorded the other sciences, from mathematics to psychology.

WERKMEISTER, William H. *Man And His Values.* Lincoln 1967.

Despite the biological basis of his existence and his social environment, man is free and remains essentially a project—a task to be fulfilled through his own efforts. Whenever we commit ourselves, our own self is at stake. That is to say, our act of commitment is simply a manifestation of our own self, and the value considerations

leading to the commitment reflect only the value standards basic to our own existence as a person. Only by commitment are we at the level of self-fulfillment, and only at the level of self-fulfillment are we totally at stake as persons. The basic moral principle—the categorical imperative—states that it is your duty at all times to fulfill your obligation. An act is morally right when it is done in conformity with the highest commitment relevant to a given situation—a commitment in and through which we achieve or preserve our integrity as a person.

WERKMEISTER, William Henry. *The Basis And Structure Of Knowledge.* NY Harper 1948.

The volume is not so much a book on epistemology as one on the foundations of scientific methodology. In Part I, on language and meaning, the author develops the idea that, whereas language is a system of signs or words, meanings exist only as mental contents, more or less corresponding to the words used in communication of experiences. Part II deals with the knowledge of the external world, categories and truth; both truth and reality are interpreted as personal in origin, being two projected and complementary systems. Part III is devoted to the analysis of the place of logic and mathematics in science. And the last part discusses briefly the nature of the scientific method and, at a greater length, the meaning of scientific concepts, principles and laws.

WERTHEIMER, Max. *Productive Thinking.* NY Harper 1945.

This posthumous volume by one of the founders of Gestalt psychology is published as he wrote it except for some linguistic revisions. It is based on material presented by Professor Wertheimer in recent years to his classes at the New School for Social Research, and was regarded by him as a prolegomenon to two other books he had hoped to write. The present volume thus contains his matured reflections on the nature of "living thought," and is an engaging introduction to the central conceptions of the Gestalt approach in psychology. Though it treats of technical matters, it exhibits Professor Wertheimer's informal manner, his contagious enthusiasm, and his charm.

WERTHEIMER, Roger. *The Significance Of Sense: Meaning, Modality And Morality.* Ithaca NY Cornell Univ Pr 1972.

The subtitle suggests that this is a study in ethical theory, but the author's aim is to consider certain linguistic questions about modal terms. His first chapter examines philosophic uses of 'good', 'right' and 'ought'—and the following four chapters study univocity as applied to each of these terms. He is insistent that there is no distinctive moral usage for good and right. Yet he concludes that "ethics is the most important study" and further that the moral philosopher "will learn no more about it [morality] by studying the word 'right' than he would by studying the word 'true': nothing."

WERTZ, S K. A Note On The Hidden Cartesianism In Hyland's Methodological Suggestions For Sports Inquiry. *J Philosophy Of Sport* 3,118-120 S 76.

This brief discussion shows that Drew A Hyland has a difficult time escaping from Cartesianism in his methodological suggestions for sports inquiry. Although Professor Hyland embraces Aristotelianism, i.e., multiple methods as opposed to a singular approach (which is characteristic of the Cartesian stance), some of his recommendations have Cartesian assumptions or presuppositions. These are pointed out, and a short reformulation of Hyland's original position is made along the lines of a passage from Aristotle's *Nicomachean Ethics*.

WESSELL, Andrew and Schon, Donald. Appeal To Rule. *J Phil* 53,495-501 Ag 56.

WESSON, Robert G. *Why Marxism: The Continuing Success Of A Failed Theory.* NY Basic Books 1976.

Wesson contends that Marxism is largely unoriginal, inconsistent, and outdated; its predictions did not come true; and it did not, where applied, produce abundance, freedom, and personal fulfillment. Wesson predicts that Marxism, as currently understood, will become less relevant, both in Communist countries and elsewhere, but a new reshaping of Marxism may emerge which will be called the "true meaning" of Marxism.

WESTFALL, Richard S. *Science And Religion In Seventeenth-Century England.* New Haven Yale Univ Pr 1958.

This is an approach to the interaction of the growing sciences and the Christian religion: "a case history of intellectual change," as mankind lays aside one world view and takes up another. The author examines the opinions of the *virtuosi*, who were at once committed to Christianity and natural science. Primary concern is shown to Boyle, Charleton, Glanvill, Locke, Newton, Ray, and Wilkins. While the *virtuosi* believed the study of nature to be a religious experience, some of the problems they posed sowed seeds of eventual conflict. Emphasis upon the natural order grew into a natural religion which finally questioned man's reasoning power when confronted with mysteries.

WESTPHAL, Merold. Temporality And Finitism In Hartshorne's Theism. *Rev Metaph* 19,550-564 Mr 66.

The author argues that, contrary to the basic tenets of Charles Hartshorne's neo-classical theism, God's knowing and loving a contingent world do not entail that he is subject to change and dependence. In support of his view, he critically examines Hartshorne's notions of divine temporality and finitude. Then, reviewing pertinent passages in Thomas Aquinas' *Summa Theologiae*, he demonstrates that classical theists could and did consistently maintain that while God is related to creatures he is not dependent upon them. He concludes that a morally objectionable Leibnizian necessitarianism is not the only coherent alternative to Hartshorne's position.

WETHERBEE, Winthrop. *Platonism And Poetry In The Twelfth Century: The Literary Influence Of The School Of Chartres.* Princeton NJ Princeton Univ Pr 1972.

This is a careful study of the ideas and poetry developed at the Cathedral School of Chartres, one of the finest in Latin Christendom during the eleventh and twelfth centuries. The introduction and the two first chapters deal with the movements that lead to the period under examination. In the remainder, the author discusses the dominant figures of Bernardus Silvestris [de Tours], Alain de Lille [1120-1203], and Jean de Hanville, and with special attention to the kind of Platonism the group inherited and developed. The special chapters also treat in context the background, forms and principles of poetry as cultivated at Chartres. It is shown that Chartian humanism must be understood as a theme for poetry as well as an act of self-definition implicit in the quest for wisdom.

WHEAT, Leonard F. *Paul Tillich's Dialectical Humanism: Unmasking The God Above God.* Baltimore Johns Hopkins Pr 1970.

Paul Tillich's *Dialectical Humanism* is a significant attempt to grasp the "key" to the complexities of Tillich's archetectonic theological system. Wheat believes that all interpreters of Tillich are either wrong or terribly confused. Tillich is easily comprehensible for Wheat. Tillich is a "dialectical humanist, cast in a Hegelian mold." Tillich's philosophical orientation is based on a popular 19 Century German notion of *homo noumenon*, that God is man, and probably (Wheat affirms) was learned from Feuerbach and Marx and Schelling. Tillich, in other words, merely equivocates.

WHEELER, Arthur M. Margolis On Responsibility In Psychotherapy. *Mental Hygiene* 53,309-310 Ap 69.

Joseph Margolis, in *Psychotherapy and Morality*, argues that determinism does not rule out responsibility in psychotherapy. I argue that he settles this by definition. The same is true, I believe, of Margolis' claim that the patient must have acted in a relatively free way in order to undertake analytic therapy. For if John Hospers is correct, the patient is not even responsible for his cooperation with the analyst. Margolis does give the more traditional definition of determinism and then shows his own position deviates from that "extreme metaphysical position." But then why call his own view determinism, since, on the usual definition, it is indeterminism.

WHEELER, Arthur M. Mowrer And Nietzsche's "Superman". *Mental Hygiene* 51,30-31 Ja 67.

O Hobart Mowrer, in *The Crisis in Psychiatry and Religion*, says that Nietzsche's "Superman" was to live beyond good and evil, and Hitler and the mass extermination of the Jews were horrid manifestations of this dream. Nietzsche himself argues that he does not mean "beyond good and bad," which is a distinction originating in a ruling class, a distinction meaning practically the same as "noble" and "despicable." To Nietzsche the antithesis "good" and "evil" is put forth by slave morality, a morality put forth by men of rancor. So, to Nietzsche, to live "beyond good and evil" is to live beyond slave morality.

WHEELER, Arthur M. Niebuhr, Dewey, And God. *Journal Of Religious Thought* 25,42-48 1968-69.

Reinhold Niebuhr believes that myth is needed; if we take Biblical symbols literally, Christian faith is reduced to metaphysical truths which need not be apprehended inwardly by faith. The credibility of Christianity is hampered by a literal interpretation. Niebuhr usually says God is known by faith, but he does give a brief argument, that the creation is contemplated as pointing to a Creator, already known in man's moral experience. I conclude that if Niebuhr is correct, the sort of God thus known is Dewey's God, not a supernatural being, but rather, ideal ends which have been imaginatively projected.

WHEELER, Arthur M. On Lewis' Imperatives Of Right. *Phil Stud* 12,59-60 1961.

In his review of C I Lewis' "The Ground and Nature of the Right" (*Philosophical Review*, July, 1957), Professor William Frankena says Lewis' view seems to be that naturalism is false for the basic imperatives of right. Does Lewis regard such imperatives as analytic? In *Our Social Inheritance*, Lewis writes that fundamental moral principles are definitive of justice. Earlier, Lewis said in every science there are fundamental laws which are *a priori* because they formulate definitive concepts by which investigation becomes possible. Lewis also states that the basic principle of social morals must be in some sense *a priori*. Since Lewis holds that the *a priori* and the analytic coincide, I conclude that Lewis' view is that the basic imperatives of right are analytic.

WHEELER, Arthur M. Trueblood, Religious Experience And Unanimity. *Crane Review* 68-78 Wint 65.

In *The Logic of Belief* David Elton Trueblood argues that religious experience is cognitive and supports religious belief. I argue that he begs the question by saying religious experience reports itself as limited by the nature of the real as known. The question is whether it can legitimately so report itself. I argue that Trueblood's implicit move from a similarity of the ideal of saintliness to a similarity of the experience of God is illegitimate. I conclude that Trueblood begs the question by omitting examples which go against his assumption of the unanimity of religious experience and by talking of "normative experience."

WHEELER, Mary Cecelia. *Philosophy And The Summa Theologica Of Saint Thomas Aquinas.* Washington DC Cath Univ Of Am Pr 1956.

This is a dissertation for the Ph D Degree. It contains a discussion of the historical, metaphysical, and psychological grounds for relating philosophy and theology; and it shows how philosophical considerations determined the order and method of the *Summa Theologica*.

WHEELIS, Allen. *The Quest For Identity.* NY Norton 1958.

A philosophical essay by a professional psychoanalyst (including six fictional sketches by the author), the book deals with "man in mid-twentieth-century America... his changing character... the loss of his old identity... his search for a new one." The long chapter on value (Chapter 6) develops the view that "values determine goals, and goals define identity." Loss of identity, "a coherent sense of self," is linked to loss of a strong, institutional framework in American society. "Psychoanalysis provides no value system, nor should it." Supplemented by sociology and anthropology, it provides knowledge on the basis of which a new identity may be formed. Constant change makes it impossible to re-form identity based on strong institutional values. Dewey's instrumentalism offers a solution: "We must settle for a path of progress... for a direction rather than an end." "Identity is not... to be found; it is to be created and achieved."

WHEELWRIGHT, Philip Ellis. *Philosophy As The Art Of Living.* Stockton CA Col Of The Pacific 1956.

WHEELWRIGHT, Philip. *Heraclitus.* Princeton NJ Princeton Univ Pr 1959.

WHEELWRIGHT, Philip. *Metaphor And Reality.* Bloomington Indiana Univ Pr 1962.

If Reality or What-Is is "presential, perspectival and coalescent," then only the tensive language of metaphor is adequate to express and reveal it. Dividing metaphor into epiphor, movement from the concrete to the strange, and diaphor, movement through the heterogeneous, Wheelwright extends the terms to myth as a

- narrative or story. The author intertwines the complexities of anthropology, mythology, poetry, and philosophy.

- WHITE, Alan R.** Moore On A Tautology. *Phil Stud* 9,1–3 1958.
- The article goes into G E Moore's position that "'Z' means that Z" is not a tautology with the purpose of clarifying the notion of a tautology. According to the author much of Moore's argument hangs on whether someone knows that a statement is a tautology such as when half of a proposition is in a foreign language. He concludes that much of the difficulty in being able to distinguish between a tautological statement and an empirical statement about language is that changes in the meaning of our words can turn an expression of a tautology into the expression of a nontautology.

- WHITE, Morton Gabriel.** *Social Thought In America; The Revolt Against Formalism*. NY Viking Pr 1949.
- WHITE, Morton Gabriel.** *The Origin Of Dewey's Instrumentalism*. NY Columbia Univ Pr 1943.
- Mr White presents a chronicle of Dewey's intellectual development, from uncritical Hegelianism in his earliest works to the beginnings of instrumentalism in the *Studies In Logical Theory* of 1903. The essay analyzes Dewey's first four books. The book is also a contribution to the history of American philosophy. It offers an exposition of the views held by George Sylvester Morris, and Franklin Ford and Alfred Lloyd, all of whom, White demonstrates, had a marked bearing on Dewey's thought. Perhaps the most valuable aspect of White's book is its direct and implied pointing to the elements of Hegelian idealism which persist in Dewey's later categories.

- WHITE, Morton.** *Foundations Of Historical Knowledge*. NY Harper & Row 1965.
- This philosophy of history focuses on the roles of factual statements, lawful generalizations and value judgments in historical investigation and writing. The author argues that explanatory statements imply the existence of lawful generalizations, though not the specific laws themselves. Confirmation of such explanatory statements is to be found either in a deductive argument having the antecedent of the singular statement as premise and the consequent as conclusion, or in an inductive argument for the existence of such a deductive argument. White says value judgments are not involved which would lead to the assertion or implication of false propositions.
- WHITE, Morton.** *Religion, Politics, And The Higher Learning: A Collection Of Essays*. Cambridge Harvard Univ Pr 1959.
- WHITE, Morton.** *Science And Sentiment In America, Philosophical Thought From Jonathan Edwards To John Dewey*. NY Oxford Univ Pr 1972.
- The author has chosen as the theme of his study on "Philosophical Thought from Jonathan Edwards to John Dewey," the book's subtitle, what he thinks is "... the most important and interesting strain in the development of American philosophy—its response to the challenge of modern science and scientific method." The work will reinforce his reputation as a historian of philosophy gained from his earlier study of *Social Thought in America: The Revolt Against Formalism*. Chapters are devoted to: the legacy of Locke; Edwards [1703–1758], the Revolutionary thinkers; Transcendentalism; Emerson; Wright; Peirce; James; Royce; Santayana; and Dewey.
- WHITE, Morton.** *Toward Reunion In Philosophy*. Cambridge Harvard Univ Pr 1956.
- The author traces parallel developments during the past fifty years in the fields of metaphysics, epistemology, and ethics through three periods labeled analytic Platonist, orthodox logical positivist, and pragmatic, and characterized as "the age of meanings, the age of words, and the age of decision." In offering "a philosophical outlook that goes beyond" the three, Professor White advocates "a breakdown of the epistemological differences between the logical, the physical and the ethical... between the analytic, the synthetic and the emotive." It is contended that "we cannot distinguish radically between different methods of discovering what is, what must be and what should be."

- WHITE, Morton.** Memories Of G E Moore. *J Phil* 57,805–809 D 60.
- The author recalls G E Moore's impact on the New York philosophical community in the 1940's. Despite difficulties in his own method of analysis, Moore allowed his students to see that something like analysis was of fundamental importance in philosophy.
- WHITE, Morton.** Ontological Clarity And Semantic Obscurity. *J Phil* 48,373–380 Je 51.
- The author suggests serious problems have arisen in linguistic philosophy as a result of modern analysis. Ontological progress is being made at the expense of semantic obscurity. He recommends metalinguistic notions, which are as problematic as that which they were introduced to eliminate, must be examined and a new type of investigation should be considered.
- WHITE, Nicholas P.** *Plato On Knowledge And Reality*. Indianapolis IN Hackett 1976.
- This book is an examination of Plato's attempt to show how we can conceive that there is an objective reality, independent of what we may happen to believe, for our efforts at cognition to be right or wrong about. A number of dialogues are discussed, in chronological order.
- WHITE, William.** Robinson Jeffers's Space. *Personalist* 44,175–179 Spr–Ap 63.
- WHITEHEAD, Alfred North.** *American Essays In Social Philosophy*, A H Johnson (ed). NY Harper 1959.
- WHITEHEAD, Alfred.** *Dialogues Of Alfred Whitehead, As Recorded By Lucien Price*. Boston Little Brown 1954.
- Thanks to the gifted Lucien Price, editorial writer for the Boston *Globe*, this book contains almost verbatim accounts of lengthy conversations at the famous Sunday evenings at the Whiteheads during the last fifteen years of the philosopher's life from 1932 to 1947. They are not for the most part philosophical dialogues in any technical sense. The themes of Whitehead's philosophy, such as process, contingency, incompleteness, infinite possibility, and aesthetic sensibility to nuances, are ever present beneath the surface of the discussions, which range far and wide, but they do not often form the substance of any dicta which add to the sum total of Whitehead's system.

- WHITTIER, Duane H.** Basic Assumption And Argument In Philosophy. *Monist* 48,486-500 O 64.
- The basic assumptions underlying a philosophical position must be defended. But no reasons can be given for a basic assumption that do not themselves already presuppose that very assumption as the ground which establishes their "goodness." Moreover, the presuppositional framework that occasions any given philosophical problem, also prevents any solution of it, as long as that framework is adhered to. These two theses are presented by way of examining five specific philosophical disputes. The author concludes that, when philosophers contend over basic assumptions, this contending involves the creation of new rules-of-meaning, rather than appeal to any established rules-of-meaning.
- WHITTIER, Duane H.** Causality And The Self. *Monist* 49,290-303 Ap 65.
- This paper's thesis is that there is no proper way of conceiving the self so that freedom and determinism can be made to conflict. Libertarians who hold the self to be an unconditional power of self-determination, and determinists who consider the self as never responsible for its acts, alike make the mistake of thinking that causality works upon us, rather than through us. The will is neither externally determined, nor is it a center of absolute freedom which non-determinately responds to confronting causal forces. Rather, we are a history of causation which interacts with present causal circumstances. In developing this thesis the "imputation" theory of free will is examined and judged consonant with, rather than an alternative to, determinism.

- WICK, Warner Arms.** *Metaphysics And The New Logic.* Chicago Univ Of Chicago Pr 1942.
- In this book, which is an examination of the work of Logical Empiricism in relation to the problems of metaphysics, Dr Wick traces the internal development of the Positivist's conception of equating the study of philosophy with that of the logic of science. For the positivist, it is apparent that this view of the nature of the philosophical function eliminates a great deal of traditional philosophy with its many metaphysical problems; however, to Dr Wick, such is not the case.

- WICKUM, Carl.** *The Total State: A Philosophical Interpretation Of Contemporary And Future Society.* Boston Forum 1964.
- The author contends that even the most democratic states are growing larger, more complex and more purposeful as a result of the desire for economic sufficiency and security and the conviction that these will come only through strengthened governmental controls and restraint of individual freedoms. The overwhelming majority do not even want "free will democracy," and are not best suited to function in it anyway. Free will is a mirage, in fact completely out of harmony with evolution. We cannot escape our fate as cogs in a vast social machine, and as the machine grows larger the cogs become smaller, more integrated, and less important. Future progress lies in an ever tighter cohesion of the integral parts into a "Total State," a totalitarian supra-nationalist socialism or "Totalism." The author predicts this will inevitably come about, but he also says we have to be prepared to use force and compulsion, instead of discussion and persuasion, to bring it about.
- WIDEN, Irwin.** Should Parochial Schools Receive Public Funds? *Educ Theor* 3,293-306 O 53.
- WIDGERY, Alban G.** *A Philosopher's Pilgrimage.* NY Crowell 1961.
- WIDGERY, Alban G.** *Christian Ethics In History And Modern Life.* NY Round Table Pr 1940.
- Alban G Widgery's book is neither a history of Christian ethics nor a systematic account of its first principles, but consists rather of prolegomena to both. It deals with selected historical manifestations of Christian ethics and its application to typical modern problems which have been centers of contention. As a theistic philosophical realist, Professor Widgery renounces any authority save that of experience and reason.

- WIEMAN, Henry N** and others. *Religious Liberals Reply.* Boston Beacon Pr 1947.
- The "seven men of philosophy" whose contributions are included in this little volume are all liberals. That is to say, they believe that human activities should be liberating. Most of the seven are technically able in philosophic analysis, and have little difficulty in disposing of the illogic of such exponents of neo-obscurantist movements as Reinhold Niebuhr, Karl Barth, Emil Brunner, Paul Tillich, and the master of them all, Kierkegaard.
- WIEMAN, Henry N.** *Man's Ultimate Commitment.* Carbondale S Illinois Univ Pr 1958.
- This volume summarizes the religious naturalism which the author has worked out philosophically and preached as a practical discipline for fifty years. The principle of "creative interchange" On which this theory of commitment rests implies the reciprocal advantages that accrue to individuals and groups from an interchange and appreciative understanding of the individuality of each. Such creative understanding is possible only when carried out with "reason, faith, and unanimity." The second half of the volume applies this doctrine to the church, education, industry, government, industrial civilization and the interpretation of history.
- WIEMAN, Henry N.** Democracy And Language. *Ethics* 52,216-221 Ja 42.

WIEMAN, Henry Nelson. *Intellectual Foundation Of Faith.* NY Philosophical Lib 1961.

Professor Wieman formulates the questions raised by faith—e.g., What operates to expand the vision of man and to enable him to do what he cannot now do to make life better?—and he examines the answers provided by John Dewey, by personalists (especially Peter Bertocci), by Paul Tillich, and by Karl Barth. Concluding that a transcendent but not supernatural creativity is basically what we have faith in, he discusses the relevance of creativity to "world community" (broad-scale human cooperation), to education, and to freedom.

WIEMAN, Henry Nelson. *The Directive In History.* Boston Beacon Pr 1949.

Of the "directive" he seeks, the author comments, "Complex and widely interwoven into our lives and mixed with all manner of other processes, it will be difficult to know with clarity." In this volume the author provides a searching account of naturalistic theism, to the end that this "directive" should provide humanity with a hope for the future.

WIEMAN, Henry Nelson. *The Source Of Human Good.* Chicago Univ Of Chicago Pr 1946.

This book is devoted mainly to a study of value and what follows from a theory of it in the fields of religion, ethics, knowledge, faith, beauty. He calls his view "contextualism," giving to that term specific meaning.

WIEMAN, Henry Nelson. Co-operative Functions Of Science And Religion. *Zygon* 3,32–58 Mr 68.

WIEMAN, Henry Nelson. The Problem Of Religious Inquiry. *Zygon* 1,373–400 D 66.

WIEMAN, Henry N. Perception And Cognition. *J Phil* 40,73–77 F 43.

This is a notable article pertaining to the notion of the immediacies of experience as they relate directly to Wieman's empirical method. His epistemology sought to express the element of creative activity and purposive growth empirically and valuationally at work within the world. In his theory of the generic nature of perception presented here Wieman describes man's most elemental feeling capacity as it relates directly to experience as the foundation of the philosophy of organism. Perception is the apprehension of something as a single unitary whole with its parts so ordered that they are distinguishable and vivify one another, and yet all together compose an indivisible being.

WIENER, Norbert. *God And Golem, Inc: A Comment On Certain Points Where Cybernetics Impinges On Religion.* Cambridge MA MIT Pr 1964.

The intention of the author is to discuss certain areas in which the "communication and control" sciences (Cybernetics) impinge on religion. The author singles out three such areas. One has to do with machines which learn, another concerns machines which reproduce themselves, and a third relates to the coordination of machine and man as in a game of checkers in which the machine also learns. Throughout the discussion, the author relates his ideas to some of the concepts commonly employed in religion, and suggests the need of re-examining them.

WIETTING JR, Hardy Lee. Philosophical Problems In Majority Rule And The Logrolling Solution. *Ethics* 76,85–101 Ja 66.

One problem involved in the voting procedure of majority rule is that it does not allow for strength or intensity of preference. An "apathetic majority" can thus tyrannize an "intense minority," which seems wrong. In *The Calculus of Consent* J M Buchanan and G Tullock propose as a solution that we admit logrolling, "The process in which one voter trades his vote on some issue for that of another voter on some other issue...." Their argument is marred by a failure to distinguish clearly between intrapersonal and interpersonal differences in strength of preference. An actual institutionalization of log-rolling would not increase, but decrease, fairness in the voting procedure.

WIGGINS, Forrest Oran. Individualism And Individuality. *Personalist* 27,41–50 Ja–Wint 46.

WIGGINS, Forrest Oran. William James And John Dewey. *Personalist* 23,182–198 Ap–Spr 42.

WIGGINS, James W (ed) and Schoeck, Helmut (ed). *Relativism And The Study Of Man.* Princeton NJ Van Nostrand 1961.

The authors are concerned about the extension of methodological relativism into the area of human values, and particularly in the determination of broad policy questions concerning conflicting values. Among the participants are Ludwig Von Mises, Eliseo Vivas, Leo Stauss, Richard Weaver, and others.

WIGGINS, James W (ed) and Schoeck, Helmut (ed). *Scientism And Values.* Princeton NJ Van Nostrand 1960.

This anthology contains papers by 12 scholars from the natural sciences, social sciences, and humanities. The major target of their criticism is "scientism," understood as the attempted use of certain natural science methods and techniques in areas that the present critics regard as inappropriate. In his Introduction, Schoeck says: "Scientism implies a cynical world view—in the original meaning of the word: it is a doglike view of man, or shall we say ratlike?" Reductive views of man, behaviorism, and positivism are strongly opposed. Some of the authors see scientism as related to collectivism and the elevation of social "engineers."

WIGHT, Frederick S. The Revulsions Of Goya: Subconscious Communications In The Etchings. *J Aes Art Crit* 5,1–28 S 46.

WIGHTMAN, William Persehouse Delisle. *The Growth Of Scientific Ideas.* New Haven Yale Univ Pr 1951.

The author seeks to trace the growth of the major scientific concepts. In scope his treatment ranges from Thales to the present. The volume is divided into two parts, one on matter and motion, and the other on nature and life. Astronomy, mathematics, the Newtonian revolution, waves, the atom, life, static and dynamic theories of form, Darwin, the biological concept of continuity and organization—these and countless other ideas are discussed, related to past and future steps of discovery, and explored for their significance and place in the panorama that is the history of science.

WIGNER, Eugene Paul. *Symmetries And Reflections: Scientific Essays.* Bloomington Indiana Univ Pr 1967.

WIGNER, Eugene P. Two Kinds Of Reality. *Monist* 48,248–264 Ap 64.

The author attempts to arrive at an epistemology based on a general analysis of "what we mean by real," with quantum theory forming the background of the analysis. The two kinds of reality are: (1) our consciousness, perceptions, sensations and (2) everything else, the former being immediate and absolute, the latter consisting "in the usefulness of thinking in terms of it. This reality is relative and changes from

object to object, from concept to concept." The author concludes that the reason for the existence of any of (2), and for the consistency and accuracy of our picture of the world, is profoundly baffling, and that the same is true of the reality of the concepts of science.

WILKUND, Rolf A. A Short Introduction To The Neofinlist Philosophy Of Raymond Ruyer. *Phil Phenomenol Res* 21,187-198 D 60.

Ruyer opposes a mechanistic universe and in his philosophy shows the essential purposiveness of life. Meaning and direction are inherent in inorganic and organic worlds, and there is a natural prolongation of this in man's conscious activity. The search for knowledge implies freedom. Ruyer's phrase is: "I am seeking a first truth, a certitude, therefore I am free." His ideas of freedom, existence, work and invention are explored, and finally, his notion of God as the supreme ideal.

WILBER, Charles G. Biological Warfare. *Thought* 24,244-254 Je 49.

WILBUR, J B (ed) and Laszlo, Ervin (ed). *Value Theory In Philosophy And Social Science*. NY Gordon & Breach 1973.

WILBUR, James B (ed) and Laszlo, Ervin (ed). *Human Values And Natural Science: Proceedings Of The 3rd Conference On Value Inquiry, SVNey, Geneseo, 1969*. NY Gordon & Breach 1970.

WILBUR, James B (ed) and Laszlo, Ervin (ed). *Human Values And The Mind Of Man: Proceedings Of The IVth Conference On Value Inquiry*. NY Gordon & Breach 1971. This book is made up of thirteen papers. The first paper by J B Rhine relates parapsychology to religion and "the science of man." Abraham Edel's paper points out that the concept of virtue has been neglected of late but may be a topic of renewed interest in philosophical discussion. Larry Holmes argues that men differ from machines in that only men can set goals or purposes for themselves. Ruth Macklin read a paper on "the Language of Action."

WILCOX, John T. *Truth And Value In Nietzsche: A Study Of His Metaethics And Epistemology*. Ann Arbor 1974.

The book is a study of Nietzsche's theory of truth, reason, and knowledge, in general and with special reference to his theory of value. It is shown in detail how Nietzsche seems to be on both sides of the cognitivist/noncognitivist dichotomy; then an interpretation is developed which will resolve at least most of the apparent antinomies. Emphasis is placed on the Kantian thing-in-itself and categories; on evolutionary motifs; on the simplifying nature of concepts; on Nietzsche's deeply rationalistic rhetoric, especially in his critique of Christianity; and on the will to power.

WILCOX, John T. A Question From Physics For Certain Theists. *Journal Of Religion* 41,293-300 O 61.

The question is whether relativity physics is compatible with "temporalistic" conceptions of God, as developed by Hartshorne, Whitehead perhaps, and others. I explain why the problem is so great for these theisms and argue that William Christian's proposed solution is inadequate. This article has been widely discussed; see the survey in *Process Philosophy and Christian Thought*.

WILCOX, John T. From Is To Ought Via Psychology. *Rev Metaph* 18,254-266 D 64.

Some philosophers in the past have grounded their normative principles on psychological givens; they claimed that it was not necessary to prove that we ought to seek our own happiness (e.g.) because we all already do seek it. Many recent critics reject not only the psychological premise but also the logic of the inference. I argue that the inference is unobjectionable. I connect periods (eighteenth, twentieth centuries) in which an is-ought gap is perceived with doubt about the psychological premise, in the form in which ethical theory needs it. This essay won the 1964 SSPP Junior Award.

WILD, John Daniel. *The Radical Empiricism Of William James*. Garden City NY Doubleday 1969.

WILD, John. *Being And Time: A Reply*. *Rev Metaph* 17,610-616 Je 64.

In this note, the author responds to questions raised by Karsten Harries in his critique of the author's 1962 review of Martin Heidegger's *Being and Time*. He addresses himself to the significance of the "turning" in Heidegger's thought, the anthropocentrism of Heidegger's world, and the relation between world and being in Heidegger's ontology.

WILD, John. *Existence And The World Of Freedom*. Englewood Cliffs NJ Prentice-Hall 1963.

Professor Wild hopes his five sectioned work will acquaint the reader with a "new way of thinking that is growing in the Western World of our time, and with certain fundamental insights already achieved." Using the method in his way the author discusses the human life world by contrasting scientific fact to the life world. Wild (Section II) discusses questions of freedom and responsibility. Freedom, he holds, is the source of understanding. The core of the notion of responsibility is (responsible) action—a unity of action and meaning. Sections III and IV encompass some traditional questions in the light of the new approach. The issues include value, the individual and society, the notion of Transcendence.

WILD, John. *Human Freedom And Social Order: An Essay In Christian Philosophy*. Durham NC Duke Univ Pr 1959.

Christian philosophy has remained an unrealized possibility, according to Wild, because Christian Faith has hitherto, for the most part, been combined only with Greek Rationalism and the long Western tradition of abstract and objectivist thought. A New Christian Philosophy, using the method of phenomenological analysis of the *Lebenswelt* is developed in the areas of ethics and social philosophy. An ethics of self-realization is rejected in favor of self-transcendence. The book is carefully argued and Wild attempts to answer the objections which will surely be raised: that this philosophy is irrational, subjective, and a surrender of the autonomy of reason.

WILD, John. *The Challenge Of Existentialism*. Bloomington Indiana Univ Pr 1955.

Professor Wild believes that Anglo-American philosophy with its emphasis on logical analysis and "essentialism" is failing to fulfill its cultural function. As an antidote to the "breakdown of modern philosophy," he proposes that serious attention be given to the existentialist thought that has been developing in Western Europe. In this book he presents a sympathetic account of the chief trends of existentialism, as it began with Kierkegaard and has been developed by Heidegger, Jaspers, Sartre, and Marcel, pointing out the many respects in which he finds their thought penetrating and significant.

WILD, John and Earle, William and Edie, James M. *Christianity And Existentialism*. Evanston IL 1963.

This is a series of six lectures, two each by Professors Edie, Earle and Wild. Edie discusses historic themes in Chapter I, "Faith as Existential Choice," and contrasts Heidegger's views with Tillich's in Chapter V, "The Absence of God." Earle, in Chapter III, "The Paradox and Death of God," compares and contrasts Kierkegaard and Nietzsche as thinkers and, therefore, in this context, as human beings. Earle also contributes an especially exciting and illuminating chapter on Sartre—"Man as the Impossibility of God." Wild's contributions include a chapter on Christian Rationalism, primarily Aquinas and Maritain, and the final chapter, "The Rebirth of the Divine." Wild's thesis, and it appears to be the thesis of the volume, is that the absent God may now again return to us "making use of new images and new symbols."

WILD, John. Authentic Existence. *Ethics* 75,227-239 Jl 65.

WILD, John. Barber's Realistic Analysis Of Possibility. *Rev Metaph* 6,487-500 Mr 53.

WILD, John. Being, Meaning And The World. *Rev Metaph* 18,411-429 Mr 65.

Heidegger maintains that being is the primary factor from which world and meaning derive. In response, the author argues that the more encompassing notion of world horizon is prior to being and meaning. To establish his thesis, he elucidates the basic differences between the notions of world and being in common usage, shows that two senses of being presuppose the world, and explains the experiences of wonder and absurdity in terms of the independence of being and meaning. He concludes that perhaps the great philosophical error of the past is a forgetfulness not of being but of the world.

- WILD, John.** Reply To Professor Frankena's "J D Wild On Responsibility". *Phil Phenomenol Res* 27,97-102 S 66.
Wild defends Aristotle's distinction—that, if the causes of an act lie outside the agent, then they are forced upon him. If the causes are his own desires (within him) then they are voluntary acts and he is responsible. Wild argues that freedom and responsibility are opposed to compulsion and entail internal causation. One should therefore distinguish voluntary acts from compulsive acts solely on the basis of two kinds of causation. He concludes that responsibility is a certain type of internal causation, caused with intention (meaning), and the normative is within this world of meaning.

- WILD, John.** The Concept Of Existence. *Monist* 50,1-16 Ja 66.
Existence differs from other concepts in avoiding certain traditional dichotomies which apply to them. For example, it is neither objective nor subjective in its reference, neither actual nor possible, neither individual nor universal, but in each case, both. Lived existence cannot be explained nor taken over by any conceptual system. It can be clarified by a radically empirical method which appeals to feeling and perception as well as conceptual thought. This method has been able to shed a new light on certain patterns of existence such as being-in-the-world, the lived body, responsibility, and freedom. In general ontology, it is developing a new view according to which being and meaning are not necessarily but only contingently joined.

- WILHELMSEN, Frederick D.** *The Metaphysics Of Love*. NY Sheed & Ward 1962.
This book ranges over many problems: the meaning of existence and human life, the differences of national and religious cultures. The author is as much at home in theistic existentialism as he is in traditional Thomism. Running through the book is the theme that being is not a static, logical category but the concrete openness of one person to another. Thus considered, being tends toward a climax of love. wilhelmsen contrasts classical metaphysics and Christian existentialism. Two contemporary Spaniards, Ortega y Gasset and Xavier Zubiri, illustrate one way of approaching being through love. The conclusion is: a Catholic vision of love is distinct from a Protestant one, because Catholicism is based on a societal, rather than a personal, view of love.

This is an exposition and sympathetic assessment of Hegel's philosophy of history. The first chapter seeks to clarify the relationship between the various forms of historians' history and philosophical history. Chapter Two construes the relationship of philosophical to non-philosophical history in terms of Hegel's view of the relationship between mechanism and teleology in the *Logic*. The final chapter involves analyses of Hegel's understanding of possibility, causality, the difference between externally and self determined entities, and the relationship between scientific and philosophical explanation.

- WILKINS, Burleigh Taylor.** Nagel's Critique Of Psychoanalysis. *Phil Phenomenol Res* 24,383-396 Mr 64.
Nagel examines the logical structure and empirical content of psychoanalytic theory, as well as the nature of the evidence used to support the theory. He opposes Freudian theory in its structure and in its basic assumptions concerning the nature of human conduct. He points out the difficulty in deducing determinate consequences from the theory and objects to the way in which the theoretical notions are related to observable materials by correspondence rules. Finally, he criticizes the assumptions that all conduct is motivated or wish-fulfilling, and that there are unconscious motives.

- WILL, Frederic.** Aristotle And The Question Of Character In Literature. *Rev Metaph* 14,353-359 D 60.
The author contends that Aristotle's failure in the *Poetics* to clarify his views on the relation between plot and character constitutes a serious weakness in his theory of tragedy. After stating Aristotle's position on plot (mythos), action (praxis), and character (ethos), he examines this weakness. He then investigates proposed analogies between the unity of plot and character in tragedy, on the one hand, and the structure of existence, on the other, and suggests that character is its actions.

- WILL, Frederick L.** *Induction And Justification: An Investigation Of Cartesian Procedure In The Philosophy Of Knowledge*. Ithaca NY Cornell Univ Pr 1974.
Will argues that rationalism and empiricism both suppose that knowledge is grounded in intuition and developed by expanding it. But this makes most knowledge impossible: e.g., induction. Actually, knowledge claims are not to be justified by a linear chain of previous claims, but by a variety of grounds and techniques. Justification theory assumes that all knowledge can be scrutinized simultaneously. Rather, the philosopher must seek a broad, coherent account of the practices of cognitive disciplines. For even basic intuitions involve complex social practices; and all knowledge is subject to revision, even the most fundamental. The practices in a discipline resemble a political constitution: it can answer many questions, but sometimes it must be changed. Doing so rationally requires information about the practices in question. Decisions about the rationality of practices necessarily involves other practices; and they, too, might at some time have to be re-examined.
- WILL, Frederick L.** Consequences And Confirmation. *Phil Rev* 75,34-58 Ja 66.
There is a traditional argument in the philosophy of induction designed to establish, by means of a simple principle in the calculus of probability, the thesis that, under certain canonical conditions C, a law is confirmed (i.e., its probability is increased) with an increasing number of positive instances. This thesis is criticized here by an argument utilizing the very principle that has been traditionally employed in its support. The principle does not validate the thesis, according to the argument. Rather, if it can be relied upon in the matter, it shows that the thesis cannot logically be maintained.

- WILL, Frederick L.** Intention, Error, And Responsibility. *J Phil* 61,171-178 F 64.
G E M Anscombe (*Journal of Philosophy*, Volume 60,1963) raises what seems to her a difficulty embedded in the rationale of exoneration in those cases in which the grounds for exoneration are ignorance of law or moral principle, in contrast to ignorance of fact. The contention is that Anscombe's problem is a gratuitous one, arising from a mistaken analysis of certain terms employed in imputing action and responsibility to agents. Correcting this error dissolves the difficulty for maintaining, as Anscombe wishes to maintain, that the rationale of exoneration is basically the same in both cases.

- WILEY, Basil.** The Eighteenth Century Background: Studies On The Idea Of Nature In The Thought Of The Period. NY Columbia Univ Pr 1941.
- This is a study of the development of the idea of "nature" in various eighteenth and early nineteenth century writers in the fields of religion, ethics, philosophy and politics. Though not strictly speaking a history of this almost magical idea, the book covers the most important writers of the period and shows the various shifts in meaning which the term underwent. It covers the thought of such men as the various Deists, Shaftesbury, Joseph Butler, the satirists, Hume, Hartley, Holbach, Priestley, the Revolutionists and their critics, and Wordsworth.
- WILLHOITE JR, Fred H.** Beyond Nihilism: Albert Camus's Contribution To Political Thought. Baton Rouge 1968.
- According to the author, Camus was not a systematic thinker, but nevertheless was one who believed we could discover norms for ourselves when authoritarian ones vanished. True rebellion continues to develop new norms fitting to man's continuous experience. Camus's main thrust is against any form of totalist ideology that cripples free dialogue and expansion of consciousness.

- WILLIAMS, Bernard A O.** Morality: An Introduction To Ethics. NY Harper & Row 1972.
- From the start B Williams (Cambridge University) states that he "offers no systematic theory" of ethics. His book is a critical review of several positions popular in British moral philosophy: amoralism, subjectivism, relativism and theological approbation are discussed and then dismissed as inadequate. Examination of the notion of human well-being leads to a final consideration of utilitarianism, in Bentham's sense. The reader is led to expect that utilitarianism will be approved but Williams keeps his promise and finally rejects both act- and rule-utilitarianism.

- WILLIAMS, Donald C.** Dispensing With Existence. *J Phil* 59,748-762 N 62.
- The one certainty, said Parmenides, is that Being is and not-being is not. But the thesis here is that Being is not, though it is granted to Parmenides that not-being is not either. There is no Being or Existence as such. Though it has become customary to translate statements about "something" into statements ostentatiously existential, it is suggested that the notion of something is the ontologically prior and correct one and that we should work on dispensing Existence in its favor.

- WILLIAMS, Donald C.** Necessary Facts. *Rev Metaph* 16,601-626 Je 63.
- The author argues that there are, as of necessity, necessary facts about the world. To explain his position, he first distinguishes facts from objects and analyzes intrinsic partitive and comparative relations and extrinsic relations of spatio-temporal location. He then discusses necessity, contingency, and entailment in terms of the categories of relation thus defined, and examines the distinctions between abstracts and universals and between the concrete and the general. He concludes with remarks on recent conventionalist theories of the a priori and on essence and existence.

- The conception of hedonism presented by Professor W H Sheldon in *The Journal of Philosophy*, Volume XLVII, Number 10 is considered in this article. The author considers Sheldon's view similar to Mill's view in that each forsakes "the principle that good and duty are always relative to some individual point of view." He advocates the position that an ethical system must be hedonic as well as being an individual relativism.

- The article defines "right" as that which is most deeply satisfactory to an individual in the long run, and "good" as the satisfactory joy and loss of suffering. It is proposed that a theory of hedonic ethical relativism makes man's moral experience more intelligible than any alternative axiological system. One must combine an interest theory of value with some of Epicurus and some of Utilitarianism.

- WILLIAMS, Henry Horace.** *Logic For Living, Lectures Of 1921-22* (edited By Jane Ross Hammer). NY Philosophical Lib 1951.
- Horace Williams teaches more than the logic of Hegel—which he does most ably and not uncritically. He uses the events of the day in the college environment to frame in Socratic fashion a true "Logic for Living" that reverberated in the novels of Thomas Wolfe, the opinions of Judge John Parker and in the academic and political career of many other noted students. Nature, history, logic of quality, quantity and relation and their import upon government, law, religion and life as a whole all unfold before the reader as if he were under the spell of the classroom.

- WILLIAMS, William Carlos.** *The Embodiment Of Knowledge,* Ron Loewinsohn (ed). NY New Directions 1974.
- Essays dedicated to his sons, prose essays, and five philosophical essays express the originating root convictions of Williams the poet: knowledge as bodily assimilation and mastery, the primacy of words in "the modern primer", grotesque and shameful Science and Philosophy, clarity, wholeness, sad scholars, living vivid speech, the formation of personal integrity by sensory contact with things and people and by symbols, knowledge of "place," knowledge by art, seeing and appreciating and praising, and knowledge for love. Shakespeare as writer is the paragon of human knowledge: "His words are knowledge in themselves."
- WILLIAMSON, John.** Realization And Unconscious Inference. *Phil Phenomenol Res* 27,11-26 S 66.
- Two things are attempted here: to explore the relation between realizing, inferring, perceiving, remembering, and being conscious; and to argue that equating normal visual perception with unconscious inference is a *prima facie* absurdity. A few cases are discussed to show that realizing is a mental event that can sometimes but not always be identified with perceiving, with inferring, or with not-forgetting. A borderline case is described in order to maximize the temptation to identify perceiving with inferring. Some reasons are given for saying that it is hard to make sense of the notion of unconscious inference, especially if ordinary visual perception is claimed to be an instance of it.
- WILLNER, Dorothy.** *Decisions, Values And Groups, VI.* NY Pergamon Pr 1960.
- This volume consists of a collection of papers written by behavioral scientists and philosophers. Five groups of papers are included on the following topics: mathematical models in decision making; designs for research on values; the theory of small group research; psychodynamic patterns of behavior; and special military problems. The general aim of the group was to help develop an empirical theory of human behavior.

- WILSON, Edmund** and others. *The Intent Of The Critic,* Donald A Stauffer (ed). Princeton NJ Princeton Univ Pr 1941.
- This collection of essays provides an excellent cross section of serious literary criticism today. The essays contain crucial conflicts but also express basic agreements which Professor Stauffer seeks to analyze in his introductory essay. Professor Stauffer himself lays primary stress on the work of art, though he does not minimize the part which other interests play in esthetic experience, nor the necessity of the critic to set up standards and attempt to judge. "No man is a literary critic, excellent though he be as esthetician, scholar, or creative artist, in whose writings our primary pleasure does not spring from seeing specific works of art more clearly, easily, or completely."

- WILSON, Fred.** Implicit Definition Once Again. *J Phil* 62,364-373 JI 65.
- The claim that uninterpreted axioms "implicitly define" the primitive descriptive signs they contain could only be based on the belief that there exists some fairly close analogy between a sign's being defined and a sign's occurring as primitive in an axiomatic system. In Part I, I show that the two kinds of "definition," so-called, differ in two respects which are so crucial that the use of the same word cannot but be misleading: Quine has recently presented himself as a defender of "implicit definition." However, his real purpose is to argue that the analytic-synthetic distinction cannot be explicated. He claims to be able to find for every true scientific theory an axiomatic development of the same theory whose truths follow deductively from those of arithmetic. In Part II distinctions are made which show that the two axiomatic developments are *not* of the same theory. Thus, Quine's argument fails.
- WILSON, George Arthur.** *Reckoning With Life.* New Haven Yale Univ Pr 1942.
- The first two parts, entitled respectively "Nature" and "Ourselves," deal mainly with epistemological topics. Part III deals with "Some Basic Enigmas," namely, with the problems of evil, immortality and ontological being.
- WILSON, George Arthur.** *Reckoning With Life.* New Haven Yale Univ Pr 1942.
- Reckoning with Life* is a considered statement of the author's reasons for believing that "life as a whole has a meaning which can give assurance and direction." The first third of the book consists of an analysis of the implications of sense perception. They are, according to Professor Wilson, that the human perceiver is faced by a cosmic power which is a unity that "must know what it is doing." The second deals with "Ourselves," concluding that the self is "a unique unity," but not a substance in the usual sense, which must remain a mystery to the objectively minded intellect. In Part Three, "Some Basic Enigmas," the author wrestles with the speculative problems of evil, immortality, and "ultimately real."
- WILSON, H Van Rensselaer.** Causal Discontinuity In Fatalism And Indeterminism. *J Phil* 52,70-71 F 55.
- WILSON, Harold S.** Some Meanings Of "Nature" In Renaissance Literary Theory. *J Hist Ideas* 2,430-448 O 41.
- WILSON, Hugh Van Rensselaer.** How Valid Is Jordan's Disillusionment With Life And Thought? *Ethics* 66,279-283 JI 56.
- WILSON, Jerry B.** *Death By Decision: The Medical, Moral, And Legal Dilemmas Of Euthanasia.* Philadelphia Westminster Pr 1975.
- This book explores the medical, legal, and moral dilemmas of euthanasia. Wilson argues from the perspective of a morality of theocentric love which seeks to serve the needs of the patient as a person. Wilson's account is especially helpful in citing numerous legal precedents in which euthanasia has been leniently handled.
- WILSON, John B.** An Analogue Of Transcendentalism. *J Hist Ideas* 27,459-461 JI-S 66.
- WILSON, John B.** Darwin And The Transcendentalists. *J Hist Ideas* 26,286-290 Ap-Je 65.
- The author here describes the first encounters of the transcendentalists with Darwinism. Early transcendental views were favorable, for they saw Darwin as

- embodying idealism; later transcendentalist interpretations of Darwin rejected him for opposing idealism. The article also includes a discussion of the relationship of transcendentalism to science. As a group, transcendentalists did not dismiss science easily, but tried to incorporate the new science into transcendental thought.
- WILSON, John.** *Language And The Pursuit Of Truth.* NY Cambridge Univ Pr 1956.

- WILSON, M T.** *Shelley's Later Poetry.* NY Columbia Univ Pr 1957.
- WILSON, N L.** Class Identity As Presupposing Individual Identity. *Phil Stud* 11,55-57 1960.
- This article attempts to lay down identity conditions for individuals. The author challenges the space-time view, pointing out that it involves treating time as a dimension on a par with the three spatial dimensions. He argues that it makes sense to talk about one mile east, one mile north, and one mile up, but it does not make sense to talk about one mile earlier. Therefore, he concludes, time is not a dimension "just like" a spatial dimension. He suggests that the substance view of individuation will ultimately prove to be the right one.

- WILSON, N L.** Reply To Professor Rescher's "Identity, Substitution, And Modality". *Rev Metaph* 14,714-720 Je 61.
- In his 1960 review article, "Identity, Substitution, and Modality," Nicholas Rescher wrote that the primary aim of N L Wilson's book, *The Concept of Language* (Toronto, 1959), was an attack on the logic of modality on the ground of its clash with Leibniz's Rule. He further professed to find a lack of fundamental or thematic unity in the book. The author responds to these and other charges by tracing the logical development of his chapters, discussing his notion of propositions, and clarifying his views, in opposition to Rescher's, on modal logic.

- WILSON, Patrick.** The Need To Justify. *Monist* 50,267-280 Ap 66.
- Must we justify things? Which things need justifying? What constitutes a justification? Wilson outlines a possible method of justifying aesthetic values and concludes probably no final argument can be given for one particular way of justifying. But if "good" and "bad" are translated into "likes" and "dislikes" no justification is required. One justifies then only if one feels the need. Choice of method will depend on whichever method allows one to feel all right.

- F E Sparshott describes *The Structure of Aesthetics* (Toronto and London, 1963) as a pluralistic guide to aesthetic issues and arguments. In this critical study, however, the author argues that, despite its seeming objectivity as a reasoned catalogue of opinions, Sparshott's work implicitly advances an aesthetic theory of its own. In support of his interpretation, he examines Sparshott's polar concepts of representation (or reference), form, and expression as descriptive aspects of the work of art.

- WINCH, Peter.** Understanding A Primitive Society. *Amer Phil Quart* 1,307-324 O 64.
- If the institutions and practices of a primitive society are understood by its members according to criteria of intelligibility which are very remote from those in terms of which a western social anthropologist tries to understand things, what will count as an understanding of those institutions by him? What sort of lesson can we learn from the study of such societies? These questions are discussed first by way of a criticism of E E Evans-Pritchard's *Witchcraft, Oracles and Magic among the Azande*, in which an attempt is made to bring out some of the confusions involved in assessing the rationality of something like Zande witchcraft by reference to western scientific and technological standards. An attempt is then made to meet objections made by Alasdair MacIntyre against the account of social action offered in the author's *The Idea of a Social Science*. Finally, some suggestions are made on how to develop certain of Vico's ideas on the distinction between what is universal and what is transitory in human social life.
- WINCH, Peter.** Universalizability Of Moral Judgements. *Monist* 49,196-214 Ap 65.
- Sidgwick's theses that "if I judge any action to be right for myself, I implicitly judge it to be right for any other person whose nature and circumstances do not differ from my own in certain important respects" fails to differentiate moral judgments of importantly different kinds and, in particular, overlooks peculiarities of a kind of judgment, made by a prospective agent, about what he ought to do. The court-martial in Melville's *Billy Budd* is closely examined as an example. Although we can speak of such an agent "finding out" what he ought to do, he is not finding out what anyone ought to do in such a situation, but something about himself: something, however, which can only be expressed in moral categories.

- The objective of this important contribution to the growing literature of the sociology of knowledge is to present the philosophy of Plato in its socio-historical matrix, with the double purpose—if one is to judge by the effect—of illuminating the Platonic concepts and of illustrating the importance of sociological method in the writing of history of philosophy. In fulfillment of his objective the author finds it necessary to begin his study with the age of the Epic. The book is thus a fairly comprehensive sociological analysis of Greek religious and philosophical thought from Homer to Aristotle.

- Part I analyzes seven modes of philosophizing: (1) Metascience, (2) Epistemology, (3) Ontology of science, (4) Parascientific ontology, (5) Cosmological ontology, (6) "Meta-Ontological Negativism," and (7) Philosophy also means the life style of the ideas we live by. Part II is an extended criticism of these modes. Part III looks at the goals of optimists and pessimists, rationalists and empiricists. Part IV suggests an eighth mode for philosophy today as a personal and social outlook.

- In non-ethical contexts judgments of value (i.e., "This is the right way to Granchester") are judgments of relative value, and can be converted to statements of fact. In ethics and religion, we find what appear to be judgments of *absolute* value. All such "judgments" turn out to be incoherent expressions, however. As attempts to say more than facts, they are attempts to go beyond the world, and so beyond the bounds of significant language.

- WOETZEL, Robert.** *The Philosophy Of Freedom.* NY Oceana 1966.
- This book is composed of two long essays, "Outline of a Philosophy of Freedom" and "Freedom in the Modern State"; an epilogue discussing the state of freedom in the United States and proposing a program of implementation of greater freedom in the United States; a transcription of a discussion of the author's views at the Center for the Study of Democratic Institutions; and appendices containing the texts of the Universal Declaration of Human Rights and of the European Convention for the Protection of Human Rights and Fundamental Freedoms. The first essay discusses individual rights in relation to government, economic planning, international struggles, and cultural values. The second essay looks at problems of freedom in a democratic state, a Roman republic (such as the DeGaulle regime), and a socialist state. Woetzel says in the discussion section, "The basic thesis is that man the individual is the be-all of all government; and the aim of man which I prefer perhaps *a priori*, is the quest for happiness—individual happiness according to standards which he chooses."

- WOLFARD, Merl R.** *Thinking About Thinking.* NY Philosophical Lib 1955.
- This book is a series of observations on a variety of epistemological and psychological themes aiming at two major conclusions: first, that the traditional materials employed in understanding mental processes can be rendered more productive if redefined in terms of mass-energy relationships; and second, that such a reconstruction reveals new validity criteria which suggest, among other things, that modern philosophic scepticism of whatever order can be shown to be untenable.
- WOLFE, Bertram D.** *Marxism: One Hundred Years In The Life Of A Doctrine.* NY Dial Pr 1965.
- Wolfe begins this book by stating that "of *Das Kapital*'s basic intellectual structure nothing now stands up." We also soon find that "there is no Leninist theory of imperialism either." On the other hand, "The materialist interpretation of history, once its monistic, reductionist claims are rejected, can contribute some useful insights to historical thought." Yet "Marxism fails to take account of this age-old nature of war itself." Throughout the book is a large collection of "marxist failures-to-predict." Marxism cannot explain other things: "Henri de Man records, 'my Marxism received a mortal blow, for it could not explain the behavior of the masses.'" Perhaps all this may be explained by what Wolfe calls "the natural authoritarianism of Marx's temperament?"

WOLFE, Don M. *The Image Of Man In America.* Dallas 1957.

The author claims that the American image of human nature is that of a plastic being capable of either cruelty or generosity, but that given the environmental opportunity he can develop for the best. He traces this theme in Jefferson, Emerson, Horace Mann, O W Holmes, Henry George, Veblen, James, Dewey, and others. He holds that the science of man in the future must uncover the roots of talent from which genius can emerge.

WOLFF, Kurt H (ed) and Moore, Barrington (ed). *The Critical Spirit: Essays In Honor Of Herbert Marcuse.* Boston Beacon Pr 1967.

The editors have brought together a number of essays written by twenty-five writers responding to major themes already treated in Marcuse's works or to challenges he has made central for others. The essays are written from independent points of view, sharing a common concern for issues and problems but not each other's proposed solutions. The essays are grouped in four parts as follows: 1) "The Political Concern of Philosophy," 2) "Art, Literature, and Society," 3) "Industrial Society and Its Plight," 4) "Marcuse as Teacher" and "Marcuse Bibliography."

WOLFF, Robert Paul. *In Defense Of Anarchism.* NY Harper & Row 1970.

This book deals with the problem of the State as normative. Political philosophy is the philosophy of the state. The authority of the State to command obedience conflicts irreducibly with the autonomy of the individual.

WOLFF, Robert Paul. *Kant's Theory Of Mental Activity: A Commentary On The Transcendental Analytic Of The Critique Of Pure Reason.* Cambridge Harvard Univ Pr 1963.

After an introduction which briefly describes the doctrine of the *Inaugural Dissertation of 1770* and the problem Kant set himself thereafter, Wolff addresses his exegesis to one main task: "Can an argument be found in the *Critique* which, beginning with the fact of consciousness, advances by a rigorous deduction to the validity of the law of causation?" The result is a step-by-step commentary on the *Transcendental Analytic*, that presents for each section in turn (1) a general statement of its place in the critical philosophy and in Kant's purposes (2), an outline of its doctrine and its function in this argument, and (3) certain specific textual explanations, especially of difficulties or inconsistencies. This is nothing like a complete commentary or explanation, but a careful presentation of a sequential argument.

WOLFF, Robert Paul. *The Autonomy Of Reason: A Commentary On Kant's Groundwork Of The Metaphysic Of Morals.* NY Harper & Row 1973.

This commentary gives special attention to reconciling Kant's ethical position with the first *Critique's* doctrines concerning causation and the restriction of knowledge to the phenomenal world. Kant's references to the conflict between reason and desire, duty and inclination, are examined against the background of his competing characterization of all willing as rational with the latter doctrine being taken to be the more defensible one. Kant's position is taken as most correct in seeing that morality must have an *a priori* ground and that the major problem is to reconcile the causally deterministic with the moral account of human action.

WOLFF, Robert Paul. *The Poverty Of Liberalism.* Boston Beacon Pr 1968.

WOLFF, Robert Paul. A Refutation Of Rawls' Theorem On Justice. *J Phil* 63,179-190 Mr 66.

John Rawls, in "Justice as Fairness," offers two principles which he says constitute the content of our concept of justice as it applies to institutions. As evidence for the analysis he asserts as a theorem that a society of rationally self-interested agents, convened to settle by unanimous agreement upon principles for the resolution of all future disputes over their practices, would necessarily choose those same principles after a period of bargaining. The theorem is false. The principles actually define a notion "more just than" which is inadequate to sort alternative proposals into a unique and complete ordering, and hence could not be used to settle disputes. Furthermore, even if the principles were satisfactory, they would not be chosen by individuals of the sort Rawls describes. The inadequacies of the supposed theorem also reveal that Rawls has committed the familiar utilitarian error of confusing justice with welfare.

WOLFSON, Harry Austryn. *The Philosophy Of The Church Fathers, Volume I: Faith, Trinity, Incarnation.* Cambridge Harvard Univ Pr 1956.

A monumental work of scholarship, consisting of thorough and comprehensive treatments of four relatively distinct motifs in the thought of the early Church Fathers. Part One deals with the origin of the problem of faith and reason, together with the various solutions proposed; Part Two treats the Trinity, the Logos, and Platonic Ideas; Part Three examines the three Christian "mysteries"—the Trinity, the Incarnation, and the generation of the Logos; and Part Four details the rise of the heresies, particularly gnosticism. This is a work of exposition rather than of philosophical evaluation; but its scope and detail make it an indispensable starting-point for any future effort to appraise the thought of the early Church Fathers.

WOLGAST, Elizabeth H. A Question About Colors. *Phil Rev* 71,328-339 JI 62.

Wolgast discusses our generic notion of colors, e.g., our notion of blue which covers the color of a material object like a wall, apparent colors like the blue of the sky or of a reflection, and the color of something blue in our memory. She asks how we can compare these colors when we cannot put them side by side to look at them. Her answer is that to say of a material object and of the sky that they are both of the same color is to say that they have similar descriptions.

WOLGAST, Elizabeth H. The Experience In Perception. *Phil Rev* 69,165-182 Ap 60.

WOLIN, Sheldon S. *Politics And Vision: Continuity And Innovation In Western Political Thought.* Boston Little Brown 1960.

This book is written in defense of traditional political philosophy. The author surveys the broad sweep of political philosophizing from Plato to the present. The theme is "that political theory must once again be viewed as that form of knowledge which deals with what is general and integrative to men, a life of common involvements." The thesis is developed by interpretative and evaluative commentary on many of the greats. The author thinks that there have been four sets of answers to the fundamental questions of political obligation: Platonic, Christian, Liberal, and Pluralist. Each set is developed with emphasis and approach appropriate to the period of discussion. This is an original book.

WOLLHEIM, Richard. *Art And Its Objects, An Introduction To Aesthetics.* NY Harper And Row 1968.

The traditional question "What is art?" is answered, in 65 short, highly compressed sections, in an untraditional way. Though we cannot say for all X what an X is, we can recognize an X and say what it is not, and why not, when offered a false, misleading, or distorting definition, the X's here being instances of works of art. The argument develops from consideration of the denial of the hypothesis that works of art are physical objects, that is, of the two claims that (a) it is clearly true of some works of art that they cannot be plausibly identified with physical objects, and (b) works of other kinds have been wrongly identified with what are indisputably physical objects. The (b) raises the issue of ascription of representational and expressive properties to art works.

WOLLHEIM, Richard. Democracy. *J Hist Ideas* 19,225-242 Ap 58.

WOLMAN, Benjamin (ed) and Nagel, Ernest (ed). *Scientific Psychology, Principles And Approaches.* NY Basic Books 1965.

This volume thus attempts to bring about a rapprochement between scientific psychology and the philosophy of science. Thirty well-known philosophers and psychologists focus their attention on a number of current issues: how do the schools of contemporary psychology relate to pragmatism, behaviorism, analytic philosophy and existentialism? what are some key questions in social psychology, learning theory, psychoanalysis, testing, animal behavior, neuro-psychology, perception, information theory, and predictability in human behavior?

WOLMAN, Benjamin B. *Contemporary Theories And Systems In Psychology.* NY Harper 1960.

This volume presents a comprehensive account of contemporary psychological theory. Priority is given to general psychological theory and to methodological concepts, such as concept formation, methods of research, relationships to other sciences, and interpretations of empirical data. Part I deals with theories which have a natural science orientation (Pavlov, Watson, etc.); Part II with psychoanalytic theories (Adler, Jung, Fromm, Rank, etc.); Part III with the theories influenced by Kant, Windelband, Husserl, Dilthey and the Cultural Sciences (Spranger, Stern, Allport, Lewin). In Part IV on Scientific Method the author presents his own philosophy of psychology. This is largely a defence of experimentalism, "transitionism" in answer to reductionism (i.e., the continuous transition of organic life from one stage to another), "the lust for life," a "three level" theory of motivation, and a bio-social theory of personality.

- WOLTER, Allan B.** The Realism Of Scotus. *J Phil* 59,725–735 N 62.
According to the realism of Duns Scotus, the specific nature of an existing individual possesses a unity that is real but less than numerical. This view is based on another of Scotus's theories, that between the individual's nature and that positive and unique feature that differentiates it from all other individuals is a formal distinction. The paper explains in detail the formal distinction in question and then turns to a discussion of what Scotus says of the formal constitution of the individual. A twofold problem for Scotus is that he must explain why this nature is individual in reality and universal in the mind.

- WOLTERSTORFF, Nicholas.** *On Universals: An Essay In Ontology.* Chicago Chicago Univ Pr 1970.
In Part I, N Wolterstorff distinguishes subjects from predicates and general terms from singular. In Part II he argues that there are non-linguistic predicable entities, defending the principle that "if something is-*f*, then there is such a thing as *f*-ity." States and actions as well as properties, he says, are predicables. In Part III he maintains that such things as symphonies and books are universals: not predicable universals but *substance* universals. In Part IV, Wolterstorff denies that universals are either paradigms, exemplars or perfect copies of themselves.
- WOLTERSTORFF, Nicholas** and Fleming, Noel. On 'There Is'. *Phil Stud* 11,41–48 1960.
The authors attempt to show that 'there is' and 'exists' are not univocal terms, and that 'there is' does not always mean the same as 'exists'. They give examples of three different uses of 'there is': (1) one in which it is synonymous with 'exists', (2) one in which it is not the same as 'exists', (3) one which is ambiguous. Evidence that they are not the same can be found, according to the authors, in the fact that it is true that there are things that don't exist, such as unicorns.
- WOLTERSTORFF, Nicholas.** Are Properties Meanings? *J Phil* 57,277–280 Ap 60.
Against Quine and Carnap, the author argues that the identity of properties and attributes is not determined by the meanings of terms. In the traditional sense, then, properties and attributes are not intensional entities; they are intensional only if an intensional entity is one whose identity is not determined by the entity or entities which possess it.

- WOLZ, Henry G.** The Protagoras Myth And The Philosopher-Kings. *Rev Metaph* 17,214–234 D 63.
According to a prevailing view, Plato resorted to myth only when he reached the higher realms of truth where dialectical argument and ordinary language prove inadequate. The author contests this rigid conception of the relationship between mythos and logos in the dialogues. Specifically, he argues in this study that the Protagoras myth, like the idea of the good and the role of the philosopher-kings in the Republic, is an extrapolation meant to lead from the empirical to the transempirical, not in order to attain absolute truth, but to illuminate the human condition.

- WOOD, Allen W.** *Kant's Moral Religion.* Ithaca NY Cornell Univ Pr 1970.
The study attempts to demonstrate the basic consistency of Kant's theory of religion with the fundamentals of critical thinking. Following Heidegger's interpretation of Kant, Wood insists that Kant's moral faith is based on his conviction of man's finitude of both reason and will, and thus human sensibility, as condition of both moral life and empirical knowledge. The test of this thesis is a discussion of radical evil and divine grace.
- WOOD, Ernest E.** *The Glorious Presence; A Study Of The Vedanta Philosophy And Its Relation To Modern Thought.* NY Dutton 1951.
In this volume, Professor Wood offers a study of the Vedanta philosophy as exemplified by the teachings of Shankara. The general philosophical statement and the methods for maturing the mind and attaining the Wisdom, as distinct from Knowledge, constitute the first two sections of the book. The third section contains a translation in full, and a commentary on Shankara's nine meditations on the South Facing Form. The final section is a comparison of Vedanta with other schools of thought, including chapters on Greek philosophy, German Idealism, British Realism, and American Modernism.

- WOOD, Robert E.** *Martin Buber's Ontology: An Analysis Of I And Thou.* Evanston IL 1969.
The center of this book is a section-by-section commentary on Buber's *I and Thou*. Other works of Buber receive attention mainly insofar as they attempt to clarify or develop the themes discussed in *I and Thou*. Buber's intention to build, out of his own experience, a descriptive philosophical anthropology is founded on ontological assumptions.

- WOOD, Robert.** *Principles And Problems Of Ethics.* St Louis Herder 1962.
- WOODBIDGE, Frederick J E.** *An Essay On Nature.* NY Columbia Univ Pr 1940.
What is Nature? To Woolbridge, the question is crucial for the total enterprise of inquiry. It is, indeed, the philosopher's question. He perceived its primacy with the direct vision of the Greek. He phrased the question in many ways, and with disarming but intentional simplicity. The sciences, the many sciences, are concerned with Nature.

- WORKMAN, Rollin W.** Two Extralogical Uses Of The Principle Of Induction. *Phil Stud* 13,27–32 1962.
The article goes into the ontological and epistemological ways in which the principle of induction is used. Concerning the ontological, the author examines the "determinism"–"indeterminism" argument, introducing a class of events which he calls "adetermined", viz., those which take place "naturally." These are described as uncased but not indetermined. Concerning the epistemological, he offers objections to it as it has been traditionally formulated and points to recent reformulations such as "Similar groups of objects behave in similar ways though similar objects themselves do not."

- WORSFOLD, Victor L.** A Philosophical Justification Of Children's Rights. *Harvard Educational Review* 44,142-157 1974.
The author discusses the status of children's rights according to various philosophical conceptions of social justice. He describes three traditional paternalist views of children and concludes that, on the whole, they are discouraging in their implications for children. After analyzing some of the difficulties of previous philosophical attempts to create systems of justice ensuring children's rights the author sets forth three criteria which any adequate justification for children's rights must fulfill. He argues that these criteria are best met within the theory of justice proposed by John Rawls which, while still paternalistic, presents a more adequate framework for securing children's rights to fair treatment.

- WRENN, Harold Holmes** and Boas, George. *What Is A Picture?* Pittsburgh Pittsburgh Univ Pr 1964.
What is a picture? The authors attempt to answer this question by discussing a picture as design, as representation, as interpretation, as allegory, and as emblem. They conclude that a painting is a complex phenomenon which may fulfill an unlimited combination of purposes. Since painting means different things to different people, no one can be forced to see what the artist intended. The viewpoint of the artist and the observer must be kept distinct, and the observer has to interpret a picture for himself and classify it as he wishes in relation to his own interests. Furthermore, the critic must recognize that paintings are rarely completely good or bad regardless of the standards of excellence employed. Thus Boas and Wrenn offer a relativistic answer to the question posed—a picture is what the observer sees it as being at a given time in a given period. No absolute rules exist which establish what a picture should be.
- WRIGHT, Andrew H.** Irony And Fiction. *J Aes Art Crit* 12,111-118 S 53.
- WRIGHT, Arthur (ed)** and Twitchett, Denis (ed). *The Confucian Personalities.* Stanford CA Stanford Univ Pr 1962.
This is the fifth and final symposium volume presented by the Committee on Chinese Thought of the Association for Asian Studies. Earlier studies treated Confucianism in its relation to various institutions and the political process, or showed how Confucianism has appeared in diverse aspects of Chinese culture. The present volume studies the effects of Confucianism in the lives of twelve important Confucians between the sixth and twentieth centuries. Obscure periods and aspects of Chinese history also receive attention. The symposiasts are twelve distinguished scholars from five countries.
- WRIGHT, Arthur F (ed).** *The Confucian Persuasion.* Stanford CA Stanford Univ Pr 1960.
This volume attempts "a further exploration of the interrelations of Confucianism and the civilization it dominated for so many centuries." Ten scholars contribute essays designed to clarify the role of the traditional Confucian ideal, "the perfected man living in a stable harmonious socio-political order," as it manifested itself throughout the civilization of China. The book further seeks to trace Confucianism as a traditional morality and to show how it dealt with rebel and protest movements. Finally, the inability of the tradition to withstand modern pressures exerted upon it is discussed at some length.

Given the drastic revision since the turn of the century of basic concepts in science the author, writing mostly as a geneticist, asks about the impact of that revision on philosophy, with particular focus on the question of other minds, especially the minds of lower organisms. After discussing specific problems in biology and genetics, together with philosophical questions of mind and matter, freedom of will, and methodology, the author (leaning throughout toward panpsychism) draws certain conclusions regarding the limitations of science.

- WYLLER, Egil A.** Plato's *Parmenides*: Another Interpretation. *Rev Metaph* 15,621-646 Je 62.
This article is a synopsis of the author's book, *Platons Dialog Parmenides in seinem Zusammenhang mit Symposium und Politeia* (Oslo, 1960). Noting that Plato enunciated formal rules for intellectual work, he proposes to analyze the fundamental triadic structure the *Parmenides* assertedly has in common with other Platonic dialogues. The author first argues that questions raised in the first part are reformulated in the second and answered in the third. He then argues for a further dyadic articulation of the dialogue, maintaining that the two symmetrical and inversely proportional paths of the logos of the *Parmenides* represent a dialectical ascent and descent.
- WYMAN, Mary A.** *The Lure For Feeling In The Creative Process.* NY Philosophical Lib 1960.
The Whiteheadian phrase, "lure for feeling," translated freely as the urge for God in the universe, generating artistic creativity and mystical experience, is the unifying theme of the author's explorations in literature and philosophy. In the opening study on *anima mundi* in Chinese mysticism and the poetry of Wordsworth the author sets the theme for the remaining four studies, in which "striking similarities" between the thought of Emerson, Goethe, Whitman, Burroughs, Wordsworth and Whitehead are presented. In these studies the author's "underlying purpose has been to reach a clearer understanding of Whitehead's metaphysical theories." A glossary of Whiteheadian terms is included.

- WYSCHOGROD, Michael.** *Kierkegaard And Heidegger: The Ontology Of Existence.* NY Humanities Pr 1954.
The exposition centers around the sense of factuality that dominates the human situation in contrast to the equally strong awareness of some eternal Pure Being. This ontological tension, implicit in Kierkegaard and explicit in Heidegger, is discussed in terms of their reinterpretations of the traditional ontologies, both of a graded Being-continuum (Platonic) and of an essence-existence dichotomy (Thomistic). In this context, the ontological relation of truth and value to both human existence and Pure Being is examined. Point-to-point documentation and an extensive primary and secondary bibliography are provided.

YALDEN-THOMSON, D. C. Remarks About Philosophical Refutations. *Monist* 48,501-512 O 64.

This paper is concerned with certain difficulties which stand in the way of refutation of any philosophical contention. It is argued that the gap between the notations of formal logics and ordinary discourse is a more profound obstacle to the establishing of, for example, contradictions in philosophical writings than is generally acknowledged. The intrinsic dubiety of appeals from verbal facts to non-verbal facts is also noted. The last part of the article is taken up with an examination of the infinite regress as a form of refutation. The conclusion is reached that this type of argument is liable to be less coercive than is commonly supposed.

YARTZ, Frank J and Larson, Allan L and Hassel, David J. *Progress And The Crisis Of Man*. Chicago Nelson-Hall 1976.

Progress and the Crisis of Man proceeds from concrete examples of progressiveness to a delineation of parameters within which a philosophy of progress is to be considered. Philosophers studied include Plato, Russell, and Marx. The book stresses that a philosophy of progress must be considered in the light of the social nature of man. *Technological progress* is considered with the recommendation that its value to man must be possessed to insure man's best control over his environment. *Secularism* is studied as a possible value orientation in the cultural development of an individual. One's value orientation not only determines the way one lives, but also influences those with whom one must relate.

YOLTON, John W. *John Locke And The Way Of Ideas*. NY Oxford Univ Pr 1956.

YOLTON, John W. *Thinking And Perceiving: A Study In The Philosophy Of Mind*. La Salle IL Open Court 1961.

The author criticizes "reductionist" tendencies in the accounts of "mind" given by Ryle, Wittgenstein, Mead and Merleau-Ponty. He draws on H H Price, F A Hayek, Piaget and the Würzburg school to defend a theory of "conceptual phenomenalism." He states: "to go all the way and talk of concepts as entities is to go a long way back in our contemporary philosophizing. I am convinced that the philosophy of mind will have to take the alternative if it is to be adequate to the phenomena of thinking and understanding.... In order to account for and to characterize the psychological states of the organism, we must not only speak of mental processes; we have also to accept mental entities." This view is grounded on the belief that thinking is "an emergent phenomenon whose conditions are laid in the physiological structure and responses of the organism and whose presence is a result of these earlier responses."

YOLTON, John W. A Metaphysic Of Experience. *Rev Metaph* 12,612-623 Je 59.

YOLTON, John W. Act And Circumstance. *J Phil* 59,337-350 Je 62.

A twofold defect inheres in recent analyses of action. (1) In the polemic against treating intentional terms of action as interior performances, as mental phenomena: none of the criticisms made by Melden or Anscombe is satisfactory; the absurdities

and difficulties they find in this way of talking about mental processes stem from their own failure to appreciate a philosophy of mind that offers a mentalist analysis of such processes. (2) In the concept of circumstances: circumstances contain, in a transmuted and implicit way, most, if not all, of the mentalist ingredients rejected in the polemic.

YOLTON, John W. Agent Causality. *Amer Phil Quart* 3,14-26 Ja 66.

Miss Anscombe has said that the notion of cause is in a state of too great confusion to be of much help in analyses of action. That confusion results from the analysis of cause as uniform and ordered sequence, as well as from the substitution of logical for causal relations. The talk of necessary relations between emotions and objects is an example of this substitution. Some progress towards a concept of cause more adequate for the agency of doing has been made in the discussions of practical knowledge, especially in some phenomenological approaches by Vesey, O'Shaughnessy, and Merleau-Ponty. Kant's metaphysic of agency, together with the notion of mental causation, leads us to the basic idea of cause as initiator of action. The "category" sense of cause is replaced by that of agent causation whenever Kant speaks of action.

YOLTON, John W. Sense-Data And Cartesian Doubt. *Phil Stud* 11,25-29 1960.

This article goes into the relation (or lack of relation) between psychology and epistemology. The author considers the Cartesian method of doubt, characterizing it as "extrascientific." In so characterizing it, he suggests that those philosophers of knowledge who invoke this method as a way of getting started have succeeded in their demands for beginning analysis without invoking scientific or everyday observations.

YOST JR, R M. Price On Appearing And Appearances. *J Phil* 61,328-333 My 64.

The article discusses H H Price's article "Appearing and Appearances" on the philosophy of perception, in which he described what he considers true and important in the old sense-datum theories and defends this valuable residuum against some common kinds of criticism. Yost is in sympathy with the main points of Price's defense of the residuum, but is unclear how Price would expect it to be redeveloped along proper lines.

YOST JR, R M. Professor Price On Perspectival Illusion. *Phil Rev* 71,202-217 Ap 62.

In his essay "The Argument from Illusion" (in *Contemporary British Philosophy*), Price tried to show that the alleged perspectival distortions of shape and size do not refute the direct realism of common sense. Yost criticizes Price on two counts: 1) he fails to provide an adequate analysis of "perspectival sense," and 2) he fails to indicate the sense in which a thing has or presents us with any shape-quality at all.

YOST, R M. *Leibniz And Philosophical Analysis*. Berkeley Univ Of Calif Pr 1954.

This work, based on contemporary techniques of "Philosophical Analysis," is an examination of Leibniz's use of similar procedures in the seventeenth century. Although, regarding analysis and clarification as present throughout the history of philosophy, the author sees the methods used in the seventeenth and eighteenth centuries (most ably by Leibniz and Hume) to clarify procedural difficulties and to provide analyses of important ideas as "very strikingly similar to those of the present." Sections of the book are devoted to analyses of perceptual fields, of other cognitive fields (memory, volitions, pleasures, desires and so on), of souls (and other monads), and of Leibniz's conception of an ideal language.

- YOUNG, William.** *Foundations Of Theory.* Nutley NJ Craig Pr 1967.
- After a survey of 'Theoria' in Classical Philosophy, and the usage of 'theory' as opposed to 'practice' and 'fact', certain criteria of theoretical thought and language are identified and the problem of the justification of theoretical thought is discussed. Circularity of presupposition as distinct from premises is shown not to be necessarily vicious. Agnosticism is shown by a modal argument to entail an anomaly, and an attempt is made by an analysis of the necessity of existence to exhibit the theistic foundation of theory with a coloration of the ontological argument.
- YOUNG, William.** *Hegel's Dialectical Method.* Nutley NJ Craig Pr 1972.
- The religious factor in Hegel's dialectical method is explored by tracing its original and early expression in the *Jugendchriften*, the *Natural Law Essay*, and the *Phenomenology*. After a preliminary study of the negative character of the dialectic, followed by a survey of the role of tragic fate in Hegel's maturing thought, the early theological writings are examined in detail with a view to exhibiting the source of the features of negativity and necessity in the dialectic. Hegel's early pantratism is concluded to be the root of his mature panlogism and Greek tragedy rather than the christian gospel the clue to the "secret."
- YOUNG, William.** *Toward A Reformed Philosophy: The Development Of A Protestant Philosophy In Dutch Calvinistic Thought Since The Time Of Abraham Kuyper.* Grand Rapids MI Piet Hein 1952.
- After four centuries of attempted adaptation of existing philosophies on the part of Protestant and particularly Calvinist thinkers, the attempt has been made by Professor Herman Dooyeweerd and his associates, in the line of Dr Abraham Kuyper, to develop a specifically Christian philosophy guided by Reformation principles. Dooyeweerd's Philosophy of the Cosmonomic Idea seeks an Archimedian point, not in autonomous human reason, but in the heart of man as the religious concentrations point of human existence. Philosophies rooted in standpoints of immanence or synthesis are subjected to a transcendental critique and found to issue in insoluble antinomies.

- ZABEEH, Farhang.** Ontological Argument And How And Why Some Speak Of God. *Phil Phenomenol Res* 22,206-215 D 61.
- The author asks three questions about Anselm's argument: 1) is the argument valid, 2) are the premises true, 3) are the premises tautologically or factually true. It is stated that a sound argument occurs when the argument is valid and the premises are factually true. Norman Malcolm discussion of the ontological argument is explored, and it is concluded that there is a difference between necessary statements and the one about God. The statement "God is a necessary being" is not necessary in the usual sense of logical implication.

- ZAKOPOULOS, Athenagoras N.** *Plato On Man.* NY Philosophical Lib 1975.
- The first part of this book discusses briefly the views of Homer, the Orphics, Heraclitus, the Pythagoreans, Empedocles, Anaxagoras and Socrates, on the nature of the psyche, the body, man's destiny and the issue of immortality. Plato's views are organized around such headings as problems of definition, accounts of the origins of the soul, its parts, its relationship to the body, and the idea of immortality. Two special appendices introduce comparative considerations between Platonic and contemporary views on the theory of man, mainly those of the psychoanalytic, behavioristic and humanistic psychologies of man.

- ZANER, Richard M.** An Approach To A Philosophical Anthropology. *Phil Phenomenol Res* 27,55-68 S 66.
- The "crisis" of man, emphasized by numerous thinkers, prompts the urgent re-asking of the question, what is man? This essay seeks to determine the sense of the question, and suggests an approach to the core phenomenon. It is argued that the question is not linguistic, empirical, or a quest for "properties" or "substance." Rather is it *ontological*: the "what-is-it?" question does not bear on the "what" but the "is." This question, however, turns back on the being of the asker, disclosing it as both subject and object, and as being reflexively aware of itself as such. The "mystery" of "human-being" is disclosed to be self-conscious subjectivity in quest of itself; the reflexivity of human-being is ontologically a *being-in-quest*, or *being-concerned*. This phenomenon, finally, is held to be publicly verifiable, and its philosophical articulation the central task of phenomenological anthropology.

- ZEMACH, Eddy.** Wittgenstein's Philosophy Of The Mystical. *Rev Metaph* 18,38-57 S 64.
- The author argues that what Wittgenstein says in the *tractatus* about "the mystical" depends heavily upon what he says about facts, objects, logic, and language, and that any interpretation which introduces alien mystical doctrines to clarify his intentions misses the mark. To establish his thesis, he first examines Wittgenstein's concepts of the world and the I as godheads. Within this metaphysical framework, he then discusses Wittgenstein's ethical theory, centering on his notions of happiness and the will, and considers the identity of the ethical and the aesthetic in Wittgenstein's early thought.

- ZIFF, Paul.** *Understanding Understanding.* Ithaca NY Cornell Univ Pr 1972.
- Continuing his work in *Semantic Analysis* Ziff confronts what he holds to be the presently insoluble problem of achieving an understanding of the kind of understanding which may function when something is said. In eight essays designed to be mutually supporting and charting some fixed points for further exploration of the area, he drives a series of illuminating analytic probes into crucial instances of understanding without claiming continuity among the results.
- ZIFF, Paul.** On What A Painting Represents. *J Phil* 57,647–653 S–O 60.
- The author raises the question: If a painting P is a representation of something A, what makes P a representation of A? Rejecting several theories of pictorial representation, the author suggests an answer in terms of sets of visual aspects.
- ZIFF, Paul.** The Nonsynonymy Of Active And Passive Sentences. *Phil Rev* 75,226–232 Ap 66.
- Ziff argues against the common belief that active sentences and their "corresponding" passive sentences are synonymous. Many counterexamples are given, in the form of pairs of "corresponding" active and passive sentences, which are not synonymous. The only reason people seem to have for believing in the synonymy of active and passive sentences, he suggests, is that, in many cases, one is true if and only if the other is true.
- ZIFF, Paul.** The Simplicity Of Other Minds. *J Phil* 62,575–584 O 65.
- The main problem concerning "other minds" is: "I have a mind, do I know whether others do and if I do how do I?" Ziff raises the question "What if I alone have a mind?" and points out the absurdity and futility in maintaining such a view. But if others have minds they have something else too, but what? What is the relation between mind and brain; between mental events and physiological or cerebral events? By drawing on empirical findings of psychophysicologists, Ziff argues against the view that mental events can be identified with cerebral events, but claims that this denial of identity does not necessarily result in a duality of entities or events. The two are two in conception. The problem is one of finding adequate translation functions for all mentalistic concepts.
- ZILBOORG, Gregory.** *Psychoanalysis And Religion*, Margaret Stone Zilboorg (ed). NY 1962.
- This book is a collection of eleven papers written over a twenty-year period, to show that psychoanalysis need not conflict with nor deprecate religious faith. The intent is to overcome "... the impression that Freud's atheism is an essential component of psychoanalysis. Few, if any, suspect that (it) might have been of purely personal origin."

- ZIMMERMAN, Marvin.** Is Free Will Incompatible With Determinism? *Phil Phenomenol Res* 26,415–420 Mr 66.
- If we maintain that free will requires the absence of determinism, then can we claim to be free without any wants? If we had no wants at all, what sense would there be to talk about free will? The difference between free will and the absence of free will is not that between indeterminism and determinism. Free choice presupposes determinism in that in order to make a choice an individual must have some motive or reason for so doing. The difference is found within determinism, among the different kinds of motives that can influence an individual to make a choice. Furthermore, if I already possess the motive to change or eliminate undesirable motives then I increase my opportunity to realize more desires and thus increase freedom of choice, even though my motive to change or eliminate undesirable motives is already predetermined.
- ZIMMERMAN, Marvin.** The Status Of The Verifiability Principle. *Phil Phenomenol Res* 22,334–343 Mr 62.
- It is usually held that the verifiability principle received a series of crushing blows in the form of powerful objections, from which it never recovered. The author disagrees, and suggests that it is more than a mere ghost that is left; on the contrary, it is argued that it is a living principle which can be successfully defended. Specifically, the article explores the usefulness of the above principle in making explicit that metaphysical statements are not verifiable in the sense in which empirical statements are, and are therefore not to be treated as if they were empirical.
- ZIMMERMAN, Robert L.** Can Anything Be An Aesthetic Object? *J Aes Art Crit* 25,177–186 Wint 66.
- ZIMMERMAN, Robert L.** Form, Content, And Categories In Art. *Phil Phenomenol Res* 25,169–179 D 64.
- Art is not concerned with "telling" something; it is concerned with "making" something. The artistic product is a new nonnatural entity, a formed unity of disparate parts; it is a victory of form over matter. It is argued that a work of art projects Being, as some being, and as novel and unique being. Hence, the proper stance before a work of art is complete alertness and receptivity to its being as such, its particularity, individuality and newness. The aesthetic emotion is ultimately metaphysical.

- ZUURDEEG, Willem F.** *An Analytical Philosophy Of Religion.* Nashville Abingdon Pr 1958.
- This work "is planned as a textbook in philosophy of religion" with the hope "that it will encourage a fruitful discussion between philosophers and theologians." The distinctive task of philosophy of religion is held to be the analysis of religious language. The author's standpoint is analytical in the tradition of logical positivism rather than contemporary Oxford linguistic analysis, but he is also concerned with themes in existentialism. For him, "analysis of the language situation is pretty close to analysis of the human situation." However, no attempt is made to synthesize these positions. Chapters are devoted to an analytic and existential interpretation of modern man's language powers and possibilities, as well as his mythic background. Philosophically, considerable reference is made to the ideas of Heidegger and Marcel; theologically, Protestant thought is selected for emphasis. A bibliography is included which contains a number of references to French and German sources.
- ZUURDEEG, Willem F.** *Man Before Chaos*, E C Swenson (ed). Nashville Abingdon Pr 1968.
- This posthumously published work, prepared from Zuurdeeg's manuscript by E C Swenson, is a proposal and partial defense of the thesis that philosophy is a cry for Being. It is maintained that every philosophical system either is such a cry, sometimes in disguise, or is a rejection of the existence and attainability of Being. Several philosophical systems, notably Plato's, are examined in support of this thesis. The period since Hume and Kant is described as that in which the rejection of the existence of Being is dominant.
- ZWEIG, Arnulf.** Some Consequences Of Professor Feigl's Views On Justification. *Phil Stud* 9,67-69 1958.
- H Feigl has made a distinction between practical and theoretical justification, a distinction which the author, while in general agreement with Feigl, raises some questions about. While being tolerant of alternative principles in ethical disagreement, Feigl holds stricter criteria for epistemological and metaphysical justification. The author argues that Feigl's theory, if it is to be consistent, must hold that theories of justification, like other theories, are constructed to meet needs and ends which can conceivably be diverse—a view which would extend tolerance of alternative principles beyond the domain of ethical justification.
